# New from Technicon... the Automated Reagin test for syphilis

COPYRIGHT © 1989 BY TECHNICON CORPORATION, ARDSLEY, NEW YORK

The Venereal Disease Research Laboratory, National Communicable Disease Center, and Technicon Corporation have developed the first automated flocculation test for syphilis. One hundred determinations per hour are performed on untreated plasma or serum samples (as small as 0.1 ml). The results have a 98% agreement with the VDRL Slide test, which is the most widely used manual technique. The results of the Automated Reagin test are easily read, and they may be kept as a permanent record. For further information, write Department Z, Technicon Corporation, Tarrytown, New York 10591.

## INFORMATION FOR CONTRIBUTORS

Manuscripts should be sent to

Dr. Harry M. Rose  
Journal of Immunology  
Columbia University  
College of Physicians and Surgeons  
630 West 168th Street  
New York, N. Y. 10032

If and when the manuscript is published, it will become the sole property of the journal and all copyright will be taken out in the name of The Williams & Wilkins Company, and all rights in copyright reserved to The Williams & Wilkins Company.

Authors will be charged \$45.00 per page for each page exceeding 6 per article.

Reprints must be ordered in advance. A form showing the cost of reprints, together with an order slip, is sent with the galley proof. No more than 1,000 reprints of any article may be purchased. The invoice for reprints will include any charge for excess pages.

### INSTRUCTIONS FOR PREPARATION OF MANUSCRIPT

The original and one carbon copy of the manuscript are required. The text and all other material, e.g., footnotes, acknowledgments, and references, must be typed in double space on only one side of 8½" x 11" paper of good quality.

A short title to be used as a running head should be typed alone on the first page. Type the complete title on the second page, and the authors' names and affiliations on the third page. *The format of the Journal must be followed in typing the text and the list of references.* All material to be set in a type size different from that of the text, such as tables, case histories, quotations, formulas, legends for figures and illustrations, foot-

notes, and references must be typed on separate pages. Legends should not be attached to or written on figures or illustrations. The position of tables and figures in the text may be indicated on the page margin.

Manuscripts that do not conform to these specifications may not be accepted, at the Editor's discretion.

*Illustrations.* Photographs of figures and other illustrative material should be on glossy paper; they must be clearly marked on the reverse with the number, author's name and orientation (top). Graphs should be in black ink on unlined or bluelined paper. If graphs exceed 9" x 12" in size, they must be accompanied by glossy photographic reproductions within that size.

*Communications.* Short papers may at the author's request be printed in the Communications section of the Journal. These papers must not exceed 3 printed pages in length, including summary, references, tables and figures. If accepted they will appear within 3 months of receipt by the Editor's office. Suitability for publication will be judged on the basis of timeliness, novelty and importance by the usual refereeing procedure. The author must bear the complete cost of publication, at the rate of \$45.00 per page.

*Electron micrographs and photomicrographs.* The reproduction of these illustrative materials can be improved by using 150-screen half tones and a better grade of paper. The additional cost depends on the number and kind of illustrations and may be as high as \$120.00 for a single page. The cost per page decreases as the number of pages increases. An estimate can be obtained when the manuscript is submitted for publication.

*Hanna:*

## SYMPOSIUM ON SUPPRESSION OF GRAFT REJECTION with emphasis on the cornea

This book was designed for the experienced researcher. It is meant as an outline to further studies, pointing out the many areas that, though explored, need further investigation. It will be useful also for scientists new to the field since summaries at the end of the presentations provide an excellent survey of what has been done up to the present.

**CONTENTS:** The pathologic anatomy of the corneal graft rejection (*Frank M. Polack*). The fate of cells in the transplant (*Calvin Hanna*). Immunosuppression: Symphony or sonata? (*Edward B. Hager*). The biologic mechanisms of allograft rejection (*William T. Kniker*). Studies on the heterotopic transplantation of cornea to skin (*Ali A. Khodadoust* and *Arthur M. Silverstein*). The pharmacology of immunosuppressant drugs and experimental models (*Louis Levy*). Studies on the pharmacology of an immunosuppressant, chloramphenicol (*Calvin Hanna* and *Orville G. Neufeld*). Induction of homograft tolerance without immunosuppressive agents (*Justin V. Schwind*). Present status of human renal transplantation (*William J. Flanigan* and *Masauki Hara*). A new concept of immunosuppression in hypersensitivity reactions and in transplantation immunity (*Robert A. Nelson, Jr.*). Immune responses in the cornea and their suppression with purine analogues (*Howard M. Leibowitz* and *James H. Elliott*). Some aspects of the corneal graft reaction and its control (*Prasanta K. Basu*). Experimental modification of corneal graft reactions (*Gilbert W. Cleasby*, *Robert G. Webster*, *Paris E. Royo* and *Nicholas J. Vincent*). Modification of the immune graft response by azathioprine (*Frank M. Polack*). Notes on nomenclature used in tissue transplantation (*Calvin Hanna*).

Edited by *Calvin Hanna, Ph.D.*, Associate Professor of Pharmacology, and Chairman of the Subcommittee on the Cornea, Visual Sciences Study Section, University of Arkansas Medical Center, Little Rock, Arkansas. A bound reprint from the August, 1966, issue of *Survey of Ophthalmology*. Symposium held November, 1965.

1967    170 pp.    57 figs.    \$7.00

## CONTENTS

- D. KEAST: The murine runtting syndrome and neoplasia
- I. J. FORBES: Analysis *in vitro* of tolerance
- D. SKALBA AND D. R. STANWORTH: The specificity of the reactions of rheumatoid factors with different conformational forms of  $\gamma$ G-globulins of various species of origin
- U. HADDING AND H. J. MÜLLER-EBERHARD: The ninth component of human complement: isolation, description and mode of action
- JEAN M. DOLBY AND D. E. DOLBY: The antibody activities of 19S and 7S fractions from rabbit antisera to *Bordetella pertusis*
- J. GOOSE AND A. M. J. N. BLAIR: Passive cutaneous anaphylaxis in the rat, induced with two homologous reagin-like antibody sera, and its specific inhibition with disodium cromoglycate
- E. L. JESKA: Mouse peritoneal exudate cell reactions to parasitic worms. I. Cell adhesion reactions
- J. G. HALL, MARILYN E. SMITH, P. A. EDWARDS AND K. V. SHOOTER: The low concentration of macroglobulin antibodies in peripheral lymph
- JUNE M. FISHER AND K. B. TAYLOR: The intracellular localization of Castle's intrinsic factor by an immunofluorescent technique using autoantibodies
- D. R. NASH, P. A. CRABBÉ AND J. F. HEREMANS: Sequential immunofluorescent staining: a simple and useful technique
- ELIZABETH C. MARCUSON AND I. M. ROITT: Transformation of rabbit lymphocytes by anti-allotype serum: ultrastructure of transformed cells and suppression of responding cells by foetal exposure to antiallotype serum
- BRIEF COMMUNICATIONS
- J. D. HAWKINS: A note on the use of formolized sheep red cells in the passive haemagglutination test for antisera to bovine serum albumin
- KAY FUKUHARA AND F. ALADJEM: The heterogeneity of the precipitating hapten R<sub>3</sub>'
