Another Meloy First...

A Self-Contained Electrophoresis Unit

for
Hepatitis Associated Antigen Screening by Counterelectrophoresis
Immunoelectrophoresis
Electroimmunodiffusion
Lipoprotein Electrophoresis
Any other Gel Electrophoresis

Automatic Timer
Set timer, forget it. When run is over, unit shuts itself off.

Indicator Light
Tells if power supply is on.

Polarity Reversal
Changes current direction, permits reuse of buffer.

Flexible Capacity
Run 12 microscope slides or 3 lantern slides.

Optimum Wicking Arrangement
Allows runs at higher voltages without excess heating.

Grooved Ridge
Prevents drying out of plates during run.

BUT THAT'S NOT ALL: The Model EP-1 is extremely compact and totally self-contained. The power supply is part of the unit which means there are no loose cords or wires. It weighs less than 13 lbs., takes up approximately one square foot of bench space. It's all solid state for true dependability. And its optimum baffle design insures proper control of buffer pH. With all these features, the Model EP-1 sells for just $385.00. Complete. Send for our new Electrophoresis folder.

For the determination of ASTO...

Make your choice the world-accepted reagent

Bacto - Streptolysin O Reagent and Bacto - Asto Standard

These are the only ASTO reagents manufactured by a commercial supplier using the original Todd Serum and World Health Organization Standard. They provide the most accurate and widely used test available today. Quantitative, specific, desiccated for long shelf life and readily available. Write for literature 0151, Box 1058A Detroit MI 48232
