INFORMATION FOR CONTRIBUTORS

Manuscripts should be sent to

Dr. Joseph D. Feldman
Department of Experimental Pathology
Scripps Clinic and Research Foundation
La Jolla, California 92037

If and when the manuscript is published, it will become the sole property of the Journal and all copyright will be taken out in the name of The Williams & Wilkins Company, and all rights in copyright reserved to The Williams & Wilkins Company.

Contributions may be short or long; the length should be commensurate with the scientific content. The chief criteria for acceptance are quality, originality and clarity.

INSTRUCTIONS FOR PREPARATION OF MANUSCRIPT

The original and two (2) copies of the manuscript, including references, legends, figures and illustrations, should be submitted. The text and all other material, e.g., footnotes, references, acknowledgments, must be typed in double space on one side of 8½" X 11" paper of good quality. The two (2) copies may be legible carbon, mimeographed or xerox copies.

A short title to be used as a running head should be typed alone on the first page. Type the complete title on the second page, and the authors' full names (first name, middle initial(s), surname) and affiliations on the third page. The format of the Journal must be followed in typing the text and the list of references. All material to be set in a type size different from that of the text, such as tables, case histories, quotations, formulas, legends for figures and illustrations, footnotes, and references must be typed on separate pages. Legends should not be attached to or written on figures or illustrations. The position of tables and figures in the text may be indicated on the page margin.

Manuscripts that do not conform to these specifications may not be accepted, at the Editor's discretion.

Illustrations and Photomicrographs. Photographs of figures and other illustrative material should be on glossy paper; they must be clearly marked on the reverse side with the number, author's name and orientation (top). Graphs should be in black ink on unlined or bluelined paper. If graphs exceed 9" X 12" in size, they must be accompanied by glossy photographic reproductions within that size.

For photomicrographs a better grade of paper may be used at additional cost, up to $75.00 for a single page. Estimates can be obtained when the manuscript is submitted for publication.

Communications. Short papers, at the author's request, may be printed in the Communications section of the Journal. These papers must not exceed three (3) printed pages in length, including summary, references, tables and figures. The text of a full printed page contains about 800 words. If accepted, their publication will be accelerated, usually within three (3) months of receipt by the Editor's office. For this reason, proofs are not sent to authors, but rather to the office of the Editor. Suitability for publication will be judged on the basis of timeliness, novelty and importance by the usual refereeing procedure. The author must bear the complete cost of publication, at the rate of $58.00 per page.

Page Charges. Authors will be charged $58.00 per page for each page exceeding six (6) per article and $58.00 per page for each page of a Communication.

Reprints. Reprints must be ordered in advance. A form showing the cost of reprints, together with an order slip, is sent with the galley proof. No more than 1,000 reprints of any article may be purchased. The invoice for reprints will include any charge for excess pages.
Two major new works from Harper & Row:

INFECTIOUS DISEASES
A Guide to the Understanding and Management of Infectious Processes

With 89 Contributors. Edited by Paul D. Hoeprich, M.D., Professor of Medicine and Pathology, and Chief, Section of Infectious and Immunologic Diseases, School of Medicine, University of California, Davis, California. About 1,300 Pages. 180 Illustrations, 53 in full color. $42.50

INFECTIOUS DISEASES has been painstakingly prepared to serve as a definitive reference book for all physicians concerned with infectious diseases. Comprehensive in scope, the book covers diseases caused by viruses, chlamydia, rickettsia, mycoplasmas, bacteria, spirochetes, protozoa, helminths, and ectoparasites. Each disease is thoroughly examined according to etiology, epidemiology, pathogenesis and pathology, manifestations, diagnosis, prognosis, therapy, and prevention. Considerable emphasis is placed on epidemiology and pathogenesis as the keys to understanding host-parasite interactions.

Although comprehensive, this book is not just an encyclopedic assemblage of data. In fact, the real hallmark of INFECTIOUS DISEASES is the organ-system presentation of the subject matter. Specific infectious disease are approached according to the system involved. This practical approach is consistent with the facts of clinical life. Moreover, the organ-system arrangement facilitates quick reference for the busy practitioner.

Comprehensive, well organized, generously illustrated, and fully indexed, this important new work fills a real need for students and practicing physicians alike.

BRONCHOPULMONARY DISEASES AND RELATED DISORDERS

With 54 Contributors. Edited by Cranston W. Holman, M.D., Clinical Professor of Surgery, Cornell University Medical College; and Carl Muschenheim, M.D., Clinical Professor of Medicine, Cornell University Medical College, New York. 2 Volumes. About 1,035 Pages. 477 Illustrations. $60.00

The field of bronchopulmonary diseases has recently undergone an unique evolution of medical and surgical collaboration. BRONCHOPULMONARY DISEASES AND RELATED DISORDERS is a new profusely illustrated two volume work which assembles the vast amount of accumulated medical and surgical knowledge in a logical, consistent sequence. Up-to-date information from fifty-four distinguished contributors has been organized to form a comprehensive presentation of current theory and practice concerning pulmonary and thoracic diseases.

Pertinent physiologic principles, medical knowledge, and surgical interests are thoroughly examined. Topics of particular importance include: pulmonary function tests and their physiologic significance; surgical principles and technics, amplified by detailed anatomical illustrations; developmental anomalies and pulmonary disorders of infancy and early childhood; pathology and patho-physiology of various disorders; principles for the management of respiratory failure; medical and surgical intensive care.

CLINICAL IMMUNO BIOLOGY Volume 1

Edited by FRITZ H. BACH, Department of Pathology, Pediatrics, and Microbiology, Univ. of Wisconsin Medical School, Madison, and ROBERT A. GOOD, Department of Medical Genetics and Surgery Univ. of Minnesota Medical School, Minneapolis

Volume 1 offers an introduction to the basic principles of modern immunology for practicing physicians and graduated students in medicine and the biomedical sciences. Here are compact review articles, written by leading authorities, which range across the spectrum of modern immunology, from the structural and functional aspects of the development of the immune system to such fundamental concerns as tolerance, inflammation, the allergic response, and transplantation immunology.

1972, 310 pp., $13.00

IMMUNITY TO ANIMAL PARASITES

Edited by E. J. SOULSBY, Department of Pathobiology School of Veterinary Medicine, Univ. of Pennsylvania, Philadelphia

This book deals comprehensively, yet concisely, and in an interpretive manner, with the immune responses to parasitic infections, and how they related to the important helminth, arthropod, and protozoal parasitisms of man and his domesticated animals. The first part of the volume covers the basic aspects of immunology in parasitic infections and includes comprehensive accounts of the immunoglobulins of man and domesticated animals, the immune response of the fowl, the occurrence of cell-mediated immunity, and immediate hypersensitivity phenomena in parasitic infections and the in vitro and in vivo manifestations of these. The second part provides definitive and interpretive reviews of the role of immunological phenomena in the biology of the important parasitisms of man and domesticated animals. It includes essays on trypanosomes, Leishmania, Babesia, Coccidia, gastrointestinal nematodes, metacestodes, Larval nematodes, and parasitic arthropods.

1972, 448 pp., $23.50

TRANSPLANTATION ANTIGENS:
MARKERS OF BIOLOGIC INDIVIDUALITY

By BARRY K. KAHN, Mass. General Hospital, Boston, Mass., and RALPH A. REISFELD, Scripps Clinic and Research Foundation, La Jolla, Cal.

This volume synthesizes the available information on the ontology, phylogeny, cell and tissue distribution, cross reactivities, and biologic characterization of transplantation antigens—emphasizing the properties of materials solubilized from cell membrane surfaces. Thus, the book deals with one of the principal hopes of clinical transplantation, since specific manipulation of the antigens could abort a host's rejection mechanisms. In addition, it describes a tool for attacking fundamental problems of biological individuality: chemical analysis of antigens has shown that the specificity is determined by primary protein structure.

November 1972, about 580 pp., $26.50

THE JOURNAL OF IMMUNOLOGY®

Information for Subscribers

Published monthly, beginning January, 1929. (From the 1916-1925, and in 1928 Volumes I-X inclusive, and Vol. XV published bi-monthly.)

The subscription price is $48.00 per year in U.S.A.; $51.00 elsewhere. Single copies, when available, are $3.00 in U.S.A.; $5.25 elsewhere. The subscriptions of members of the American Association of Immunologists are included in the membership dues and are handled by the Association's Treasurer, Dr. Henry Metzger, American Association of Immunologists, 9650 Rockville Pike, Bethesda, Md. 20014. All other subscriptions should be sent to the publishers.

Change of address: Publisher must be notified 60 days in advance. Journals undeliverable because of incorrect address will be destroyed. Duplicates can be obtained (if available) from the publisher at the regular price of single issues.

New subscriptions and renewals are entered to begin with the January or July issue.

Subscriptions should be renewed promptly: To avoid a break in your series, subscriptions should be renewed promptly. The publishers cannot guarantee to supply back issues on belated renewals.

Microfilm. For availability, inquire of The Williams & Wilkins Company.

Reprints of individual articles are available only from authors.

Advanced Immunoochemistry

By EUGENE D. DAY, Ph.D.,
Professor of Immunology and
Director of Graduate Studies,
Department of Microbiology and Immunology,
School of Medicine, Duke University,
Durham, North Carolina

An excellent ancillary text for advanced bioscience majors, this book provides in-depth treatment of the entire field of immunochemistry, a field that has reached a plateau after five years of active development. This monograph is a good summation of these latest advancements and includes an abundance of documented statements and extensive references. A must for immunochemists, microbiologists, biochemists and internists.

CONTENTS BY SECTION:
The Light Chains of Immunoglobulins; The Heavy Chains of Immunoglobulins; The Sizes and Shapes of the Immunoglobulins; The Antibody Binding Site; Affinity and the Law of Mass Action; Derivations of the Affinity Equations for an Ideal Reaction; Antibody Reactions with Haptens; Antibody Reactions with Multivalent Antigens—The Virus Model; Antibody Reactions with Multivalent Antigens—Precipitation Reactions; The Active Centers of Multivalent Antigens; Affinity and the Immune Responses; Index.

1972/approx. 450 pp./150 figs./$19.00
