introductory
human antiserum kit . . . $55.00

2ml OF EACH

Anti-Human IgA
Anti-Human IgG
Anti-Human IgM
Anti-Human Immunoglobulins (IgA + IgG + IgM)
Anti-Human Serum

CONTROLS INCLUDED

Human Fraction Rich in IgA (no IgG, no IgM)
Human Fraction Rich in IgG (no IgA, no IgM)
Human Fraction Rich in IgM (no IgA, no IgG)
Human Serum

Complete with Protocols showing Immunoelectrophoretic Patterns and Antibody Proteins

ALSO AVAILABLE

Antiserums to many other Human and Animal Proteins

Specialists in Fluorescein, Rhodamine, Ferritin and Peroxidase Conjugations.

RIA specimen processing...a set-it, forget-it matter

You're seeing what happens when you press the START button of the new Micromedic Automated Pipetting Station (we call it the APS). Automatically, the APS completes a full pipetting cycle. And it does it every eight seconds, 450 times an hour. In fact, the APS will automatically do sample dilutions and reagent additions hour after hour. Repetitively. Precisely. Without boredom, without fatigue.

Volume? From 2 microliters to 5 milliliters.

Repeatability? The APS coefficient of variation is better than 0.5%.

Speed? The APS dilutes up to 450 samples per hour and dispenses up to 900 per hour. And if that isn't fast enough, we have another model that's even speedier.

Discover what automated pipetting can mean to your RIA processing. Call Micromedic Systems at (215) 592-2401. Or return this coupon.
From test tubes to answers! Nuclear-Chicago offers you the only complete on-line radioimmunoassay systems.

Only our automatic-instrument systems will take your RIA/CPB tests from samples to final data. Nuclear-Chicago Liquid Scintillation and Automatic Gamma Counters offer unprecedented speed and convenience in data-reduction. Both our beta and gamma spectrometer systems are linked with our RIA/CPB Data Processor. These systems analyze samples and print out the results immediately. Complete data (including count rate, normalized percent bound, standard deviation, dose, corrected dose, and confidence range) are printed for each sample group, giving you meaningful and useful results. All you do is load your standards and samples, establish assay protocol with the processor, start the system, and retrieve the final, printed readout. Our systems do all the rest!

Right now, some 20 RIA tests are routinely performed in clinical medicine. Many more tests have been developed in the research lab, and before long many of these will also become common clinical procedures. Can you read the handwriting on the wall? It plainly spells “Nuclear-Chicago” to people who plan ahead. Write for our free brochure, RIA/CPB Data Systems.

THE MACROPHAGE
B. VERNON-ROBERTS

In recent years increasing attention has been focused on the macrophages as participants in cell-mediated immunological reactions and antibody production. This monograph provides an account of present knowledge of the life history of the macrophage and presents the evidence for its role in various physiological and pathological processes. $21.00

Which?

Ion Exchanger • Column • Gradient Mixer

SEPHADEX® ION-EXCHANGERS
Two anion exchangers and two cation exchangers cover the whole range pH 2—12. High capacities for proteins, polynucleotides and other biopolymers MW 1000—200,000 are ensured as each ion-exchanger type is available in two porosities. 1 gram protein can be fractionated on a 30 ml bed of DEAE-Sephadex A-50 using only 10 % of its available capacity.

PHARMACIA COLUMNS
Fast separations using columns of the K15 and K16 series exploit to the full the high capacities and superior resolution of Sephadex ion-exchangers. Columns K 16/20 and K 15/30 are particularly suitable for bed volumes up to 40 or 50 ml. Thermostat jacket and flow control valve are standard on the K16 columns.

PHARMACIA GRADIENT MIXER GM-1
The prime requirement for the production of linear ionic strength gradients is efficient mixing of the components of the gradient. In the Pharmacia Gradient Mixer GM-1 this is achieved by a blade configuration which lifts the dense incoming solution from the bottom of the mixing chamber and distributes it evenly throughout the whole eluant at a low stirring speed. Gradients in aqueous and most organic solvents can be formed with the GM-1.

Used together, Sephadex ion-exchangers and apparatus from Pharmacia Fine Chemicals provide practical chromatographic systems capable of the highest resolution in the ion-exchange chromatography of biopolymers.

THE COMPUTERIZED DICTIONARY

It's the best
because it best defines
the medicine that you practice

The new edition contains:
• 7,199 significant new vocabulary entries
• 24,877 important editorial revisions
• excellent color plates and illustrations
• an alphabetical index to subentries
• appendices, tables, eponyms, and synonyms
• a special section to help you get the most from your dictionary

Beautifully bound and thumb-indexed for easy use, the new Stedman’s will be the most valuable addition to your library in years.

1972/1,620 pages/$18.50

THE WILLIAMS AND WILKINS COMPANY 428 E. Preston Street Baltimore, Maryland 21202
introducing
IMMUNO-TEC™ IEP KIT

the more complete,
more convenient method
for qualitative serum
protein identification

because...
Behring Diagnostics antisera provide you with greater specificity, greater sensitivity—because they are obtained by immunizing select animals with highly purified human proteins, followed by absorption of nonspecific antibodies. This reduces the possibility of cross reactivity.

The polyvalent anti-human serum contains antibodies to approximately thirty proteins found in normal human serum.

The monospecific antisera enable you to detect IgG, IgA and IgM gammopathies. Also Bence-Jones proteins can be recognized by their reaction with anti-IgG serum specific for H and L chains—an immunological determination available only with antisera from Behring Diagnostics.

With 80 years experience, Behring Diagnostics is able to provide you with the widest range of antisera available—all produced under the same exacting standards—affording you reliable, reproducible results.
More of your lab work can be simpler when you look to Behring Diagnostics

**IMMUNO-TEC**™ **IEP KIT**

the complete little package

- Reliable, readable, reproducible results
- Superior quality antisera
- Unique crystal-clear, rehydratable MCI-IEP Film
- Fits most standard electrophoresis units
- Stable when refrigerated (4°-8°) for up to one year
- Economical, time saving
- A permanent record

Behring Diagnostics traces its history back to Emil von Behring, whose outstanding work in immunology earned him the first Nobel Prize awarded in medicine. We acknowledge our responsibility to a heritage of nearly eight decades of research and service in all fields of health and medicine.

-the company with a history...and a future

We've put γ RIA up on the bench and down in price.

Now, the fastest growing analytical technique comes in new space-saving packages: Beckman's pair of 200-sample Gamma Counting Systems, both extremely easy to operate. Bench-size, these are the most compact, lowest priced automatic gamma counting systems available today. Yet they do the same jobs as instruments almost three times their size and twice as costly.

You get a counting chamber that's above, not below, the sample changer. Which means better shielding and less possibility of contamination. However, should contamination occur, our replaceable, throwaway chamber liner is quick and easy to change.

There's a top-loading "express lane," too, for manual counting of single samples without interrupting the automatic sample-number sequence.

Our Radioimmuno Analyzer with teletypewriter has single-channel operation with plug-in Iso-Set's. And it can be upgraded to match our Biogamma™, which, in addition, features three-channel operation and a visual energy display.

Get the facts on these new gamma systems, which join Beckman's existing line of beta systems to give full RIA capability. Write for Data File 412, Scientific Instruments Division, 2500 Harbor Blvd., Fullerton, Calif. 92634. And ask to be put on the mailing list of our new Radioimmunoassay Center—you'll regularly receive important, up-to-date RIA literature and other information.
Smooth and Easy

Bacto - VDRL Antigen
Bacto - Syphilitic Serum 4 Plus

Uniformly smooth for easy dependable reading. Complete line of syphilitic serological antigens and control sera available. Consistently reproducible results. Write for literature number 0208, 0278 and 2393.
