"By presenting up-to-date material in the field of hematology and by bringing relevant developments in related fields to the attention of the hematologist, they render the invaluable and much-appreciated service of preventing us from becoming obsolete."
—AM. J. CLIN. PATHOL. (of previous volumes)

PROGRESS IN HEMATOLOGY

Volume VIII

Edited by Elmer B. Brown, M.D.

As in past volumes of this series, the purpose of this edition is to provide timely, authoritative reviews in varied disciplines of interest to the hematologist. Separate chapters deal with: ion and water movements in red blood cells, specific antiglobulin reagents in autoimmune hemolytic anemias, measurements of hemolysis in hemolytic anemia due to immune reactions, acquired disorders of hemoglobin, dyserythropoiesis and dyserythropoietic anemias, hereditary disorders of the red cell in animals, the role of cyanate in sickling, immunologic properties of antihemophilic factor, prophylaxis and home management of hemophilia, prostaglandins in blood, the regulation myelopoiesis, human bone marrow transplantation.

December 1973 384 pp. 70 illus. $22.50

Volumes IV, V, VI, VII, co-edited with Carl V. Moore, M.D.
Volume III edited by L. Tocantins, M.D.
