The Horseradish Sandwich

Rabbit-PAP (peroxidase anti-peroxidase) is a soluble antigen-antibody complex composed of horseradish peroxidase (HRP) bound to rabbit antibodies to HRP. When used in a three-layer configuration ("triple sandwich") with suitable monospecific immunochemical reagents, PAP has been shown to be a highly sensitive general purpose staining reagent for detection of antigens or antibody in test systems using electron or light microscopy. For applications in immunocytochemistry and immunoassays, PAP offers the advantages of low background, extremely high sensitivity and permanent staining. Bionetics Laboratory Products has developed a rabbit-PAP that is formulated to deliver the full potential of PAP in your test system.

LOW BACKGROUND. The PAP methodology uses a "triple sandwich" procedure which minimizes background staining by blocking possible non-specific sites while favoring amplification reactions at the specific site.

SENSITIVITY. Enzyme amplification coupled with low background results in a high "signal to noise" ratio and greatly increases sensitivity. In light microscopy sensitivity comparable to that of RIA has been reported.

PERMANENT STAINING. Because the PAP procedure involves an amplification mechanism and produces a stain detectable by standard light microscopy, it does not require the use of a fluorescence microscope, nor is it subject to degradation by temperature and/or light exposure. Unlike the FA technique, the stain is easily preserved for viewing as well as photomicrography.

POTENTIAL USES. In addition to its potential as a general indicator stain for light and electron microscopy, PAP can be used in quantitative assays and highly discriminatory visual determination of the specificity of antisera. This reagent system is now beginning to impact immunological investigations. PAP staining technology will provide new avenues for the study of the immune system, viral oncology and autoimmune disease.

Bionetics Laboratory Products offers rabbit-PAP and allied reagents in convenient, economical aliquots. If you are presently working with PAP, we invite you to try ours. Write or call us for a sample aliquot. If you have not used PAP staining before, we would be happy to provide additional information and a list of references.

The Solution
for *in vitro* lymphocyte isolation

Ficoll-Paque™

Ficoll-Paque is a sterile solution of Ficoll 400 and diatrizoate sodium (density 1.077 ± 0.001 g/cc). Available in bottles with a rubber septum closure to facilitate sterile handling and in a convenient pack size (6 × 100 ml). For further details see our booklet available on request.
FLUORESCINE CONJUGATED HUMAN ANTISERUM KIT (Lyophilized) . . . $110.00

$161.00 value if components are individually ordered

2 ml of EACH
Fluorescein Conjugated Anti-Human IgA
Fluorescein Conjugated Anti-Human IgG
Fluorescein Conjugated Anti-Human IgM
Fluorescein Conjugated Anti-Human Immunoglobulins
(IgA + IgG + IgM + Kappa + Lambda)

0.5 ml CONTROLS INCLUDED
Human Fraction rich in IgA (no IgG, no IgM)
Human Fraction rich in IgG (no IgA, no IgM)
Human Fraction rich in IgM (no IgA, no IgG)

Complete with Protocols showing Immunelectrophoretic Patterns and Antibody Proteins.

All Fluorescein Conjugates are made from the IgG Fraction of potent antiseraums. These products are concentrates. The working solution is determined by the investigator.

ALSO AVAILABLE
Antiserums to many other Human and Animal Proteins

Specialists in Fluorescein, Rhodamine, Ferritin, Peroxidase and Custom Conjugations.

The extensive NYEGAARD product line for centrifugation studies is now available in the USA from ACCURATE.

Featuring:
- Zonal centrifugation
- Isopycnic banding
- Density gradient centrifugation
- Low-speed centrifugation
- Sedimentation/flotation at low g.

For isolation of leukocytes, thrombocytes, and whole cells by rotation and gradient centrifugation. Available as 32.8% (0.100 g/ml) and 75% solution of SODIUM METRIZOATE.

For discontinuous and linear gradients in the isolation of bacteria, bacterial spores, viruses, spermatozoa as well as subcellular organelles. Available as 76% (containing 10% sodium salt) solution of MEGLUMINE METRIZOATE.

Lymphoprep for preparation of pure lymphocyte suspensions in tissue typing, anti-lymphocyte sera production and immunological research. A ready-made mixture of SODIUM METRIZOATE and FICOLL® with density 1.077± 0.001 g/ml.

*From Pharmacia Fine Chemicals.

Metrizamide is a non-ionic, inert and easily water soluble compound forming dense solutions of low viscosity. For gradient isolation of cells, viruses, ...
they’re so good,

We’re not strong on giveaways—it’s against our comptroller’s nature. But these new precision-molded disposables in our Costar line have so many innovations, we’ve convinced him we can make an eager customer out of anyone who tries them. Especially you.

The extensive NYEGAARD product line for centrifugation studies is now available in the USA from ACCURATE.

Featuring:
- Zonal centrifugation
- Isopycnic banding

Metrizamide

A non-ionic, inert and easily water soluble compound forming dense solutions of low viscosity. For gradient isolation of cells, viruses, etc.

The shipping tray may be used as a filling rack by pressing the tubes into the round recesses in the base.

Tubes are placed back in the tray for incubation.

two, disposable Leighton tubes

- Exceptional optical clarity and dimensional accuracy
- Radiation sterilization (no ethylene oxide residue)
- Frosted labeling surface
- Cover slip treated for optimal cell growth
- Special polymer suitable for fixation and staining
- And more (we’ll send complete information)
they're free.

one, disposable 25cm² tissue culture flask

- Triangular shape and widest neck opening in a 25cm² flask give a 10ml pipette easier access
- Optically clear, dimensionally precise, strong
- Treated surface for optimal cell growth
- Frosted labeling area
- Radiation sterilization (no ethylene oxide residue)
- And more (Now it's time to fill out the coupon)

Three for free (for now).
Dear Costar:
I agree that your comptroller knows nothing about selling. Send me my free disposables.

This is a new P.A.G.E.

Pharmacia Gel Electrophoresis System
for polyacrylamide gradient electrophoresis
and other P.A.G.E. techniques

The complete system
Full capabilities for the new pore gradient electrophoresis technique, two dimensional studies, gel rod electrophoresis.

Polyacrylamide gradient gels PAA 4/30
Convenient ready-to-use gradient gel slabs give extreme resolution over the whole range 50,000--2 million MW. Self-limiting migration concentrates the zones after separation by molecular size.

Gel electrophoresis apparatus GE-4
4 gel slabs, 12 samples on each, or 16 gel rod capacity. Robust moulded construction with built-in cooling system. Full range of accessories for all applications.

Electrophoresis power supply EPS 500/400
Compact, all solid state. 0--400 mA constant current, 0--500 V constant voltage with automatic cross-over. Maximum effect 60 W. Full personnel and instrument protection.

Gel destainer GD-4
Electrophoretic or diffusion destaining of slabs or rods in a single operation. Twin cells. Active dye removal and solvent circulation. Results can be inspected at any time.

Destainer power supply DPS
Compact, reliable, all solid state. Push-button selected constant voltages 12, 24, or 36 V. Timer controls electrophoretic destaining up to 90 minutes.

SIGMA is pleased to announce an expanding series of CANINE PRODUCTS for your research.

**ALBUMIN**, Canine Serum:
- Fraction V Powder:
  - 100 mg $3.25
  - 1 g $20.00

**CYTOCHROME C**, Canine Heart:
- 95-100% based on Mol. Wt. 12,241.
  - Approx. 5% is in the reduced form.
  - 5 mg $11.00
  - 100 mg $100.00

**FIBRINOGEN**, Canine Serum:
- Approx. 55% Protein (over 60% of Protein clottable).
  - Contains Approx. 40% Buffer Salts.
  - 100 mg $3.75
  - 5 g $93.00

**HEMOGLOBIN**, Canine:
- Crystallized, Dialyzed and Lyophilized.
  - 250 mg $3.25
  - 500 mg $5.40
  - 5 g $37.50

**CARBONIC ANHYDRASE**, Canine Erythrocytes:
- Dialyzed and Lyophilized.
  - Approx. 200 W-A units per mg Protein (Biuret).
  - 1 mg $6.75
  - 25 mg $75.00

**CATALASE**, Canine Liver:
- Ammonium Sulfate Suspension.
  - 900-1000 units per mg Protein (Biuret).
  - 50 mg $5.40
  - 1 g $50.00

**PYRUVATE KINASE**, Canine Muscle:
- Crystalline Ammonium Sulfate Suspension.
  - 350-500 units per mg Protein (Biuret).
  - 1 mg $9.00
  - 25 mg $100.00

**PHOSPHATASE, ALKALINE**, Canine Intestinal Mucosa:
- Crude. Dialyzed and Lyophilized.
  - 1-3 units per mg Protein (Biuret).
  - 100 mg $7.25
  - 5 g $175.00

**LACTIC DEHYDROGENASE**, Canine Muscle:
- Ammonium Sulfate Suspension.
  - Approx. 400 units per mg Protein (Biuret).
  - 1 mg $9.00
  - 5 mg $30.00
  - 25 mg $100.00

**ACETONE POWDERS**

**BRAIN ACETONE POWDER**, Canine:
- 250 mg $5.40
- 5 g $50.00

**HEART ACETONE POWDER**, Canine:
- 1 g $8.00
- 10 g $46.00

**KIDNEY ACETONE POWDER**, Canine:
- 1 g $7.00
- 10 g $40.00

**L-α-PHOSPHATIDYL ETHANOLAMINE**, Canine Brain:
- Practical Grade, Approx. 60%.
  - 100 mg $2.00
  - 500 mg $5.40
  - 5 g $43.00

**ADENOSINE DEAMINASE**, GLYCOGEN, MUCIN

**SPLENIC DECARBOXYLASE**, CANINE SERUM:
- Crystallized, Dialyzed and Lyophilized.
  - 250 mg $3.25
  - 500 mg $5.40
  - 5 g $37.50

The following additional CANINE Preparations will probably be available soon:

THE JOURNAL OF IMMUNOLOGY

MEET YOUR MAKER.

We may not be able to tell you the meaning of life, but we can tell you all you want to know about the lives of every biochemical that comes from Miles Research Products; because we made them. For example, if our enzyme is losing activity in your lab, we can give you the advice and assistance you need to keep it alive and well and working for you.

Or, if you're having trouble locating cleavage sites with our restriction nucleases, we can help you find them.

We can't do your experiment for you, but we can tell you what you want to know about our biochemicals. Our number is 219-264-8846. There is a human being on the other end who wants to help you. Call him and be saved.
Workers in lipid or membrane research are becoming aware of liposomes as an important new tool. Formed spontaneously in certain lecithin-cholesterol solutions, liposomes are tight globular masses, many layers thick, that resemble membrane structures. Aqueous channels between the layers are widened by the mutually repellent action of electrically charged molecules introduced into the layers. The channels trap whatever ionic species was dissolved in the aqueous phase at their formation. Removal of any untrapped ions or markers by dialysis or gel filtration allows measuring the rate of leakage of sequestered ions. Studies indicate liposomes are entirely analogous to cells and organelles in regard to ion flux. Also, liposomes are used to determine the modes of action of toxins, drugs, hormones and anaesthetics. Recently it was shown that lysosomes will take up some 50 times as much of an enzyme when it is trapped in liposomes than when it is "free".

Each of the exclusive new Gibco kits makes enough liposomes for a limited period of work. The ingredients are supplied in sealed ampoules in exactly the proper proportions. There is no waste. One kit forms positively charged liposomes, one negative.

**Positive Liposome Kit (POSL)**
Catalog No. 800200
Reagent Content:
- egg lecithin 63μmoles
- stearylamine 18μmoles
- cholesterol 9μmoles

**Negative Liposome Kit (NEGL)**
Catalog No. 800300
Reagent Content:
- egg lecithin 63μmoles
- dicetyl phosphate 18μmoles
- cholesterol 9μmoles

**HYDROGENATED EGG LECITHIN PRICE REDUCED TO $45.00 PER GRAM**

Remarkable price reduction made possible by new batching process. Defined highest purity assured by thin-layer chromatography analysis. Suggested uses: as a lecithin standard, as a substrate for the enzymes phospholipase A₁, A₂, C, and D.

**DEFINED-PURITY PHOSPHOLIPIDS**

The Gibco catalogue lists 24 defined-purity phospholipids of absolutely unsurpassed quality. Detailed specifications are given. Also listed are 13 phospholipids of lesser pedigree, plus seven Coenzyme A derivatives of saturated and unsaturated fatty acids. Ask for your catalogue today.

**THESE PRODUCTS ARE FOR INVESTIGATIVE PURPOSES ONLY—NOT FOR IN VITRO DIAGNOSTIC USE.**
