Antisera to Human Plasma Proteins

Example of specific reactivity with Bionetics antisera to human plasma proteins.

The Bionetics antisera react only with normal human serum (NHS). No extraneous human serum components are added to the specific immune sera.

- IgA(α)
- IgG(γ)
- IgM(μ)
- IgA + IgG + IgM(H + L Chains)
- IgG(H + L Chains)
- C3
- C4
- Albumin
- Fibrinogen
- α1-Antitrypsin
- α2-Macroglobulin
- α-Lipoprotein
- β-Lipoprotein
- Transferrin
- Haptoglobin
- Hemopexin
- Ceruloplasmin
- α-Acid Glycoprotein

Other commercial antisera demonstrate the presence of extraneous human serum components and soluble immunoadsorbants.

The above representative commercial antisera react with added NHS components and also with goat anti-human serum (GACHu).

The advantage to you?

Your AGD and IEP research experiments need not be limited to only one antiserum per plate or pattern. Several interrelationships can be studied without the confusion of multiple insignificant precipitin lines between wells.

The Solution for *in vitro* lymphocyte isolation

Ficoll-Paque™

Ficoll-Paque is a sterile solution of Ficoll 400 and diatrizoate sodium (density $1.077 \pm 0.001$ g/cc). Available in bottles with a rubber septum closure to facilitate sterile handling and in a convenient pack size ($6 \times 100$ ml). For further details see our booklet available on request.
LOW-TOX RABBIT COMPLEMENT
FOR USE WITH MOUSE LYMPHOCYTES

★ Minimal toxicity to mouse lymphocytes - including thymocytes
★ High complement activity
★ Lyophilized to insure long shelf life

Cedarlane Low-Tox Rabbit Complement is designed specifically for use with alloantisera and heteroantisera directed against antigens on mouse lymphocytes. Natural toxicity to mouse lymphocytes is removed by absorption with agarose and mouse tissues. Each batch is thoroughly tested for low toxicity and high activity, and can be used without further processing.

PRESENTATION: 5 x 1 ml, lyophilized
PRICE: $30.00

ANTI-MOUSE T-CELL SERUM

CYTOTOXIC TO:
★ 100% of thymus cells
★ Less than 5% of bone marrow lymphocytes
★ 25-30% of nucleated spleen cells (with a clear plateau)

Cedarlane Anti-Mouse T-Cell Serum is a rabbit anti-mouse brain-associated thymic antigen. The antiserum is thoroughly absorbed to remove cross-reactivity against B-lymphocytes and, when tested in the presence of an appropriate source of complement, demonstrates the stated cytotoxic properties.

PRESENTATION: 1 ml, lyophilized - $ 25.00
5 ml, lyophilized - $100.00

The class menagerie.

Cultured Creatures are in a class by themselves. They have special needs that can be uniquely satisfied by disposable plastic tissue culture labware from our Linbro Scientific subsidiary.

We say unique because there is something our Linbro plates have that no one else has. The Linbro plates are performance tested for cell growth by the Cell Raisers at Flow Laboratories. And that means a lot.

We are the number one supplier of cell cultures. In all the years we've been raising cells, we've learned a lot about what it takes to grow cells — and grow cells in. That's something you should remember because Flow Laboratories and our Linbro Scientific subsidiary, is the only company that produces its own lines of disposable tissue culture labware and cell cultures.

The Linbro plates are available with 4, 6, 24, or 96 wells. The 6 and 24 well plates have convenient ribbed finger tabs that facilitate the handling of the plate and allows the plate cover only to be replaced in its original position.

So, when you buy Linbro Scientific, you are buying Flow Laboratories cell raising experience.

Lux disposable tissue culture plastic labware is also available from Flow Laboratories.

If it doesn’t say Flow Laboratories, it’s not a Cell Raiser product.

![THE JOURNAL OF IMMUNOLOGY](image)

**UNDER ONE COVER**

A comprehensive study of the latest research and clinical information on immunodeficiency states associated with human cancer

New 2nd Edition!

**THE IMMUNOLOGY OF MALIGNANT DISEASE**

The new edition of this extensively updated and expanded reference offers you current, practical insights on emerging ideas and methods that will have increasing relevance to the treatment of cancer in man. The authors present a wealth of information about immunodeficiency states associated with human cancer, similar knowledge from the study of animal neoplasia, and the latest information pertaining to human immunobiology. New data on immunotherapy is especially noteworthy.

**ALSO OF INTEREST:**

**BASIC IMMUNOLOGY AND ITS MEDICAL APPLICATION.**
By James T. Barrett. This up-to-date new book concisely covers immunology and illustrates, by case histories and clinical correlations, how this information applies to the solution of medical problems. Topics include: serologic reactions, immunohematology, tumor immunology, and more. May, 1976. 242 pp., 122 illus. Price, $8.95.

What Speed Reading promised you... Speed Learning delivers.

That’s why Speed Learning is the only self-study reading program offered for college credits. That’s why major corporations and government agencies use Speed Learning to improve the reading/learning skills of important employees. That’s why over 4,000 schools, colleges and universities offer Speed Learning to their students.

Now there’s a way out from under that mound of “must” reading. Through Speed Learning, you can read almost as fast as you think and retain more of what you read. You’ll have a better grasp on developments in your field and become a more well-rounded person. No longer will you have to re-read paragraphs to get their meaning. No longer will you have trouble concentrating when you read. You’ll find yourself contributing more in business meetings. You’ll have more time for yourself and your family. Best of all, you can accomplish this at your own pace in the privacy of your own home.

You can’t meet today’s complex reading needs with 4th Grade skills

As hard as it is to believe, the way you read today probably hasn’t changed much since the 4th grade. You probably still go along at one rate of speed regardless of your purpose of reading...pronouncing each word to yourself as you read. It’s not your fault. Most schools stop teaching reading after the 4th grade. But there’s so much more to reading, and it’s so easy to learn.

New, exciting breakthrough helps you read at an adult level

To cope with a typical adult reading load, today’s executive, professional or student needs more efficient reading skills — skills that not only help him read faster but also help him understand more, remember more and use more of what he reads. Unfortunately, while most speed reading programs temporarily increase your rate of speed, they fail miserably with the comprehension (or learning) aspects of reading. That’s because most Speed Reading programs concentrate on teaching you rapid eye movement which research has proven to be only 5% of reading. In doing so, they ignore the most important part of reading (95%), thinking. Only Speed Learning puts the emphasis in the proper place... teaching you to organize your thinking so you can read all kinds of material as fast as is humanly possible for you.

Flexible Program fits your busy schedule

The beauty of Speed Learning is that it’s designed so you can master it in your spare time even if you only have a few minutes a day. There are no bulky timing devices or other costly gadgets usually found in speed reading programs, so you can study anywhere... at home, in the office, even on the train to work. Your program materials include a “teacher on cassettes” who guides, instructs and encourages you, explaining the exercise materials. You learn by reading interesting everyday materials taken from Time Magazine, Business Week, Family Circle, the New York Times and others...stimulating materials that make picking up your new skills easy and fun. There’s no pressure and no competition with other students, so you can improve yourself without fear of embarrassment — no matter how slow a reader you are now.

And Speed Learning is as effective as it is practical. The average student improves his reading rate 108%... a permanent increase based on sound fundamental skills which once learned are never forgotten. No wonder corporations like Eastman-Kodak, IBM and Bell Telephone and government agencies like IRS, the GSA and branches of the military offer Speed Learning to their key employees. To date, over 75,000 people have been helped by this program. Many have said, “This is the most important educational course I have ever taken. It really works.”

More effective... less expensive

If you’re an executive or professional person with too much to read and not enough time... if you’re a student who’s tired of that seemingly endless study grind...whatever you do, whoever you are, you can experience the valuable benefits and tremendous sense of satisfaction that comes from being a versatile, efficient, mature reader. Best of all you can accomplish this for as much as ¼ the cost of many “speed” reading courses. You develop reading and thinking to maximum efficiency, you do it at your own pace and save money in the process. And, if that’s not enough, there’s also a...

10-Day FREE Examination

You must be delighted with your Speed Learning Program or you pay nothing. Examine the course, listen to the tapes and if at the end of 10 days, you decide it’s not for you, you may return the program for a full refund with no questions asked. Enjoy the self-confidence that comes with being an efficient reader. Clip and mail the coupon below right away.

In most cases, the entire cost of your Speed Learning Program is Tax Deductible

TAKING COURSE FOR FULL COLLEGE CREDIT

Having recognized the need to take Americans beyond their elementary reading skills, more and more colleges and universities are teaching Speed Learning for full credit. And now you can earn college credit for home study. If you wish, for a slight additional fee, you can earn three college credits from the National College of Business, Accredited Member, Association of Independent Colleges and Schools. Complete details and College Credit Registration Form are included with each program for those who want to take advantage of this option.

INFECTION and the COMPROMISED HOST

Edited by James C. Allen, MD

Infection and the Compromised Host discusses the subject of immunology from a seldom-seen viewpoint. Its primary focus is on those clinical situations in which host defenses against infection are impaired. In the exposition of impaired response there is an extensive review of host defense mechanisms and current understanding of their functional significance, as well as those situations in which heritable defects or chemotherapy are associated with increased susceptibility to infectious diseases.

A multicontributor effort, with each author a recognized authority in the overlapping fields of microbiology, medicine, infectious diseases, pediatrics, dermatology, laboratory medicine, and pathology, Infection and the Compromised Host is brought together by its unifying concern with infection as a clinically important determinant of life or death in the patient who is afflicted with an impairment in his defenses.

While other texts in the field are primarily concerned with normal host defenses, Infection and the Compromised Host is not; with its comprehensive examination of impaired defense it adds a vast amount of new source material to the literature. By raising the questions it does, the state of knowledge in this crucially important medical area will be accurately characterized.
