Mouse Anti-theta Reagents

New
IgG FRACTION OF ANTI-THETA
plus

Mouse AKR Anti-C3H Ascites
Mock Mouse Anti-theta Ascites (Control)
Mouse AKR Anti-C3H Serum
Mock Mouse Anti-theta Serum (Control)
Rabbit Anti-Mouse Brain (C3H)—Adsorbed and Unadsorbed
Rabbit Anti-Mouse Brain (BALB/c)—Adsorbed and Unadsorbed

USES
- Investigations concerning the role of mouse T-cells in cellular immunity
- Studies of anti-tumor, anti-viral, or anti-bacterial immunity where identification or elimination of T-cells is required.

CHARACTERIZATION
Each lot of anti-theta is precisely characterized by:
- Specific cytolytic activity
- Effect on mitogenic response

These reagents are for research use only and are not for use in humans, nor for diagnostic or therapeutic purposes.

Please write for our Technical Data Sheet.

The Solution for *in vitro* lymphocyte isolation

**Ficoll-Paque™**

Ficoll-Paque is a sterile solution of Ficoll 400 and diatrizoate sodium (density 1.077 ± 0.001 g/cc). Available in bottles with a rubber septum closure to facilitate sterile handling and in a convenient pack size (6 × 100 ml). For further details see our booklet available on request.
Another Innovation from the Microtiter People

Automatic Cell Harvesters for Micro-Culture Procedures

The Cooke Microtiter® System, introduced 14 years ago, was the beginning of a new standard for investigative and diagnostic analysis. State-of-the-art advances have continued to expand and improve microculture techniques year after year.

Now Dynatech adds a full line of multiple automatic cell harvesters to the technology of micro-culture.

Dynatech Cell Harvesters have been specifically designed to enable rapid, accurate and efficient harvesting from Microtiter® plates, and range from single-wash manual units to multiple-wash automatically-timed instruments which offer the ultimate in reproducibility.

With all models, cellular content is deposited on a glass-fiber filter mat in a discrete area and after a brief drying period, is easily pushed out of the filter mat into a scintillation vial.

Up to 96 samples can be harvested in just 10 minutes with a background count between 20-50 CPM (compared to 150 CPM with other systems).

For complete details on all Dynatech Cell Harvesters, write today.

Get gel filtration results faster with Sephacryl® S-200 Superfine. It has speed and resolution to spare.

- Cut separation times. Typical flow rates are 30 cm/hour or better in standard laboratory columns.

- Cut column packing times. Sephacryl is pre-swollen ready-to-use in packs of 750 ml and packs fast.

Sephacryl S-200 Superfine is the new gel filtration medium for proteins, polysaccharides and other biopolymers. It combines excellent chemical and physical rigidity with an exclusion limit of ~250,000 daltons for globular proteins. Sephacryl can be used in detergents, structure-breaking media and organic solvents. It can be autoclaved repeatedly at 120°C.

Don’t wait until tomorrow, send for further details today. From your usual supplier of Sephadex®, Sepharose® and other separation media.
We cater to the cultured set.

When we feed our cell lines, we serve only the finest. Flow Laboratories Media and Sera. If our media and sera have helped us to become the number one producer of cell cultures, it should do the same for you. And that's food for thought.

Whether you are using our cells or not, help them reach their full potential, give them a taste of the good life — with media and sera from Flow Laboratories.

If you'd like to see a menu describing our products and test procedures contact us.

If it doesn't say Flow Laboratories, it's not a Cell Raiser product.

COSTAR DISPOSABLE LABWARE—We started with three dishes and two flasks, and we’ve been adding labware ever since. Not just new products—new ideas.

Cluster Plates: Every well numbered so you work quickly and accurately. And rimmed so media stays where it belongs. Plus non-reversible covers with built-in condensation rings to prevent cross-contamination.
**Dishes:** Three sizes plus a 2mm grid version and our 108-well Cuprak dish.

**Flasks:** Deep skirted, easy on/off caps. And graduated media markers for accurate filling without the use of a pipette. We even designed a small, wide-neck triangular flask that lets you reach more growing surface with a 10ml pipette.

**On Everything:** Frosted labeling surfaces where necessary. Highly polished, distortion-free plastic. Radiation sterilization. And a quality control program that makes sure everything we say comes true.

**Free Samples:** If you'd like some evaluation samples, pick out two or three products and call or write to us. We'll even include pricing information and the name of our nearest dealer.

Disposable Labware with Keepable Ideas

205 Broadway

Cambridge, MA 02139

Phone (617) 492-1110

---

This is the first disposable plastic Leighton Tube. The cover slip has a non-slip handle, and the slide has a scribed center line with each half numbered. Treated cover slip, untreated tube helps prevent unintentional cell attachment.
INVOLVED IN THE COLLECTION, HARVESTING, PROCESSING OR SEPARATION OF CELLS ???

THE MODEL CHAP-100, CELL HARVESTER AND PROCESSOR, PROVIDES A RELIABLE, EFFICIENT, AUTOMATED SYSTEM FOR THE COLLECTION (HARVESTING) AND PROCESSING OF CELLS AND THEIR SUPERNATANTS (FILTRATES) FOR THE LABORATORIES FOR IMMUNOLOGY, TISSUE TYPING, CELL CULTURES AND VIROLOGY.

- Easy to operate and maintain.
- Flow control for washing solutions.
- More accurate and reproducible results.
- Interchangeable collection heads for harvesting from microtiter plates or test tube racks.
- Rugged stainless steel design for protection against corrosive and radioactive elements.
- Field proven for varied laboratory applications.
- Requires no electrical power—only a simple vacuum.
- Test tube rack for individual filtrate collection.

Protein A
Cell surface and immunoglobulin studies

Protein A
for use in studies of cell surface antigens. Binds specifically to the Fc region of IgG of sub-classes 1, 2 and 4. Purified by affinity chromatography.

Protein A-
Sepharose CL-4B
for affinity chromatography of IgG. Protein A covalently coupled to cross-linked Sepharose 4B.

For further details see our booklet available on request.
When you need agarose—one of ours is sure to meet your requirements.

Perhaps you need a high electroendosmosis (EEO) for counter-immunoelectrophoresis? Either HEEO Agarose or Agarose (HE) should be suitable.

Perhaps you require a high gel strength, low EEO agarose for zone electrophoresis or electroimmunodiffusion? HGT Agarose or Agarose (LE) should be ideal.

You may require extremely high purity like that of HGT(P) Agarose, or an exceptionally low gelling temperature like that of LGT Agarose (GT = 28°C), or perhaps an agarose that exhibits minimum binding to borate buffers as does HGT Agarose.

On the other hand, you may only want a high quality, general purpose product of consistent manufacture, such as Agarose (ME).

Research Products is pleased to offer seven different and highly characterized preparations manufactured by Marine Colloids, Inc. and distributed through our offices around the world.

For specifications and prices in various package sizes call or write the office nearest you.
LENTINS (Agglutinins) are widely distributed in seeds and invertebrates. They are often called "Phytohemagglutinins" or Phytoagglutinins. Lentinis are proteins that agglutinate erythrocytes and certain other cells by binding specific carbohydrates on the cell surface. Each type of Lentinis has its own carbohydrate-binding specificity. This characteristic makes them useful in the study of the structure and function of cell membranes. We will look forward to comments, criticisms and suggestions, so that Sigma will ultimately offer the most comprehensive list of high-purity Lectins available anywhere in the world. Many reports indicate the need for Calcium and Manganese ions to "stabilize" lectins. Pending further studies and comments from our customers, most of our Lectins will contain about 0.05% free Calcium and 0.05% free Manganese. Although not shown on most labels, competitive preparations we have tested generally contain Calcium and Manganese also. We will look forward to comments, criticisms and suggestions, so that Sigma will ultimately offer the most complete list of high-purity Lectins available anywhere in the world. Immunopathology

VIIth International Symposium
Held at Bad Schachen (Germany), June 14-19, 1976
Edited by PETER A. MIESCHER, M.D.

The VIIth Immunopathology Symposium reflects the main present trends in the field: first, immunogenetics has emerged as a very important part of immunopathology. Various papers are dealing with the regulation of the immune response. Microbial immunopathology is another field which demonstrates an increasing impact of immunology on medicine. The pathogenesis of protozoal diseases is being discussed as well as the possible role that slow viruses may play in a number of immunopathological conditions. Furthermore, research on bio-mediators in effector mechanisms is continuously producing new results of importance in the understanding of a number of pathogenic mechanisms of disease. Then, studies on immune deficiency have permitted the better assessment of the level of immunological incompetence. A new type of immune deficiency is being described. Immune stimulation has been discussed for many decades but appears to have emerged just now to proper scientific assessment.

Immunology in Medicine

A COMPREHENSIVE GUIDE TO CLINICAL IMMUNOLOGY

Edited by E. J. HOLBOROW and W. G. REEVES

Immunological knowledge has grown in complexity and scope to such an extent that the majority of practicing doctors find themselves ill-equipped to apply it usefully to everyday medical problems. Immunology in Medicine has been designed to correct this state of affairs. The initial chapter gives an overview of immunology: its history, jargon, cardinal features and mechanisms. Subsequent chapters review the important basic aspects, discuss the means by which immunological mechanisms cause disease (with particular emphasis on autoimmunity), and consider infective disease and immunodeficiency. The largest section deals with the immunology of individual system disorders, and is followed by contributions on malignancy and transplantation. The last two chapters, on therapeutic aspects, categorize the various ways in which untoward immunological responses may be controlled.

Bred and raised without the use of antibiotics, every Sprague-Dawley Athymic Nude Mouse is entirely free of any agent which might influence the course of a malignancy culture. Because of this exceptional consistency, serial tumor passage is accomplished without fear of introducing additional variables. And the character of the neoplasm remains intact.

Our Athymic Nude Mouse is an ideal host for many human malignancies. Tumors grow anywhere on the animal's skin but will not metastasize. The animal does not develop spontaneous malignancies. Leukemia cells do not survive. Autoantibody production is rare. B cell concentration and capacity are both normal.

Sprague-Dawley delivers the cleanest, healthiest animals from the cleanest facility in the lab animal industry. Your order is shipped in special, filtered containers. And each animal is ready for immediate use.

Little wonder that today's best animal for in vivo studies of tumors and anti-cancer drug research is the Sprague-Dawley Balb/c Athymic Nude Mouse.

Call or write, Sprague-Dawley Sales Headquarters, 29999 Industrial Parkway, Solon, Ohio 44139. (216) 248-2310.
Dynatech Laboratories introduces a new and advanced microtitration plate especially suited for solid phase immuno-assays.

Molded of Immulon™, a uniquely formulated styrene plastic with enhanced protein binding characteristics, the MICROELISA™ plates are indispensable in Enzyme-Linked Immuno Sorbent Assays (ELISA) and radio immuno-assays (RIA).

MICROELISA™ Plate Advantages
- More Protein binds to plate
- Protein binds more firmly
- Greater uniformity in binding

These microtitration plates are molded in the familiar Cooke Microtiter® 96-well configuration, allowing it to be used with all of the manual and automatic dispensers and diluters in the Microtiter™ System. The plates are available with flat bottom wells or round "u" bottom wells.

Signed
for CANCER RESEARCH and CELL BIOLOGY

Serving researchers in Immunology, Transplantation, Hematology and Virology.

This self-contained gamma irradiator houses twin Cesium 137 sources and is ideal for research projects with rats and mice.

Hospitals, Medical Centers, Medical Schools and Laboratories are carrying out research programs by irradiating cells, blood and cultures, in addition to small animals.

The GAMMACELL 40 features low uniform dose rate (±5% in irradiator chamber), simple loading and operation. No additional shielding is required and the unit occupies only 12 square feet of floor space.

Since 1952 Atomic Energy of Canada Limited has manufactured teletherapy units, radioisotopes and radiation equipment for industry and medicine. With this long experience, you can depend on AECL.

If you wish more information on the GAMMACELL 40, please mail the coupon below.

LYMPHOLYTE-M is designed specifically for the isolation of viable MOUSE lymphocytes.
LYMPHOLYTE-M provides HIGH RECOVERY of lymphocytes from all mouse lymphoid tissues.
LYMPHOLYTE-M removes RED CELLS and DEAD CELLS from mouse lymphoid cell suspensions.
LYMPHOLYTE-M is particularly useful for:
   Isolation of mouse spleen lymphocytes
   Removal of dead cells in sequential cytotoxicity studies

Cellulose ion exchangers should be spherical too

DEAE-Sephacel® is

The spherical form of DEAE-Sephacel gives you easy, uniform packing without the generation of fines. It improves your results because it reduces zone broadening and ensures uniform, high flow rates. DEAE-Sephacel is reproducible from batch-to-batch.

No precycling is needed because DEAE-Sephacel is ready swollen. Its controlled macroporous structure, which is almost completely independent of pH and ionic strength, gives high protein capacities and excellent recoveries.

DEAE-Sephacel is the only spherical cellulose ion exchanger.
Does your incubator leak?

Ours doesn't

A NEW CONCEPT TO MINIMIZE EXPERIMENTAL VARIABILITY

The Billups-Rothenberg conceived Modular Incubator Chamber has been developed to meet the critical demands of cellular immunologists who perform Mishell-Dutton primary in vitro immune, MLC, CML, mitogen and proliferative responses.

Our reliable air-tight seal is specifically designed to eliminate gas exchange which can cause unpredicted variations in pH and humidity, often found in continuous flow incubators and older rectangular box designs.

* All components can be UV-sterilized.
* Multi-purpose trays conveniently hold petri dishes, test tubes, T.C. flasks, microculture plates, etc.
* Chambers can be stacked and interlocked for agitation or storage.
* Chamber and tray components are high quality, molded polycarbonate.

PRICE $95 ea.

Motor Disorders of the Esophagus

By Robert D. Henderson, MB, FRCS(C), with the editorial collaboration of John O. Godden, MD, FRCP(C)

In the rapidly expanding field of thoracic surgery, there has been a need to define and inform — Motor Disorders of the Esophagus is the state of the art of esophageal surgery.

Covering 90 percent of all esophageal disease, Motor Disorders of the Esophagus is founded on wide and intensive experience. Presentations of individual clinical entities are illustrated by characteristic case histories, and the symptoms, natural history, and results of therapy are grounded in a thorough review of a large number of patients. Motor Disorders is a practical summary of modern knowledge of esophageal dysfunction, an evaluation of the esophageal literature, and the author's original views of motor disorders — all combined to demonstrate the dramatic increase in investigative and therapeutic activity in this area of thoracic medicine.

Transplantation is the journal that uses today's research to bring tomorrow into better focus

Researchers and clinicians who need to know what's going on in immunology have long looked to Transplantation to find out. In its pages can be found the vitally pertinent information you want as you look for answers to the critical problems of rejection, tissue matching, immunization, and infection.

Hematology, endocrinology, genetics, and embryology are just a few of the specialties in Transplantation's cross-disciplinary coverage. Each issue contains formal in-depth papers, as well as brief reports on research from around the world.

As a subscriber to Transplantation you can expect to find only the latest information; you will know you are getting the best news first.
