INDEX TO VOLUME XII

Acid-fast bacteria, On the serological relationship of.......................... 273
Adrenalin, The bactericidal action of the serum following injections of.... 205
Agglutinin-absorption reaction as related to the newer biology of bacteria,
with special reference to the nature of spore formation...................... 355
Agglutinins, cold, in human serum, On the...................................... 441
Ainu, On the biochemical racial-index of the, Gilyak and Orokk in Karafuto
(Saghalien)...................................................................................... 91
Alexander, H. L., Holmes, J. A. and Becke, W. G. Smooth muscle in anaphylactic guinea pigs. Exaggerated response to mixtures of sensitized tissue and homologous antigens................................. 401
Anaphylactic guinea pigs, Smooth muscle in, Exaggerated response to mixtures of sensitized tissue and homologous antigens.................................................. 401
—— shock, Heparin inhibition of................................................. 419
—— shock, The influence of, on fluid in the peritoneal cavity. II. Influence upon the organic and inorganic constituents................................................... 19
Anaphylaxis, Heterologous corpuscular............................................. 309
Arnold, Lloyd and Weiss, Emil. Bacterial protein-free bacteriophage prepared by tryptic digestion................................................................. 393
Asthma and dermatitis due to hypersensitiveness to Pediculoides ventricosus........................................................................................................ 263
Asthmatics, A study of the degree of sensitivity of, to various atopens 191
Atopens, A study of the degree of sensitivity of asthmatics to various 191
Atopic reagins, Neutralization of, in vivo......................................... 461

Bacteria, Heterophile antigen in...................................................... 1
Bacterial protein-free bacteriophage prepared by tryptic digestion........ 393
—— variation. Serological characters of parent and sub-strains within the para-B-suispestifer group................................................................. 377
Bactericidal action of the serum following injections of adrenalin.......... 205
Bacteriophage, Bacterial protein-free, prepared by tryptic digestion...... 393
Becke, W. G., Alexander, H. L. and Holmes, J. A. Smooth muscle in anaphylactic guinea pigs. Exaggerated response to mixtures of sensitized tissue and homologous antigens................................................. 401
Blood-group feature, On the value of the, as a means of determining racial relationship................................................................. 251
Blood groups, A hitherto undescribed anomaly in................................ 35
Brain extracts, The lethal action of, for the rabbit and guinea pig......... 321
Brokman, H. and Popowski, S. The relative frequency of the positive dysentery-skin reaction at different ages................................. 45
Caulfeild, A. H. W., Cohen, Cecile, and Eadie, George S. The antigenic properties of pollen fractions .......................................... 153
Chemovaccinotherapy of experimental meningococcus infection ......... 467
Clarke, J. A., Jr. and Gallagher, May G. Neutralization of atopic reagins in vivo ................................................................. 461
Cohen, Cecile, Eadie, George S. and Caulfeild A. H. W. The antigenic properties of pollen fractions ............................................... 153
Cold agglutinins in human serum, On the .................................. 441
Complement fixation test, The non-specific activation in the, of the alcohol soluble antigens of the tubercle bacillus ............................... 123
— splitting, Studies in, with special reference to the activation of yeast absorbed and complement deficient guinea pig serum ................... 47
Corpuscular anaphylaxis, Heterologous......................................... 309
Dienes, L. and Freund, J. On the antigenic substances of the tubercle bacillus ............................................................... 137
— and Scheff, L. D. The nonspecific activation in the complement fixation test of the alcohol soluble antigens of the tubercle bacillus ............................... 123
Dysentery-skin reaction, positive, The relative frequency of the, at different ages .................................................................. 45
Eadie, George S., Caulfeild, A. H. W. and Cohen, Cecile. The antigenic properties of pollen fractions .............................................. 153
Edwards, Philip R. and Rettger, Leo F. Bacterial variation. Serological characters of parent and sub-strains within the para-B-suipestifer group ................................................................. 377
Fineman, A. H. Studies in hypersensitiveness. XXV. A study of the degree of sensitivity of asthmatics to various atopens .............. 191
Fleisher, Moyer S., Mayer, Leo L. and Wilhelmi, C. M. The influence of anaphylactic shock on fluid in the peritoneal cavity. II. Influence upon the organic and inorganic constituents ...................................... 19
Freund, J. and Dienes, L. On the antigenic substances of the tubercle bacillus ............................................................... 137
Furth, J. On the serological relationship of acid-fast bacteria ............. 273
Furuhata, Tanemoto, and Kishi, Takayoshi. On the biochemical racial index of the Japanese in the Hokuriku District (northern part of middle Japan) ........................................................................... 83
Gabringer, John Edward. The sensitization of pigeons to foreign proteins ................................................................. 477
Gallagher, May G. and Clarke, J. A. Jr. Neutralization of atopic reagins in vivo ................................................................. 461
Gonorrhea, chronic, in women, A study of the laboratory aids to the diagnosis of ................................................................. 293
Group specific substances in human spermatozoa ................................ 415
Grove, Ella F. On the value of the blood-group feature as a means of determining racial relationship ........................................... 251
INDEX

Grove, Ella F. Studies in specific hypersensitiveness. XXVI. On asthma and dermatitis due to hypersensitiveness to pediculoides ventricosus... 263

Heparin inhibition of anaphylactic shock... 419

Hereditly, microbic, Studies in, IX. Observations on the biologic origin and the physicochemical nature of inagglutinability with freshly isolated typhoid bacilli... 331

— microbic, Studies in, X. The agglutinin-absorption reaction as related to the newer biology of bacteria, with special reference to the nature of spore formation... 355

Heterophile antigen in bacteria... 1

Holmes, J. A., Becke, W. G. and Alexander, H. L. Smooth muscle in anaphylactic guinea pigs. Exaggerated response to mixtures of sensitized tissue and homologous antigens... 401

Hyde, Roscoe R. Heterologous corpuscular anaphylaxis... 309

—- and Parsons, Elizabeth, I. The lethal action of brain extracts for the rabbit and guinea pig... 321

Hypersensitiveness following the administration of placental extract. The uterine horn reaction... 31

—- following injections of placental extracts... 7

—-, Studies in, XXV. A study of the degree of sensitivity of asthmatics to various atopens... 191

—-, Studies in specific, XXVI. On asthma and dermatitis due to hypersensitiveness to pediculoides ventricosus... 263

Immunity, The basic concepts of... 177

Inagglutinability, Observations on the biologic origin and the physicochemical nature of, with freshly isolated typhoid bacilli... 331

Isohemoagglutination, The individuality of semen, with reference to its property of inhibiting specifically... 185

Japanese, On the biochemical racial-index of the, in the Hokuriku district (northern part of middle Japan)... 83

Johnson, Alice, and Ottenberg, Reuben. A hitherto undescribed anomaly in blood groups... 35

Jost, Elizabeth L. and Mellon, Ralph R. Studies in microbic heredity. IX. Observations on the biologic origin and the physicochemical nature of inagglutinability with freshly isolated typhoid bacilli... 331

Kabelik, J. On a new serum test in the diagnosis of tuberculosis and syphilis. Part I. Theoretical principles and the procedure... 423

Kishi, Takayoshi. On the biochemical racial-index of the Ainu, Gilyak and Orokko in Karafuto (Saghalien)... 91

—- and Furuhata, Tanemoto. On the biochemical racial-index of the Japanese in the Hokuriku district (northern part of middle Japan)... 83

Kyes, Preston, and Strauser, E. R. Heparin inhibition of anaphylactic shock... 419
Landsteiner, K. and Levine, Philip. On group specific substances in human spermatozoa. .......................................................... 415
— and Levine, Philip. On the cold agglutinins in human serum. .... 441
Levine, Philip, and Landsteiner, K. On group specific substances in human spermatozoa. .......................................................... 415
— and Landsteiner, K. On the cold agglutinins in human serum. ..... 441
Manwaring, W. H. The basic concepts of immunity ....................... 177
Mayer, Leo L., Wilhelmj, C. M. and Fleisher, Moyer S. The influence of anaphylactic shock on fluid in the peritoneal cavity. II. Influence upon the organic and inorganic constituents ..................................... 19
Mellon, Ralph R. Studies in microbial heredity. X. The agglutinin-absorption reaction as related to the newer biology of bacteria, with special reference to the nature of spore formation. ....................... 355
— and Joost, Elizabeth L. Studies in microbial heredity. IX. Observations on the biologic origin and the physiochemical nature of inagglutinability with freshly isolated typhoid bacilli .......................................................... 331
Meningococcus infection, experimental, The chemovaccinotherapy of. . 467
Miller, A. A. The chemovaccinotherapy of experimental meningococcus infection .......................................................... 467
Musselman, L. K. and Smith, George H. The hypersensitiveness following injections of placental extracts .......................................................... 7
— and Smith, George H. The hypersensitiveness following the administration of placental extract. The uterine horn reaction ....................... 31
Orally immunized rats, Response of, to a second injection of pneumococcus and the minimum duration of immunity .......................................................... 323
Ottenberg, Reuben, and Johnson, Alice. A hitherto undescribed anomaly in blood groups .......................................................... 35
Parsons, Elizabeth I. Studies in complement splitting with special reference to the activation of yeast absorbed and complement deficient guinea pig serum .......................................................... 47
— and Hyde, Roscoe, R. The lethal action of brain extracts for the rabbit and guinea pig .......................................................... 321
Patterson, Raymond S. A study of the laboratory aids to the diagnosis of chronic gonorrhoea in women .......................................................... 293
Pediculoides ventricosus, On asthma and dermatitis due to hypersensitivity to ........................................................................ 263
Peritoneal cavity, The influence of anaphylactic shock on fluid in the, II. Influence upon the organic and inorganic constituents. ....................... 19
Petroff, S. A. and Stewart, F. W. Immunological studies in tuberculosis. IV. Concerning the resistance to infection of animals sensitized with killed tubercle bacilli .......................................................... 97
Physicochemical nature of inagglutinability, Observations on the biologic origin and the, with freshly isolated typhoid bacilli ........................................ 331
Pigeons, The sensitization of, to foreign proteins ........................................ 477
Placental extracts, The hypersensitiveness following injections of............  
--- extract, The hypersensitiveness following the administration of, The  
uterine horn reaction.................................................. 31
Pneumococcus, Immunity to, produced in rats by feeding tissues of animals  
killed by the same organism........................................... 219  
---, Immunity to, produced in rats by feeding them the germ.............. 237
---, Response of orally immunized rats to a second injection of, and the  
minimum duration of immunity.................................. 323
Pollen fractions, The antigenic properties of................................... 153
--- immune serum, A study of........................................... 231
Popowski, S. and Brokman, H. The relative frequency of the positive dys-  
enteric skin reaction at different ages..................................... 45
Powell, H. M. Heterophile antigen in bacteria............................. 1

Racial-index, On the biochemical, of the Ainu, Gilyak and Orokko in Kara-  
futo (Saghalien).......................................................... 91
---, On the biochemical, of the Japanese in the Hokuriku district (northern  
part of middle Japan).................................................. 83
Racial relationship, On the value of the blood-group feature as a means of  
determining............................................................ 251
Ramsdell, Susan Griffith. A study of pollen immune serum.................... 231
Reagins, atopic, Neutralization of, in vivo................................... 461
Rettger, Leo F. and Edwards, Philip R. Bacterial variation. Serological  
characters of parent and sub-strains within the para-B-suis pestifer  
group................................................................. 377
Ross, Victor. Immunity to pneumococcus produced in rats by feeding tis-  
sues of animals killed by the same organism.......................... 219
---. Immunity to pneumococcus produced in rats by feeding them the  
ergum.................................................................. 237
---. Response of orally immunized rats to a second injection of pneumococ-  
cus and the minimum duration of immunity........................... 323

Scheff, L. D. and Dienes, L. The non-specific activation in the complement  
fixation test of the alcohol soluble antigens of the tubercle bacillus.... 123
Semen, The individuality of, with reference to its property of inhibiting spe-  
cifically isohemoagglutination........................................ 185
Sensitization of pigeons to foreign proteins................................. 477
Smith, George H. The bactericidal action of the serum following injections  
of adrenalin.................................................................. 205
--- and Musselman, L. K. The hypersensitiveness following injections of  
placental extracts........................................................ 7
--- and Musselman, L. K. The hypersensitiveness following the adminis-  
tration of placental extract. The uterine horn reaction............... 31
Spermatozoa, On group specific substances in human.......................... 415
Spore formation, The agglutinin-absorption reaction as related to the newer  
biology of bacteria, with special reference to the nature of............ 355
Stewart, F.W. and Petroff, S.A. Immunological studies in tuberculosis. IV. Concerning the resistance to infection of animals sensitized with killed tubercle bacilli ........................................................ 97

Syphilis, On a new serum test in the diagnosis of tuberculosis and, Part I. Theoretical principles and the procedure ........................................ 423

Tryptic digestion, Bacterial protein-free bacteriophage prepared by ........ 393

Tubercle bacillus, The non-specific activation in the complement fixation test of the alcohol soluble antigens of the ........................................ 123

——— bacillus, On the antigenic substances of the .................................. 137

Tuberculosis, Immunological studies in, IV. Concerning the resistance to infection of animals sensitized with killed tubercle bacilli .............. 97

———, On a new serum test in the diagnosis of, and syphilis. Part I. Theoretical principles and the procedure ........................................ 423

Variation, Bacterial. Serological characters of parent and sub-strains within the para-B-suipesteifer group ........................................ 377

Weiss, Emil and Arnold, Lloyd. Bacterial protein-free bacteriophage prepared by tryptic digestion ......................................................... 393

Wilhelmj, C. M., Fleisher, Moyer S. and Mayer, Leo L. The influence of anaphylactic shock on fluid in the peritoneal cavity. II. Influence upon the organic and inorganic constituents ........................................ 19

Yamakami, K. The individuality of semen with reference to its property of inhibiting specifically isohemoagglutination ........................................ 185

Yeast absorbed, Studies in complement splitting with special reference to the activation of, and complement deficient guinea pig serum ........ 47
