Bionetics does it for you.

Anti-Mouse T-Cell Reagents

New

Fluorescein Conjugates of Rabbit Anti-Mouse Brain, Adsorbed

plus

IgG Fraction of Anti-theta
Mouse AKR Anti-C3H Ascites
Mock Mouse Anti-theta Ascites (Control)
Mouse AKR Anti-C3H Serum
Mock Mouse Anti-theta Serum (Control)
Rabbit Anti-Mouse Brain (C3H)—Adsorbed and Unadsorbed
Rabbit Anti-Mouse Brain (BALB/c)—Adsorbed and Unadsorbed

USES

• Identification and quantitation of T-cells by Direct and/or Indirect FA methods.
• Investigations concerning the role of mouse T-cells in cellular immunity
• Studies of anti-tumor, anti-viral, or anti-bacterial immunity where identification or elimination of T-cells is required.

CHARACTERIZATION

Each lot of anti-theta is precisely characterized by:
• Specific cytolytic activity
• Effect on mitogenic response

These reagents are for research use only and are not for use in humans, nor for diagnostic or therapeutic purposes.

Please write for our Technical Data Sheet.

THE JOURNAL OF IMMUNOLOGY

For the Mouse Immunologist
from CEDARLANE

LOW-TOX RABBIT COMPLEMENT
FOR USE WITH MOUSE LYMPHOCYTES

- Low toxicity to mouse lymphocytes
- High complement activity
- Designed for use with cytotoxic antisera to mouse lymphocytes

CL 3051 5 x 1 ml, lyophilized $30.00

ANTI-MOUSE T-CELL SERUM
RABBIT ANTI-MOUSE BRAIN ASSOCIATED THY-1 ANTISERUM

- Strongly cytotoxic to thymocytes and peripheral T-lymphocytes
- Thoroughly absorbed to remove cross-reactivity to B-lymphocytes

CL 2001 1 ml, lyophilized $25.00
CL 2005 5 ml, lyophilized $100.00

LYMPHOLYTE-M
FOR THE ISOLATION OF VIABLE MOUSE LYMPHOCYTES

- Isolation of viable lymphocytes from all mouse lymphoid tissues
- Removal of dead cells in sequential cytotoxicity studies
- Removal of dead cells from lymphocyte cell cultures

CL 5030 5 x 30 ml, sterile $50.00

CEDARLANE CYTOTOXICITY MEDIUM
FOR CYTOTOXICITY ASSAYS UTILIZING MOUSE LYMPHOCYTES

- Medium designed specifically for use with cytotoxic antisera to mouse lymphocytes
- Contains HEPES buffer to maintain pH
- Contains BSA to reduce background toxicity

CL 95100 5 x 100 ml, sterile $25.00

HEMO-LO GUINEA PIG COMPLEMENT
FOR SENSITIVE SRBC PLAQUE ASSAYS

- Low background hemolysis, pre-absorbed with SRBC
- High complement activity
- For plaque assays utilizing free or haptenated SRBC

CL 4555 5 x 5 ml, lyophilized $60.00

RABBIT ANTI-MOUSE IMMUNOGLOBULIN ANTISERUM

- Polyclonal, high titer, specific
- Uses: Developing serum for IgG-pFc
  Second antibody for mouse alloantisera
  B-cell studies
  Immunodiffusion techniques

CL 6002 2 ml, lyophilized $25.00

The Perfect Fit

The Titertek® Multichannel Pipette

The kingdom was searched, the single foot was found. The 96 well microtitration or tissue culture plate has had to wait until Flow Laboratories found the perfect fit — The Titertek Multichannel Pipette.

The pipettes are available in the following models:

<table>
<thead>
<tr>
<th>Variable Volume</th>
<th>Fixed Volume</th>
</tr>
</thead>
<tbody>
<tr>
<td>.005 – .050 ml</td>
<td>.025 ml</td>
</tr>
<tr>
<td>.050 – .200 ml</td>
<td>.050 ml</td>
</tr>
<tr>
<td>.100 ml</td>
<td>.100 ml</td>
</tr>
<tr>
<td>.200 ml</td>
<td>.200 ml</td>
</tr>
</tbody>
</table>

Dispensing and Filling depress a single plunger in the handle
Variable Volume Selection set the micrometer-like adjustment
Tip Ejection depress the tip ejector to release all tips
Tips available individually or in bands of 4 tips

Pipette Accuracy ±1.5%
Variable volume single channel pipettes are also available in .005 – .050, .050 – .200 and .200 – 1.0 ml volumes
The Titertek Multichannel Pipette fits — use it!

New From Plenum

Comprehensive Immunology
edited by Robert A. Good and Stacey B. Day
Sloan-Kettering Institute for Cancer Research
This important series assembles world authorities from a wide range of disciplines concerned with research in both basic and clinical immunology.

Volume 1
Immunology and Aging
edited by Takashi Makinodan and Edmond Yunis
"... an excellent source book." —Nature
224 pp., illus., 1977, $27.00/£14.18

Volume 2
Biological Amplification Systems in Immunology
edited by Noorbibi K. Day and Robert A. Good
341 pp., illus., 1977, $42.00/£22.05

Volume 3
Immunopharmacology
edited by John W. Hadden, Ronald G. Coffey and Federico Spreafico
442 pp., illus., 1977, $42.00/£22.05

Volume 4
The Immunopathology of Lymphoreticular Neoplasms
edited by J. J. Twomey and Robert A. Good
approx. 685 pp., illus., 1977, $54.00/£28.35

Volume 5
Immunoglobulins
edited by Gary W. Litman and Robert A. Good
approx. 335 pp., illus., 1978, $35.40/£18.59
This series not available from Plenum in Japan and Okinawa.

Immunity to Blood Parasites of Animals and Man
edited by Louis H. Miller
National Institute of Allergy and Infectious Diseases
and John A. Pino and John J. McKelvey, Jr.
The Rockefeller Foundation
Examines antigenic variation and other mechanisms by which blood-borne parasites have been able to counteract the innate resistance and immunological defense of their hosts. Advances in Experimental Medicine and Biology, Volume 93. 336 pp., 1977, $35.40/£18.59.

Nutrition, Immunity, and Infection
Mechanisms of Interactions
by R. K. Chandra
Memorial University of Newfoundland
and P. M. Newberne
Massachusetts Institute of Technology
Provides a concise, critical summary of the most recent research findings, published up to and including 1977, on the relationships among diet, morbidity, and mortality.
284 pp., illus., 1977, $27.00/£14.18.

Immunochemistry of Proteins
edited by M. Z. Atassi
Mayo Graduate School of Medicine and University of Minnesota
This outstanding treatise reviews the major contemporary approaches to the study of the antigenic structures of native proteins.
Volume 1: 485 pp., illus., 1977, $53.40/£28.04
Volume 2: 438 pp., illus., 1977, $53.40/£28.04
Volume 3: in preparation for 1978

Cellular Senescence and Somatic Cell Genetics
Series Editors: Warren W. Nichols and Donald G. Murphy
Volume 1: Regulation of Cell Proliferation and Differentiation
edited by Warren W. Nichols
Institute for Medical Research and Donald G. Murphy
National Institute on Aging
Examines the use of genetically marked cells with the ultimate goal of clarifying the mechanisms by which a mammalian genome regulates and couples cell proliferation and differentiation. 216 pp., 1977, $30.00/£15.75

Volume 2: Senescence Dominant or Recessive in Somatic Cell Crosses?
edited by Warren W. Nichols and Donald G. Murphy
Focuses on the relative roles of the nucleus and cytoplasm in determining the in vitro lifespan of human diploid cells. 134 pp., 1977, $23.40/£12.29

Volume 3: Mycoplasma Infection of Cell Cultures
edited by Gerard J. McGarry
Institute for Medical Research
Donald G. Murphy and Warren W. Nichols
Presents a unique and timely review of the incidence, methods of detection, and effects of the infection on host physiology. 352 pp., 1978, $35.40/£18.59

Visit Booth D7 at the Biochemistry Meeting, Atlanta, USA
A new density gradient medium which makes centrifugation simpler, quicker and gives much greater resolution than you ever thought was possible.

- Self-generating gradients in 30 minutes or less
- Isoosmotic throughout the gradient
- Non-toxic to cells and viruses
- Does not interfere with enzyme assays or quench radioactivity
- Low viscosity for rapid isopycnic or rate zonal separations
- Suitable for cells, viruses and subcellular particles

NEOPLASM IMMUNITY: SOLID TUMOR THERAPY

from: The Franklin Institute Press, Box 2266, Phila., Pa. 19103
**Microbial DECARBOXYLASES**

**UNIT DEFINITION:** For Amino Acid Decarboxylases, one unit will release 1.0 μMole of CO₂ from the Amino Acid substrate per minute, at the indicated pH and temperature. For other Decarboxylases, see unit definitions under individual listings.

### L-ARGININE DECARBOXYLASE (E.C. No. 4.1.1.19)
- **A5381** From Escherichia coli. Powder.
  - Activity: 0.8-0.9 unit per mg solid at pH 5.2 at 37°C.
  - 75 units: $27.50
  - 750 units: $200.00

### L-ARGININE DECARBOXYLASE (E.C. No. 4.1.1.15)
- **G2376** From Clostridium welchii. Powder.
  - Activity: 0.8-1.5 units per mg solid at pH 5.0 at 37°C.
  - 25 units: $54.00
  - 150 units: $60.00

### L-GLUTAMIC DECARBOXYLASE (E.C. No. 4.1.1.15)
- **G2126** From Escherichia coli. Powder.
  - Activity: 2.5-5.5 units per mg solid at pH 5.0 at 37°C.
  - 40 units: $3.60
  - 1500 units: $60.00

### OROTIDINE-5-MONOPHOSPHATE DECARBOXYLASE (E.C. No. 4.1.1.23)
- **03757** From Yeast. Powder.
  - Activity: Approx. 10 units per mg Protein (Biuret) at pH 5.0 at 37°C.
  - 20 units: $6.25
  - 500 units: $12.50

### OXALATE DECARBOXYLASE (E.C. No. 4.1.1.2)
- **O3500** From Flammulina (Collybia) velutipes. Powder.
  - Activity: Approx. 5 units per mg Protein (Biuret) at pH 5.0 at 37°C.
  - 20 units: $95.00

### L-HISTIDINE DECARBOXYLASE (E.C. No. 4.1.1.22)
- **H8375** From Clostridium welchii. Powder.
  - Activity: Approx. 0.1 unit per mg Protein (Biuret) at pH 4.5 at 37°C.
  - 1 unit: $12.00
  - 2 units: $20.00

### L-lysine Decarboxylase (E.C. No. 4.1.1.18)
- **L0882** From Bacillus cadaveris. Powder.
  - Activity: 1-3 units per mg solid at pH 6.0 at 37°C.
  - 250 units: $65.00
  - 1000 units: $180.00

### L-lysine Decarboxylase (E.C. No. 4.1.1.18)
- **L1007** From Bacillus cadaveris. Powder.
  - Activity: 10-15 units per mg solid at pH 6.0 at 37°C.
  - 25 units: $18.00
  - 250 units: $98.00

### L-lysine Decarboxylase (E.C. No. 4.1.1.18)
- **L9502** From Escherichia coli. Powder.
  - Activity: 0.2-0.3 unit per mg solid at pH 6.0 at 37°C.
  - 8 units: $9.00
  - 15 units: $15.00

### L-ornithine Decarboxylase (E.C. No. 4.1.1.17)
- **O3001** From Escherichia coli. Powder.
  - Activity: 0.05-0.2 unit per mg Protein (Biuret) at pH 5.0 at 37°C.
  - 5 units: $15.00
  - 50 units: $243.00

### PYRUVATE DECARBOXYLASE (E.C. No. 4.1.1.1)
- **P0133** From Brewers Yeast. Suspension in 3.2M (NH₄)₂SO₄ solution, pH 6.
  - Activity: 10-20 units per mg Protein (Biuret).
  - 500 units: $243.00

### Tyrosine Decarboxylase Apoenzyme
- **T4529** From Streptococcus faecalis (pfs) Powder.
  - Activity: One mg will release 300-400 μM CO₂ in 30 minutes at pH 5.5 at 37°C with added excess Pyridoxal Phosphate (B6).
  - 100 mg: $6.60

### SIGMA also offers a number of crude Acetone powder Decarboxylase sources. Please inquire.

C.I.F. Destination Anywhere in The World via Air

The quality of your research can well depend on the condition and reliability of your animal models. CAMM rats are certified pathogen-free and monitored microbiologically and histologically.

Write or phone for all details and prices now.
Ficoll-Paque™

Ficoll-Paque is a sterile solution of Ficoll 400 and diatrizoate sodium (density 1.077 ± 0.001 g/cc). Available in bottles with a rubber septum closure to facilitate sterile handling and in a convenient pack size (6 x 100 ml). For further details see our booklet available on request.
One of your faster pickups.

It takes a good schlurper to know one. And while our friend the anteater probably doesn’t realize it, he’s teamed up with one of the fastest pickups around.

It’s the Tilterk Cell Harvester for mixed lymphocyte cell cultures. It will harvest 96 samples in less than 5 minutes. Compare that with several hours or more for manual harvesting.

The Tilterk Cell Harvester is a compact, semi-automated unit designed to remove lymphocyte cell cultures from tubes, vials, or multi-well plates by washing and suctioning the cells from the containers, and depositing them on a fiberglass mat. The area the cells are deposited on is 9mm in diameter and retains particles down to one micron with low background counts. The Cell Harvester can be used with distilled water, saline solution, TCA, methanol, or any other organic solvent.

Unlike our friend, the Tilterk Cell Harvester is precision designed to minimize standard error, simple to operate, and requires no housebreaking.

Contact us for product literature and a demonstration — of the Tilterk Cell Harvester — of course.

If it doesn’t say Flow Laboratories, it’s not a Cell Raiser product.

SCHLURP!
Our friend, the good schlurper, has found another fast pickup to team up with... the Titertek Supernatant Collection System.

Cellular cytotoxicity assays can be performed quickly, economically, and safely with the Titertek Supernatant Collection System. Designed to facilitate the harvesting of supernatant from a standard Titertek/Linbro 96-well, U-shaped microtitration plate, the Titertek Supernatant Collection System separates the cellular components of a culture from the supernatant. Only the isotope released into the supernatant is collected.

The Titertek Supernatant Collection System is...

**Quick** Harvests 96 wells in less than 30 seconds; eliminates centrifugation of plates;

**Accurate** Collects approximately 90% of supernatant, uniformly absorbs it, avoids traumatization of cells during collection;

**Convenient** Does not remove cells during supernatant collection; Eliminates cross-contamination between wells; Prevents buildup of isotopes in equipment

**Economical** Collects most of the supernatant, permitting the use of fewer target cells and less radioactive label.

The Titertek Supernatant Collection System, one more helper from the Cell Raisers.

If it doesn't say Flow Laboratories, it's not a Cell Raiser product.

Handbook of Experimental Immunology
3rd Edition

*1,232 Pages  *597 Illustrations  *Numerous Tables  *73 Contributors

SPECIAL OFFER
SAVE $20.00

Regularly $109.00
Pay Only $89.00

Edited by D. M. Weir, M.D., Senior Lecturer in Immunology, Department of Bacteriology, University of Edinburgh.

This new 1978 edition covers all the established and innovative techniques used to understand and measure the body's resistance to disease. The detailed "how-to" presentation of laboratory procedures in experimental and applied immunology is enhanced by lucid and concise background data on the principles underlying immunologic phenomena.

• expanded coverage of the measurement of antibody affinity and the separation and characterization of lymphocytes
• new chapters on the measurement of graft (vs. host) activity, immunological methods in bacteriology, and tumor immunology
• new appendices on biometrics and mouse-breeding techniques.

Most chapters have been extensively revised to keep abreast of fast-emerging new techniques and their applications. A few chapters which appeared in the 2nd edition have been deleted in favor of more up-to-date material. Incorporating the efforts of 12 additional contributors, the 3rd edition boasts a wealth of valuable new information—featuring . . .

Step-by-step instructions show precisely how to achieve desired results with ease and accuracy. The thorough coverage of each procedure provides practical details on necessary equipment and materials; technical terminology; alternative methods; common sources of error; the analysis of test data; and more.

An abundance of well-reproduced illustrations—charts, graphs, line drawings, and photographs—elucidate the techniques and results so clearly described in the text. An extensive list of references ends each chapter, providing a handy guide to further study of each topic.

A further convenience (especially for those who are primarily concerned with only one or two of the main subjects) is the simultaneous publication of the comprehensive hardbound edition and a three-volume paperback edition. Each volume of the paperback edition contains a full list of the contents of all three volumes, as well as a complete index to the entire work.

Please ship the following book(s) for a free 10-day examination period.

A new approach in tissue culture

**Petriperm**

a novel culture dish with gas permeable membrane as cellular support

Additional advantages of the PETRIPERM membrane are:
- UV permeable 200 nm
- Suitable for high power light and fluorescence microscopy
- The membrane can be cut for cell cloning, electron microscopy, staining and documentation.
- Chemically resistant to acids, bases and organic solvents

PETRIPERM is available either with a hydrophilic surface for optimal attachment, or with a hydrophobic surface for easy detachment of adherent cells.

In the intact animal, the pH, and the partial pressure of both oxygen and CO₂ of the cell environment are under total biochemical and physiological control. This state is not even approximated by available techniques of monolayer cell culture in conventional tissue culture ware. Continuously changing gradients of these parameters in the microenvironment of cultured cells will obscure the biological significance of culture dependent phenomena.

PETRIPERM is the prerequisite for the precise control of pO₂, pCO₂ and pH in the cellular environment as gases reach the cultured cells directly through the highly gas permeable, 25 μm thick membrane.

Heraeus
CO₂-incubator
B 5060 EK/CO₂

Heraeus builds the incubator with appropriate pCO₂, pH and pO₂ control units.

IMMUNOCHEMICALS
FROM MILES?

YES, INNOVATIVE AND PROVEN PRODUCTS FOR RESEARCH AND CLINICAL LABORATORY USE.

Perhaps you think of Miles as a place to get the unusual, like antiserum to rat IgE or equine IgM.

Perhaps you know we offer a wide selection of human protein antisera encompassing newer products, such as antisera to myoglobin, ferritin and β-2 microglobulin, as well as established antisera to immunoglobulins, α-1 antitrypsin and other major serum proteins.

Of course, you may not associate us with immunocchemicals at all... We think you should.

Infection and the Compromised Host discusses the subject of immunology from a seldom-seen viewpoint. Its primary focus is on those clinical situations in which host defenses against infection are impaired. In the exposition of impaired response there is an extensive review of host defense mechanisms and current understanding of their functional significance, as well as those situations in which heritable defects or chemotherapy are associated with increased susceptibility to infectious diseases.

A multicontributor effort, with each author a recognized authority in the overlapping fields of microbiology, medicine, infectious diseases, pediatrics, dermatology, laboratory medicine, and pathology, Infection and the Compromised Host is brought together by its unifying concern with infection as a clinically important determinant of life or death in the patient who is afflicted with an impairment in his defenses.

While other texts in the field are primarily concerned with normal host defenses, Infection and the Compromised Host is not; with its comprehensive examination of impaired defense it adds a vast amount of new source material to the literature. By raising the questions it does, the state of knowledge in this crucially important medical area will be accurately characterized.

Transplantation is the journal that uses today's research to bring tomorrow into better focus

Researchers and clinicians who need to know what's going on in immunology have long looked to Transplantation to find out. In its pages can be found the vitally pertinent information you want as you look for answers to the critical problems of rejection, tissue matching, immunization, and infection.

Hematology, endocrinology, genetics, and embryology are just a few of the specialties in Transplantation's cross-disciplinary coverage. Each issue contains formal in-depth papers, as well as brief reports on research from around the world.

As a subscriber to Transplantation you can expect to find only the latest information; you will know you are getting the best news first.

WILLIAMS & WILKINS
428 East Preston Street
Baltimore, Maryland 21202

☐ Yes, enter my subscription for one year of Transplantation's monthly coverage of what's new in immunology. I enclose payment of $50.00.
