Monospecific antibodies to human immunoglobulins and immunoglobulin fractions

10-MAT  colostrum IgA, specific for α-chains
10-MSP  secretory piece of IgA
10-090  IgG, specific for γ-chains
10-00G  IgG, specific for Fc fragment
10-091  IgM, specific for μ-chains

Monospecific antibodies to Bence Jones proteins

10-9K2  kappa light chains
10-9K5  kappa light chains
A100    kappa free light chains
10-9L2  lambda light chains
10-9L5  lambda light chains
A101    lambda free light chains

Dako-Immunoglobulins
Denmark

Exclusive U.S. and Canadian Distributor:
ACCURATE CHEMICAL & SCIENTIFIC CORPORATION

STANDARDIZED REAGENTS for MICROBIOLOGICAL and LABORATORY PROCEDURES

Dehydrated and Prepared Culture Media
Tissue Culture Media, Sera & Reagents

Sensitivity Disks Carbohydrates F A Reagents Biochemicals
Stains  Dyes Peptones Amino Acids
Antigens & Antisera Hydrolysates Enzymes
Dispens-O-Disc Indicators Serological Reagents

DIFCO PRODUCTS ARE USED ROUTINELY WHEREVER MICROBIOLOGICAL PROCEDURES ARE PERFORMED

Hospital Clinical Laboratory—Microbiology, Tissue Culture, Serology.
Public Health Laboratories—water, sewage, dairy and food products.
Quality control of pharmaceutical, chemical and industrial products.
Educational and Research programs in related sciences and technology.

Difco Laboratory Products and Reagents are available through local laboratory supply dealers

Practice Makes Perfect

We know you count on your medical dictionary. That’s why we made Stedman’s 23 as perfect as we knew how.

Drawing upon the combined assets of man and computer, Stedman’s captures the total spectrum of terminology relevant to the life sciences. Each definition has been reviewed by as many as five medical specialists to ensure proper coverage for subjects in overlapping fields.

Late developments in medical research have provided more than half of the 28,000 new or revised entries. Many of these terms are so current that they were still being entered as the main vocabulary was prepared for press.

Make it your practice to use Stedman’s. We’ve made perfecting it part of ours.

April 1976, 90,257 entries, 358 illustrations with 31 color plates, 1678 pages, $26.50

PROTEINS

(From Many Species)
Chromatographically Isolated

Albumin
IgG
Transferrin

Fluorescein Conjugated Albumin
Rhodamine Conjugated Albumin

Ferritin Conjugated IgG
Fluorescein Conjugated IgG
Peroxidase Conjugated IgG
Rhodamine Conjugated IgG

Human IgG
Human IgG (Fab Fragment)
Human IgG (F(ab')2 Fragment)
Human IgM

Human Lactoferrin
Human Myoglobin
Human Transferrin
Human Whey (Milk)

Rabbit IgG
Rabbit IgG (Fab Fragment)
Rabbit IgG (F(ab')2 Fragment)

(Also available: Bovine, Goat and Sheep IgG Fab and F(ab')2 Fragments)

Specialists in Fluorescein, Rhodamine, Ferritin, Peroxidase and Custom Conjugations and of Conjugated F(ab')2, Fragments or Fab Fragments of Antiseraums.
# Low-Tox Rabbit Complement
**For Use with Mouse Lymphocytes**
- Low toxicity to mouse lymphocytes
- High complement activity
- Designed for use with cytotoxic antisera to mouse lymphocytes

<table>

# Anti-Mouse T-Cell Serum
**Rabbit Anti-Mouse Brain Associated Thy-1 Antiserum**
- Strongly cytotoxic to thymocytes and peripheral T-lymphocytes
- Thoroughly absorbed to remove cross-reactivity to B-lymphocytes

<table>

# Lympholyte-M
**For the Isolation of Viable Mouse Lymphocytes**
- Isolation of viable lymphocytes from all mouse lymphoid tissues
- Removal of dead cells in sequential cytotoxicity studies
- Removal of dead cells from lymphocyte cell cultures

<table>

# Cedarlane Cytotoxicity Medium
**For Cytotoxicity Assays Utilizing Mouse Lymphocytes**
- Medium designed specifically for use with cytotoxic antisera to mouse lymphocytes
- Contains HEPES buffer to maintain pH
- Contains BSA to reduce background toxicity

<table>

# Hemo-Lo Guinea Pig Complement
**For Sensitive SRBC Plaque Assays**
- Low background hemolysis, pre-absorbed with SRBC
- High complement activity
- For plaque assays utilizing free or haptenated SRBC

<table>

IMMUNOCHEMICALS FROM MILES?

YES, INNOVATIVE AND PROVEN PRODUCTS FOR RESEARCH AND CLINICAL LABORATORY USE.

Perhaps you think of Miles as a place to get the unusual, like antiserum to rat IgE or equine IgM.

Perhaps you know we offer a wide selection of human protein antisera encompassing newer products, such as antisera to myoglobin, ferritin and β-2 microglobulin, as well as established antisera to immunoglobulins, α-1 antitrypsin and other major serum proteins.

Of course, you may not associate us with immunochemicals at all... We think you should.

FOR MORE INFORMATION ON MILES IMMUNOCHEMICALS, CALL OR WRITE:

Miles Laboratories, Inc.

A new density gradient medium which makes centrifugation simpler, quicker and gives much greater resolution than you ever thought was possible.

- Self-generating gradients in 30 minutes or less
- Isoosmotic throughout the gradient
- Non-toxic to cells and viruses
- Does not interfere with enzyme assays or quench radioactivity
- Low viscosity for rapid isopycnic or rate zonal separations
- Suitable for cells, viruses and subcellular particles

THE GREATEST REVOLUTION SINCE THE CENTRIFUGE

New Counting System  
For The Immunology Laboratory

Hemolytic Plaques  
Nucleated Cell Counts

Leukocyte Adherence Inhibition  
Radiographic Grain Counts

ARTEK COUNTER  
MODEL 980

Large LED Readout displays the count.

Visual Display of  
Plaques Being Counted

Electronic Window displays the Counting Area.  
Position Size and Shape of  
Electronic Window determined by Operator. 
Illuminated dots above and to the right of Plaques inform  
Operator that plaques are counted.  
Assures Accuracy.

Positive tuning indicator informs Operator that  
sensitivity setting is set correctly.  
Eliminates Operator error.

Micro Counting

Expands the capability of the system; count  
nucleated cells in suspension, count  
autoradiographic grains and LAI Analysis.

Model 700 Compuprint

Greatly Expands Systems capability  
Provides Hard Copy  
Alpha Numeric Printing  
Statistical Values on data supplied by 980.

5.8ml of clear reagent in a standard pipette.
5.8ml of clear reagent in a new STRIPETTE™ pipette.

It's the color stripe, magnified by the reagent, that lets you see the meniscus easier and pipette more accurately.

Stripette serological pipettes are the first basic improvement in pipettes in years. Simple, ingenious, effective. Now you can pipette faster and more reliably.

Disposable Stripettes are available in three sizes, each with a different color stripe for quick identification: 10ml in 1/10ml, 5ml in 1/10ml, and 1ml in 1/100ml. They're sterilized, plugged, and come individually wrapped or cannister-packed.

Stripettes now make ours the most complete line of innovative, highest quality disposable plastic labware: Cluster plates, dishes, flasks, Leighton tube (the only plastic disposable one), and three sizes of easy reading serological pipettes.

Costar, 205 Broadway, Cambridge, MA 02139.

Costar is a division of Data Packaging Corp.

Free evaluation samples of Stripettes are yours for the asking. Just write to us.
INFECTION and the COMPROMISED HOST

Edited by James C. Allen, MD

Infection and the Compromised Host discusses the subject of immunology from a seldom-seen viewpoint. Its primary focus is on those clinical situations in which host defenses against infection are impaired. In the exposition of impaired response there is an extensive review of host defense mechanisms and current understanding of their functional significance, as well as those situations in which heritable defects or chemotherapy are associated with increased susceptibility to infectious diseases.

A multicontributor effort, with each author a recognized authority in the overlapping fields of microbiology, medicine, infectious diseases, pediatrics, dermatology, laboratory medicine, and pathology, Infection and the Compromised Host is brought together by its unifying concern with infection as a clinically important determinant of life or death in the patient who is afflicted with an impairment in his defenses.

While other texts in the field are primarily concerned with normal host defenses, Infection and the Compromised Host is not; with its comprehensive examination of impaired defense it adds a vast amount of new source material to the literature. By raising the questions it does, the state of knowledge in this crucially important medical area will be accurately characterized.

CURRENT TOPICS IN IMMUNOLOGY

Each volume in this outstanding series provides careful and complete coverage of the immunological approaches to its particular topic. This series clearly illustrates how modern immunological thought influences day-to-day practices in both the clinical laboratory and the ongoing practice of medicine.

Volume 1: The Practice of Clinical Immunology  
Thompson/1974/144 pages/illustrated/$16.50

Volume 2: Cancer and the Immune Response  
Currie/1974/108 pages/illustrated/$15.50

Volume 3: Blood Group Topics  
Dodd & Lincoln/1975/141 pages/illustrated/$16.50

Volume 4: Organ Grafts  
Calne/1975/80 pages/illustrated/$11.95

Volume 5: Allergic Drug Reactions  
Amos/1976/142 pages/illustrated/$17.00

Volume 6: Immunodeficiency  
Hayward/1977/215 pages/illustrated/$17.50

Volume 7: Immunology of Rheumatic Diseases: Aspects of Autoimmunity  
Maini/1977/138 pages/illustrated/$16.00
