Unlike most commercial processes which label the entire gamma globulin fraction, only the Specific Antibody fraction* of the gamma globulin is labelled in the reagents produced by Bionetics Laboratory Products. These highly specific Fluorescein Isothiocyanate labelled products contain no extraneously labelled proteins; thus, the need for counter-staining is eliminated. We urge you to evaluate these products against those you are now using.

*Purified by solid phase immunoabsorption techniques.

Goat Anti-Human IgA (α)
Goat Anti-Human IgG (γ)
Goat Anti-Human IgM (μ)
Goat Anti-Human IgG (H+L)
Goat Anti-Human IgA+IgG+IgM (H+L)
Goat Anti-Human IgG+IgM (H+L)

WHEN IT COMES TO Complement

... COME TO Cedarlane

DO YOU ABSORB YOUR GUINEA PIG COMPLEMENT WITH SHEEP RED BLOOD CELLS?

Cedarlane does and does it under carefully controlled conditions. We then test each batch thoroughly — both for the absence of background hemolysis and for high complement activity.

The result — a CONSISTENT source of absorbed guinea pig complement, with predictably low background hemolysis and predictably high complement activity. We call this product

HEMO-LO GUINEA PIG COMPLEMENT

It is particularly useful for antibody-forming cell plaque assays utilizing haptenated SRBC; in addition it assures low background in standard SRBC plaque assays. Try some. We think it will make your work a little easier.

HEMO-LO GUINEA PIG COMPLEMENT
CL 4555  5x5ml lyophilized  $60.00

In the time it takes you to read this ad you could have loaded 20 samples onto your electrofocusing gel.

That's how easy it is with LKB's Multiphor® unit. And duration of the runs is also short: the precisely engineered all-glass cooling stage means that you can apply higher power for faster runs—higher field strengths for sharper resolution. With the Multiphor unit and LKB's power supply you can do up to 48 samples in less than two hours!

Besides being the system of choice for analytical and preparative electrofocusing, the Multiphor unit is excellent for electrophoresis as well. Simply add the required kit and you're ready to work with SDS-polyacrylamide gels, agarose gels— even immuno-electrophoretic methods.

For safety the Multiphor unit is also unique. There is no metal in the cooling stage to invite short circuits, the electrode design makes it almost impossible to come into contact with high voltage, and the power supply has a safety interlock so you can connect it to your own equipment without additional risk.

If you think that a system which offers so much in speed, reproducibility, versatility and safety has to be costly, think again. The Multiphor system is one of the least expensive flat bed instruments available. Send for details today. (And be sure to ask for pertinent LKB Application Notes, a free subscription to Acta Ampholinae and information about forthcoming electrofocusing seminars and workshops.)
Pharmacia columns are precisely engineered for exceptional performance characteristics that are essential to your work. Aqueous, low pressure “K Series” and new solvent-resistant, high pressure “SR Series” columns assure ease of sample application, efficiency of component elution and flexibility in experimental conditions. Both are made from specially chosen materials to minimize destruction of labile biopolymers. And the new “SR Series” permits pressures up to 140 psi.

Pharmacia columns are perfect companions to Sephadex® and Sepharose®, long recognized as the outstanding media for separating complex biopolymer mixtures. Available in a full range of sizes, most Pharmacia columns are supplied complete with adaptors, thermostat jackets and fittings. To learn how our complete line can optimize your results, consult your Pharmacia Representative. We’re confident you will agree that the quality of your work deserves the quality of Pharmacia...columns and gels.

Do You Know Whose AGAROSE You Are Using?
Not ALL AGAROSE Are Alike!

When you buy Agarose from company A, B, C, M, P, S, etc., do you know who the manufacturer was? Will the product be the same six months from now?

With Agarose, you need consistent reproducible quality, consistency from batch to batch. It becomes important to know who the actual manufacturer is and whose Agarose you are using.

Accurate Chemical supplies unmasked Agarose with the original producers label...Litex of Denmark and IBF of France.
LITEX
The Danish Agarose
Produced from selected raw materials according to a method developed by Litex which controls the amount of charged groups resulting in a product with standardized electroendosmosis.

AA0010 Agarose Type HSA has been standardized for use in routine immunoelectrophoretic procedures. Electroendosmosis is moderate (Mr = 0.13) which gives very sharp precipitation lines. Gelling temperature of a 2% solution is 42°C.

AA0020 Agarose Type HSB is similar to the HSA-type and can be used for the same purpose. The difference is a lower electroendosmosis (Mr = 0.10).

AA0030 Agarose Type HSC the electroendosmosis is extremely low (Mr = 0.02) and is mainly used in scientific work.

AA0040 Agarose Type LS the LS-types differ from the HS-types in that they have a lower gelling temperature (2% solution sets into a gel at 35-36°C). Electroendosmosis is relatively high (Mr = 0.25).

AA0050 Agarose Type LSB for applications where low gelling temperature, 35°C and low electroendosmosis, Mr = 0.04 is required.

AA0060 Agarose Type HSIF excellent support medium. "Free from Electroendosmosis", produces a gel with high porosity, excluding molecular sieving effect and is non-toxic. For isoelectric focusing, isotachophoresis and gel electrophoresis.

AA0070 Agarose HSB Modified Type. Excellent for applications where "Low Syneresis" is required.

IBF
Indubiose
The French Agarose:
The inert character of Indubiose eliminates any danger of interference with chemical and biological substances.

AA0111 Indubiose A37 for electrophoresis and immunology applications with a gelling temperature of 37°C.

AA0113 Indubiose A45 for use in bacteriology and virology work. The gelling temperature is 45°C.

AA0115 Indubiose HAA37
AA0117 Indubiose HAA45-Both of the HAA grades of Indubiose Agarose are special for Australia Antigen research.

THE ROCKEFELLER FOUNDATION
RESEARCH CAREER DEVELOPMENT
FELLOWSHIPS IN GEOGRAPHIC
MEDICINE

The Rockefeller Foundation announces the second annual competition for research career development awards of five years' duration including salary, laboratory support, and travel for investigators interested in the great neglected diseases of mankind (primarily the tropical infectious diseases). These diseases are great in terms of the vast number of individuals involved and neglected with respect to both funding and lack of interest by the biomedical research community.

The Rockefeller Foundation has established a network of research groups in this area which at present includes departments of medicine, pharmacology, and immunology in medical schools and research institutes in the United States, Great Britain, Australia, Israel, and Egypt. A critical mass of institutions now afford significant career opportunities in this field. To provide necessary career incentive, two five-year fellowships are granted annually to outstanding young investigators who have established their scientific ability by the quantity and quality of their research and by a demonstrated interest in the great neglected diseases. The deadline for receipt of grant proposals will be June 15, 1979.

For more detailed information, please write to: Kenneth S. Warren, M.D., Director, Division of Health Sciences, The Rockefeller Foundation, 1133 Avenue of the Americas, New York, N.Y. 10036.

Peristaltic Pump P-3

A compact pump electronically controlled for constant liquid flows in chromatography and gradient formation

You can
- obtain three different flow rates at the same time through the three individually tensioned pumping channels
- change tubes in seconds with the snap-in cassette
- forget about pulsation thanks to the large driven rollers
- rely on a constant motor speed, electronically compensated for load and temperature
- use any flow rate between 0.6 and 400 ml/h per channel with the same gear box
- reverse the flow instantly
- push for maximum flow and clear pump lines rapidly
Seek peaks at 206 nm and get up to 200x the sensitivity of monitoring at 280 nm...

...with the new Uvicord S UV monitor

Sensitivity is increased up to 200x for proteins when you monitor at 206 nm with LKB’s new Uvicord® S UV-monitor. This unique instrument will detect non-aromatic peptides, polysaccharides, nucleotides, lipids and steroids as well as proteins. And, naturally, you can also monitor at 254 or 280 nm.

Enhanced versatility has required no compromise in stability. Quite the contrary. Sophisticated optics and solid state circuitry provide outstanding linearity. And you can monitor simultaneously at high and low sensitivities.

Unlike others, the new Uvicord S UV-monitor is contained in a single small case which mounts easily on a fraction collector or ring stand. And its low price matches its small size.

Contact LKB today for full details.

Announcing powerful discounts on powdered media.

There are still some people in the industry yet to discover the excellent quality of GIBCO Laboratories products.

We'd like to encourage them to find out. Because we're convinced that once they do, they'll be customers for life.

So we're offering, for a limited time only, tremendous savings on powdered media. (Regular customers are also eligible for the discount.)

It's exactly the same powdered media we always offer. Prepared to GIBCO's high standards for quality control.

To find out how you can save on powdered media, call your GIBCO representative today. Because top quality at a discount price is a powerful argument for buying from GIBCO.

GIBCO LABORATORIES

Gel filtration and Affinity chromatography even in 6M GuHCl, organic solvents, 8M urea, 3M KSCN at pH3, pH12, 80°C

CROSS-LINKED SEPHAROSE is a new beaded agarose chromatographic medium with exceptional stability and extremely low non-specific adsorption. It can be used with confidence in the most extreme dissociating media including strong solutions of urea, guanidine hydrochloride and chaotropic salts. Sepharose CL can also be used in organic solvents.

You can sterilize Sepharose CL repeatedly by autoclaving at 110°C - 120°C. Cross-linked Sepharose is available in three types: Sepharose® CL-2B, CL-4B and CL-6B.

Ask for the free booklet with data and details of new techniques, from your supplier of Sephadex® Sepharose® and other separation media.

For culture of anchorage-dependent cells

Sterile, Ready-to-use

Superbead Microcarriers...

NOW! Available from the Cell Raisers at Flow Laboratories a NEW product for growing anchorage-dependent cells...
- sterile, ready-to-use hydrated beads in phosphate buffered saline without Ca or Mg
- provides LARGE surface area in relatively small space
- composed of diethylaminoethyl (DEAE) anion exchange groups bound to a dextran matrix as described by Levine et al. 1
- reduces media/sera requirements
- reduces incubator space needed
- developed at Massachusetts Institute of Technology (patent pending)
- Potential use in the production of...
  - viruses 2
  - viral vaccine 3,4
  - hormones 3,4
  - interferon 3,4
  - biological pesticides 3,4

If it doesn’t say Flow Laboratories, it’s not a Cell Raisers product.
When you need agarose—one of ours is sure to meet your requirements.

Perhaps you need a high electroendosmosis (EEO) for counter-immunoelectrophoresis? Either HEEO Agarose or Agarose (HE) should be suitable.

Perhaps you require a high gel strength, low EEO agarose for zone electrophoresis or electroimmunodiffusion? HGT Agarose or Agarose (LE) should be ideal.

You may require extremely high purity like that of HGT(P) Agarose, or an exceptionally low gelling temperature like that of LGT Agarose (GT=28°C), or perhaps an agarose that exhibits minimum binding to borate buffers as does HGT Agarose.

On the other hand, you may only want a high quality, general purpose product of consistent manufacture, such as Agarose (ME).

Research Products is pleased to offer seven different and highly characterized preparations manufactured by Marine Colloids, Inc. and distributed through our offices around the world.

For specifications and prices in various package sizes call or write the office nearest you.

The Teklad Test Diets catalog has become a bible to laboratory personnel throughout the country. And with good reason. It contains an enormous selection of finished diets, plus diet ingredients, mineral mixtures, vitamin mixtures, and more.

The catalog is built on a foundation of information and expertise developed from more than thirty-five years in the animal test diet business.

So you can be assured of the quality of our products as well as the selection of test diets available.

To get this important publication and accompanying price list in your hands as soon as possible, write or call.

Fluorescence, light scatter, cell sorting.

Coulter has a family of compact, reliable instruments that can help you investigate a wide range of cytochemical, histochemical and immunological characteristics. They are the COULTER® Model TPS Cell Sorters.

Select from 5 watt, 2 watt, or 0.1 watt lasers, one or two color analysis, UV capability and other features to meet your research needs.

Study immunological response, the DNA or protein content of a cell, its surface structure, whether it is alive or dead, how big it is and many other things based on laser-induced fluorescence and/or light scattering.

TPS Systems analyze at rates up to 10,000 cells per second. They also physically sort out cells of interest based on operator-selected parameters at rates up to 4,000 cells per second.

Let us demonstrate the TPS System's flexibility and simplicity in your lab.

For a demonstration or more information on the COULTER® TPS family, just fill out the coupon below and return it to us, or call the Coulter office nearest you.

Yes, I am interested in hearing more about the COULTER® TPS Cell Sorters.

☐ Please arrange a demonstration in my laboratory.

☐ Send me more information right away.

We’re all using it!

Pharmalyte™, the new ampholyte

Pharmalyte is part of a new integrated system for flat bed isoelectric focusing, electrophoresis and immunoelectrophoresis. Find out more about Pharmalyte and the Pharmacia Flat Bed System – today!

Pharmalyte gives you:
- Convenient and stable gradient intervals without mixing
- More resolution. Over 1000 high buffering capacity ampholytes per pH interval
- Less risk of local “hot-spots” and overheating because the conductivity is even across the whole gradient
- Easier recovery of proteins. Pharmalyte doesn’t contain high molecular weight contaminants.

Pharmalyte is a series of new and unique carrier ampholytes developed entirely within the research laboratories of Pharmacia Fine Chemicals to give you superior resolution in isoelectric focusing.

“See us at the American Society for Microbiology Show – Booths E18, E19”
If it isn't a Napco®, you may be reading the temperature in the water jacket...not the chamber.

The Napco 7000 series are the only water jacketed automatic CO₂ incubator that actually tells you the temperature of the chamber, where your important experiment is taking place.

All other water jacketed automatic CO₂ incubators read the temperature of the water, not the chamber environment. If your research is temperature sensitive, reading the exact temperature of the chamber is critical.

For accuracy and reliability, insist on the Napco 7000 models. They are the most advanced incubators on the market. Available in single or space saving vertical models. There's much more. Write for brochure.

If you should ever have an equipment breakdown...a Heinicke/Napco Minute Man will be on his way to you in 48 hours.

You'll seldom need the Minute Man service, because Heinicke and Napco instruments are built to work. But if you do, dial toll-free 800-327-9783.
