Spot the Difference

Sephacryl®
the different medium for gel filtration

- Faster separations: Sephacryl has speed and resolution to spare; separates proteins 5–10 times faster than conventional media.

- Faster packing: Sephacryl is pre-swollen, ready-to-use and packs fast.

Use Sephacryl S-300 Superfine for separations up to an exclusion limit of 1.5 million for globular proteins; ideal for serum proteins. Use Sephacryl S-200 Superfine up to an exclusion limit of 250,000 for globular proteins.

When you use Sephacryl, the difference is clear. Find out more about Sephacryl from your usual supplier of Sephadex®, Sepharose® and other separation media.
Alkaline phosphatase and peroxidase conjugated specific swine antibodies to:

- Human Immunoglobulin G
- Human Immunoglobulin M
- Human Immunoglobulin A

These products are concentrates and are available in 1 and 5 ml. vials. Antibodies used for conjugates are purified by affinity chromatography. Our research quality immunological reagents feature high antibody levels and less than 10% titer variability lot to lot. Medical Technology Corporation phosphatase conjugated anti-immunoglobulins have been prepared from purified alkaline phosphatase (Type VII) of calf intestine and pure, high avidity antibodies isolated by immunosorbents from Medical Technology Corporation though the specificity, avidity and excellent purity of our products is considered to be among the best in the U.S. and Europe, our cost on an antibody protein basis is one of the most reasonable. Our immunodiagnostic reagents include:

- Nephelometric quality antisera featuring extremely low turbidity and high avidity
- Monospecific antisera to human proteins

Our extensive virological antigen line includes:

- High titer complement fixation antigens and controls featuring Cytomegalo, Influenza A and B, Mycoplasma pneumoniae and eleven other hard to find viral materials.
- High titer haemagglutinating antigens which include a very clean Rubella preparation with a standard titer of 1:256.
- Reference sera — Thirteen antiviral control sera.

Our constantly expanding selection of virological and immunological materials is fully described in our new catalog. Write or call for your copy today.
A New Book with a Specific Focus and a Broad Appeal

PRINCIPLES AND MANAGEMENT OF UROLOGIC CANCER

Edited by Nasser Javadpour, MD, Senior Investigator and Head of Urology, National Cancer Institute

Principles and Management of Urologic Cancer is a new book that provides a much needed authoritative and comprehensive compendium in which the field of urological oncology is analyzed in cross-section.

The basic principles of etiology, epidemiology, pathogenesis, and principles of immunobiology, chemotherapy, radiation therapy, and nuclear medicine as treatment modalities are explicitly discussed through the expert knowledge of twenty-one contributing specialists.

After providing an important foundation for the reader, the book then focuses on cancer of specific organs, including adrenal, kidney, bladder, and the male genital system in children and adults. Each individual neoplasm is analyzed separately.

The authors have admirably covered all aspects of this rapidly developing field, including such important new areas as use of the tumor marker in cancer, the radioimmunoassay and prospective randomized clinical trials for the selection of the most effective treatment approach, and surgical treatment of problems, to provide the reader with an understanding of the broad scope of oncology and a detailed understanding of each separate malignancy. In addition, a statistical analysis of cancer pertinent to the clinician is also presented. Principles and Management of Urologic Cancer should be part of the library of every practicing urologist, oncologist, and clinician who deals with problems in genitourinary cancer.

1979/about 536 pages/202 illustrations/about $59.00
We know you count on your medical dictionary. That’s why we made Stedman’s 23 as perfect as we knew how.

Drawing upon the combined assets of man and computer, Stedman’s captures the total spectrum of terminology relevant to the life sciences. Each definition has been reviewed by as many as five medical specialists to ensure proper coverage for subjects in overlapping fields.

Late developments in medical research have provided more than half of the 28,000 new or revised entries. Many of these terms are so current that they were still being entered as the main vocabulary was prepared for press.

Make it your practice to use Stedman’s. We’ve made perfecting it part of ours.

April 1976, 90,257 entries. 358 illustrations with 31 color plates. 1678 pages. $26.50
