Fluorescence, light scatter, cell sorting.

Coulter has a family of compact, reliable instruments that can help you investigate a wide range of cytochemical, histochemical and immunological characteristics. They are the COULTER® Model TPS Cell Sorters.

Select from 5 watt, 2 watt, or 0.1 watt lasers, one or two color analysis, UV capability and other features to meet your research needs.

Study immunological response, the DNA or protein content of a cell, its surface structure, whether it is alive or dead, how big it is and many other things based on laser-induced fluorescence and/or light scattering.

TPS Systems analyze at rates up to 10,000 cells per second. They also physically sort out cells of interest based on operator-selected parameters at rates up to 4,000 cells per second.

Let us demonstrate the TPS System's flexibility and simplicity in your lab.

For a demonstration or more information on the COULTER® TPS family, just fill out the coupon below and return it to us, or call the Coulter office nearest you.

Yes, I am interested in hearing more about the COULTER® TPS Cell Sorters.

☐ Please arrange a demonstration in my laboratory.

☐ Send me more information right away.

If it isn't a Napco®, you may be reading the temperature in the water jacket ...not the chamber.

The Napco 7000 series are the only water jacketed automatic CO₂ incubators that actually tell you the temperature of the chamber, where your important experiment is taking place.

All other water jacketed automatic CO₂ incubators read the temperature of the water, not the chamber environment. If your research is temperature sensitive, reading the exact temperature of the chamber is critical.

For accuracy and reliability, insist on the Napco 7000 models. They are the most advanced incubators on the market. Available in single or space saving vertical models. There's much more. Write for brochure.

If you should ever have an equipment breakdown... a Heinicke/Napco Minute Man will be on his way to you in 48 hours.

You'll seldom need the Minute Man service, because Heinicke and Napco instruments are built to work. But if you do, dial toll-free 800-327-9783.

Available at the following dealers:
- Curtin-Matheson

ANTIGEN SYSTEM: la
DONOR-RECIPIENT COMBINATION: A.TH anti-A.TL (congenic)
SPECIFICITY: Ia' anti-Ia'
DONOR-RECIPIENT H-2 REGION INCOMPATIBILITIES: I-A, B, E, C
FEATURES: Excellent cytotoxic titer
Specific
Complete specifications included

CL 8701 1 ml, lyophilized $50.00

Note: All cytotoxic titrations are carried out with Cedarlane Low-Tox-M rabbit complement as the source of complement.
To insure comparable results, we recommend use of this source of complement.

LOW-TOX-M RABBIT COMPLEMENT
For use with mouse lymphocytes

Now Still

with higher complement activity
tested with alloantisera as well as heteroantisera
recommended concentrations for use with different antisera are included
with low background toxicity to mouse lymphocytes, including thymocytes

CL 3051 5 x 1 ml, lyophilized $30.00

LYMPHOLYTE-M
For the isolation of viable mouse lymphocytes

* THE cell separation medium designed for use with MOUSE lymphocytes
* HIGH RECOVERY of lymphocytes from all mouse lymphoid tissues
* No selective loss of T-cells (as found with other cell separation media)
* Particularly useful for isolation of splenic lymphocytes
* Can be used for removal of dead cells in sequential cytotoxicity studies

CL 5030 5 x 30 ml, sterile $50.00

The Only Complete Line of Anti-Mouse T-Cell Reagents

Available

For:
- Identification and quantitation of T-cells by Direct and/or Indirect FA methods.
- Investigations concerning the role of mouse T-cells in cellular immunity.
- Studies of anti-tumor, anti-viral, or anti-bacterial immunity where identification or elimination of T-cells is required.

Mouse AKR Anti-C3H (Thy 1.2) Ascites
Mock Mouse Anti-Theta Ascites (Control)
Mouse Anti-C3H (Thy 1.2) Gamma Globulin
Mouse AKR Anti-C3H (Thy 1.2) Serum
Mock Mouse Anti-Theta Serum (Control)
Rabbit Anti-Mouse Brain (C3H), Adsorbed
Rabbit Anti-Mouse Brain (C3H), Unadsorbed
Rabbit Anti-Mouse Brain (C3H), Adsorbed, Fluorescein conjugated
Rabbit Anti-Mouse Brain (BALB/c), Adsorbed
Rabbit Anti-Mouse Brain (BALB/c), Unadsorbed
Rabbit Anti-Mouse Brain (BALB/c), Adsorbed, Fluorescein conjugated

IN ADDITION:
Guinea Pig Complement with Diluent (Pre-tested for optimal performance in anti-theta cytolytic procedures)

Each lot of anti-theta is precisely characterized by specific cytolytic activity and effect on mitogenic response.

These reagents are for research use only and are not for use in humans nor for diagnostic or therapeutic purposes.

Please write for our Current Price List and Catalog.

Pharmacia columns are precisely engineered for exceptional performance characteristics that are essential to your work. Aqueous, low pressure "K Series" and new solvent-resistant, high pressure "SR Series" columns assure ease of sample application, efficiency of component elution and flexibility in experimental conditions. Both are made from specially chosen materials to minimize destruction of labile biopolymers. And the new "SR Series" permits pressures up to 140 psi.

Pharmacia columns are perfect companions to Sephadex® and Sepharose®, long recognized as the outstanding media for separating complex biopolymer mixtures. Available in a full range of sizes, most Pharmacia columns are supplied complete with adaptors, thermostat jackets and fittings. To learn how our complete line can optimize your results, consult your Pharmacia Representative. We're confident you will agree that the quality of your work deserves the quality of Pharmacia...columns and gels.
Thy-1

A new Monoclonal antibody from somatic cell hybridization

With specificity for the Thy-1.2 antigen of mice. This new Olac antibody is an excellent T cell depleting reagent for studies in immunology, cancer, transplantation, teaching and cell biology. Cytotoxic titer to 1:1,000,000.

- Clone F7D5 IgM from an AKR anti-CBA thymocyte response.
- Specificity is directed at the THY-1.2 alloantigen by tissue distribution and THY-1 congenic analyses.
- Function F7D5 antibody and complement abolishes T-cell activity in spleen and lymph node cells assayed in vivo or in vitro for helper and suppressor functions. It kills cytotoxic T-cells and abolishes Con-A responses leaving B-cell functions unaffected.
- Titer for preparative depletions 1/10 to 2.0 microlitres lyse 10^7 peripheral T-cells in Guinea pig or Rabbit complement.
- Reliability large scale production, strict quality control and phased renewal of tumour from frozen stocks assure reliability. All products are lyophilized.
- Economy Savings in cost of about 1000 fold when compared with conventional antisera and absorptions are not required.

ANNOUNCEMENT

The Second International Conference on Diagnostic Immunology will be held from August 5 through August 10, 1979 at New England College, Henniker, New Hampshire. The conference, which is sponsored by the Engineering Foundation, will focus on two major themes:

1. The application of immunological techniques to the diagnosis of disease;
2. Progress in new immunological techniques.

Sessions will be divided into seven major topics of interest including: hormones, infectious diseases, immunologically mediated diseases and receptors. Dr. G. Omenn, presidential advisor, will deliver an address. The symposium is primarily reserved for invited principal contributors. However, sessions have been set aside for unsolicited papers. English will be the language used for all presentations. The symposium will be limited to 150 participants. Selection of participants will be based on their participation in the conference and on maintenance of a balance for hospital, industry and the academic community. Applications may be obtained from the Engineering Foundation, 345 East 47 Street, New York, NY 10017. For further information concerning the conference program, contact Dr. G. Odstrchel, Conference Co-chairman, Corning Glass Works, Sullivan Science Park, Corning, NY, 14830.

PURIFIED ANTIBODES
THE ELEGANT WAY

PREPARED BY
AFFINITY CHROMATOGRAPHY
IDEAL FOR LABELING

TAGO employs the most modern and rigorous production technology and quality control to assure consistently superior products:

- Produced in goat
- Only normal human serum proteins used for immunization
- Contain no human serum proteins purified by solid phase immunoadsorption
- The immunologically-reactive IgG portion of the goat serum is isolated by affinity chromatography

TAGO fluorescein-conjugates from purified antibodies offer these advantages:

- High F/P ratios
- High specific reactivity
- High antibody titer
- Low background staining

The following purified antibodies are now available unlabeled and as fluorescein-conjugate:

- Anti-Human IgG
- Anti-Human IgA
- Anti-Human IgM
- Anti-Human Kappa*
- Anti-Human Lambda*

*Produced against the Fab fragment with the Fd portion absorbed out

Also available soon — F(ab')2 — conjugates produced from purified antibodies.

For further information write or call TAGO.

Cellulose ion exchangers should be spherical too

DEAE-Sephacel® is

The spherical form of DEAE-Sephacel gives you easy, uniform packing without the generation of fines. It improves your results because it reduces zone broadening and ensures uniform, high flow rates. DEAE-Sephacel is reproducible from batch-to-batch.

No precycling is needed because DEAE-Sephacel is ready swollen. Its controlled macroporous structure, which is almost completely independent of pH and ionic strength, gives high protein capacities and excellent recoveries.

DEAE-Sephacel is the only spherical cellulose ion exchanger.
Seek peaks at 206 nm and get up to 200x the sensitivity of monitoring at 280 nm...

...with the new Uvicord S UV monitor

Sensitivity is increased up to 200x for proteins when you monitor at 206 nm with LKB's new Uvicord® S UV-monitor. This unique instrument will detect non-aromatic peptides, polysaccharides, nucleotides, lipids and steroids as well as proteins. And, naturally, you can also monitor at 254 or 280 nm.

Enhanced versatility has required no compromise in stability. Quite the contrary. Sophisticated optics and solid state circuitry provide outstanding linearity. And you can monitor simultaneously at high and low sensitivities.

Unlike others, the new Uvicord S UV-monitor is contained in a single small case which mounts easily on a fraction collector or ring stand. And its low price matches its small size.

Contact LKB today for full details.

"See us at the Tissue Culture Association Meeting"
In the time it takes you to read this ad you could have loaded 20 samples onto your electrofocusing gel

That's how easy it is with LKB's Multiphor® unit. And duration of the runs is also short: the precisely engineered all-glass cooling stage means that you can apply higher power for faster runs—higher field strengths for sharper resolution. With the Multiphor unit and LKB's power supply you can do up to 48 samples in less than two hours!

Besides being the system of choice for analytical and preparative electrofocusing, the Multiphor unit is excellent for electrophoresis as well. Simply add the required kit and you're ready to work with SDS-polyacrylamide gels, agarose gels — even immunoelectrophoretic methods.

For safety the Multiphor unit is also unique. There is no metal in the cooling stage to invite short circuits, the electrode design makes it almost impossible to come into contact with high voltage, and the power supply has a safety interlock so you can connect it to your own equipment without additional risk.

If you think that a system which offers so much in speed, reproducibility, versatility and safety has to be costly, think again. The Multiphor system is one of the least expensive flat bed instruments available. Send for details today. (And be sure to ask for pertinent LKB Application Notes, a free subscription to Acta Ampholineae and information about forthcoming electrofocusing seminars and workshops.)

LKB Instruments Inc.
12221 Parklawn Drive Rockville, MD 20852
301: 881-2510

This gel took just one minute to prepare

You know that electrofocusing is a fast, high resolution separation method. But did you know that LKB can provide you with ready made electrofocusing gels? Gels which are so easy to use, you're ready to apply samples in less than one minute.

LKB's Ampholine® PAGplate® gels provide excellent reproducibility too. You can run up to 48 samples simultaneously under identical conditions.

And Ampholine PAGplate gels are also economical. You can use as little as you like and store the rest—no need to use an entire plate. They save you the time and effort of preparation and give results in as little as 1.5-3 hours.

Ampholine PAGplate gels now come in four different pH ranges. For full details contact LKB today.

Announcing powerful discounts on powdered media.

There are still some people in the industry yet to discover the excellent quality of GIBCO Laboratories products.

We’d like to encourage them to find out. Because we’re convinced that once they do, they’ll be customers for life.

So we’re offering, for a limited time only, tremendous savings on powdered media. (Regular customers are also eligible for the discount.)

It’s exactly the same powdered media we always offer. Prepared to GIBCO’s high standards for quality control.

To find out how you can save on powdered media, call your GIBCO representative today. Because top quality at a discount price is a powerful argument for buying from GIBCO.

Now Improved
Lab-Tek®
Tissue Culture
Chamber/Slides

There's no more economical, more flexible means of preparing, examining and storing cell cultures than with miniature Lab-Tek® Chamber/Slides.

Up to 8 (start to storage) tissue cultures may be quickly handled on each standard 1" x 3" glass slide. Individual sterile chambers are sealed with a new no-leak, removable gasket.

Your uses for the Chamber/Slide in the growth, testing and retention of cell monolayers and virology studies are virtually unlimited.

Versatile multiple-chamber construction is ideal for culturing different strains on the same slide... and for stopping and staining individual cell chambers at any stage. There's no need to transfer cells, either. Permanent records can be made on the slide itself.

Economical Lab-Tek Chamber/Slides also hold your expenses down by saving up to 70% in cells and nutrients. Each miniature chamber is approximately 0.9cm square and holds 0.2 to 0.4ml volume. Also available in 1-, 2-, and 4-chamber versions pre-packed in sterile incubation trays.

For more complete information contact Lab-Tek Division of Miles Laboratories, 30 W. 475 North Aurora Road, Naperville, Illinois 60540 or...

Stop in the Lab-Tek Booth at your Convention and see a complete demonstration of how Lab-Tek Chamber/Slides can save time and money for you and your laboratory.

Lab-Tek®

TCA Convention - Seattle/June 10.
Now you can have it both ways!

Pharmacia Dual Path Monitor UV-2

has a unique flow cell with two optical path-lengths for new versatility in UV-monitoring.

• Monitor absorbance quantitatively up to 20 OD units full scale with a sensitivity of 0.005 OD units full scale at the same time, in the same run.

• Monitor at 254 nm and/or 280 nm with two completely independent measuring systems.

The Dual Path Monitor UV-2 has all the other features you expect of a high performance monitor: stability, cold room operation convenience and compact design. For less-demanding applications you can choose the Pharmacia Single Path Monitor UV-1 with a choice of 3 mm or 10 mm flow cell and operation at 254 nm or 280 nm.

Find out more about the practical advantages of column monitoring with the UV-2 and UV-1 Monitors. Ask about the Pharmacia Recorders too.
CURRENT TOPICS IN IMMUNOLOGY

State-of-the-art cell sorting and analysis

Ortho announces the most powerful, precise, and versatile instrument for cell sorting and analysis ever available commercially: the Ortho Cytofluorograf™ System 50. It combines a rapid cell sorter (based on the electrostatic droplet deflection principle) with a flexible, wide-ranging analysis package in a single versatile unit.

Ortho System 50 for analysis.

Its dual-laser excitation system provides three modes of excitation. There are two single individual excitation sources for different purposes: a .8 milliwatt helium-neon laser for ultra-high-precision scatter measurements, and a 5-watt argon laser for fluorescence measurements.

There are four detectors: two are photomultiplier tubes for broad visible-range response, two are solid-state photo sensors for axial light loss and narrow forward-angle scatter. A photomultiplier tube provides for measuring wide-angle scatter.

12 measurement parameters.

The System 50 Cytofluorograf permits for the first time yielding of morphological information by a flow cytometric instrument. Because pulse height analysis, pulse area analysis, and pulse width analysis can be selected for every detector output, a total of 12 distinct measurement parameters is available with the System 50. Other features of the system include two bi-dimensional regions of interest, dual histogram multi-channel analyzer with cytogram mode, ultra-sensitive optics, and easy sample entry.

Complete details of System 50 are available in a new brochure from your Ortho representative or direct from Ortho Instruments.

Protocols No. 26: Determination of Purity of Yeast Cells

We would like to bring your attention to an interesting application note contributed by Dr. K. J. Hutter of the Frauenhofer Gesellschaft Institute for Aerobiology, West Germany, No. 26 in the Ortho Protocols series, which describes an immunofluorescent method for differentiating wild strains of yeast cells in cultured yeast using the Cytofluorograf. This method makes available a rapid and precise assay of the degree of contamination.

For a copy of Protocols No. 26, write or call Ortho Instruments.
You Can't Afford

Bacterial Contamination

in your cell cultures

Protect them with GRS

• Broad Antibacterial Spectrum
  —Broader than pen/strep combined

• Protection Against Mycoplasmas
  —Protects against 29 strains of mycoplasmas

• Extraordinary Stability
  —Completely stable for long periods under cell culture conditions
    —Can actually be autoclaved!

• Lack of Cytotoxicity
  —Minimal effect on most cell lines at bactericidal levels

• Cost Effective
  —Protection for less than 6¢ per T75 flask (20 ml with GRS at 50mcg/ml)

Get the protection you need, without unnecessary risk to your valuable cell cultures with:

GRS Gentamicin
Reagent Solution

the antibiotic of choice for cell culture

Sterile, ready to use solution
GRS 10 mg/ml (6 x 10 ml vials/bx) $36.00/bx
GRS 50 mg/ml (10 ml vial) $28.50/vial

Transplantation is the journal that uses today's research to bring tomorrow into better focus

Researchers and clinicians who need to know what's going on in immunology have long looked to Transplantation to find out. In its pages can be found the vitally pertinent information you want as you look for answers to the critical problems of rejection, tissue matching, immunization, and infection.

Hematology, endocrinology, genetics, and embryology are just a few of the specialties in Transplantation's cross-disciplinary coverage. Each issue contains formal in-depth papers, as well as brief reports on research from around the world.

As a subscriber to Transplantation you can expect to find only the latest information; you will know you are getting the best news first.

WILLIAMS & WILKINS

Cornerstone references for the up-to-date medical library

THE NEW GRANT'S ATLAS OF ANATOMY, 7th edition AND STEDMAN'S 23

THE NEW GRANT'S ATLAS, 7th edition

For 35 years and through 6 editions, GRANT'S ATLAS OF ANATOMY has been in continuous use by practicing professionals all over the world. GRANT'S has become more than a classic reference. It is a tradition.

The new GRANT'S ATLAS is the most reliable source for accurate anatomical information available. It will bring your reference section up-to-date and soon be one of your most widely used books. That's a big responsibility for one book to bear, and no other anatomy atlas bears it so well as GRANT'S.

The new GRANT'S ATLAS now
• is divided into 10 sections, each color coded, and each with its own table of contents
• is reorganized to follow the normal sequence of dissection
• includes radiographs and arteriograms to enhance its clinical relevance
• is a completely rewritten text — in more conversational syntax
• contains new material on the autonomic nervous system
• contains even more generous use of color throughout
• contains an all new section on fetal anatomy
• is printed in a larger typeface for increased readability

There is no idealized anatomy in GRANT'S; the color-keyed drawings are not artists' conceptions. They are made from tracings of actual cadaver sections, and they are as accurate as it is possible to be outside of the laboratory.

1978/608 pages/891 illustrations (627 in full color)/$32.00

The latest edition of STEDMAN'S MEDICAL DICTIONARY ILLUSTRATED has set a new standard for excellence.

Drawing upon the combined assets of man and computer, STEDMAN'S 23 captures the total spectrum of terminology relevant to the life sciences.

Up-to-date and accurate definitions along with outstanding illustrations and the best cross-indexing system yet devised, make STEDMAN'S 23 an extraordinary and indispensable reference for both student and professional.

1976/1678 pages/358 illustrations (including 31 color plates)/$27.50

THE GRANT/STEDMAN PACKAGE
