Bionetics does it for you.

Lymphocyte Separation Medium (LSM®)

Convenient One-Step Centrifugation Method
1. Layer diluted blood on LSM.
2. Centrifuge for 30-40 min., 18-20°C, 400 x g.
3. Aspirate and discard plasma layer
4. Harvest lymphocyte layer.

Quality Control Assurance
Each lot is tested for:
- Lymphocyte separation and recovery.
- Lymphocyte viability.
- Sterility.
- Consistent density (1.077-1.080 at 20°C).

Packaging
- Packaged in amber, screw-cap bottles.
- 5 x 100 ml bottles per carton.

Storage
- Stored at room temperature.

A cytotoxic antibody is only as good as the complement with which it is used.

Get the most out of your high quality cytotoxic antibodies with

LOW-TOX-M RABBIT COMPLEMENT

LOW TOXICITY  HIGH ACTIVITY

Regardless of the source of antibody, LOW-TOX-M is the complement of choice for cytotoxicity techniques with mouse lymphocytes. This reagent provides an excellent source of complement when used with HETEROANTISERA, ALLOANTISERA, and MONOCLONAL ANTIBODIES directed against mouse lymphocyte cell surface antigens. We include recommended concentrations for use with antisera directed against Thy-1, Ly, la, and H-2 antigens.

Presentation:  CL 3051  5 x 1 ml, lyophilized $30.00

Pharmacia Peristaltic Pump P-3

A compact pump electronically controlled for constant liquid flows in chromatography and gradient formation

You can
- obtain three different flow rates at the same time through the three individually tensioned pumping channels
- change tubes in seconds with the snap-in cassette
- forget about pulsation thanks to the large driven rollers
- rely on a constant motor speed, electronically compensated for load and temperature
- use any flow rate between 0.6 and 400 ml/h per channel with the same gear box
- reverse the flow instantly
- push for maximum flow and clear pump lines rapidly
A NEW DIMENSION ADDED TO CELLULAR RESEARCH:
MONOCLONAL ANTI-THY 1.2
FOR IDENTIFICATION, LOCATION, AND ISOLATION OF MOUSE T-CELL LYMPHOCYTES.

Typical cytotoxic activity of NEN Anti-Thy 1.2 antibody and conventional Anti-Thy 1.2 antiserum on $^{51}$Cr-labeled A/J thymocytes and A. Thy 1.1 thymocytes. (Antibody dilutions were each incubated with guinea pig complement and $1.25 \times 10^5$ $^{51}$Cr-labeled thymocytes).

New England Nuclear, the world's leading manufacturer of radioactive chemicals for research, presents a new tool for immunological studies of cellular systems. It is an extraordinarily specific antibody with greatly increased affinity for cell surface antigen, useable at titers of $1:10^6$ in an efficient and rapid technique.

Anti-Thy 1.2 is available from New England Nuclear in two concentrations: as ~1mg immunoglobulin (Cat. No. NEI-001) or ~0.1mg immunoglobulin (Cat. No. NEI-001A), both supplied in 1ml of buffer solution. For prices and further information, please return the coupon or call toll free 800-225-1572.

Definitive Sources in Immunology

CLINICAL IMMUNOLOGY UPDATE:
Reviews for Physicians
1979 Edition
Editor in Chief: Edward C. Franklin, M.D., Professor of Medicine, Director, Irvington House Institute; Chairman, Rheumatic Diseases Study Group, New York University Medical Center
Editorial Board: Rebecca H. Buckley, Duke University; Deborah Doniach, The Middlesex Hospital Medical School, London; John L. Fahey, University of California, Los Angeles; Charles W. Parker, Washington University, St. Louis; and Wendell F. Rosse, Duke University
1979 320 pages $24.95 0-444-00312-6

DEVELOPMENTS IN IMMUNOLOGY
Volume 1 Genetic Control of Autoimmune Disease
Proceedings of the Workshop on Genetic Control of Autoimmune Disease
July 10-12, 1978, Bloomfield Hills, Michigan
edited by Noel R. Rose, Pierluigi E. Bigazzi and Noel L. Warner
1978 480 pages $50.00 0-444-00297-0

Announcing Volume 2 Immunology of Bacterial Polysaccharides
Proceedings of a symposium presented at the Annual Meeting of the American Society for Microbiology, May 16, 1978, Las Vegas, Nevada
edited by Jon A. Rudbach, Abbott Laboratories, North Chicago, Illinois; Department of Microbiology, University of Montana; and Phillip J. Baker, Laboratory of Microbial Immunity, National Institute of Allergy and Infectious Diseases
1979 176 pages $24.00 0-444-00315-0

Scheduled for 1979
Volume 3 B Lymphocytes in the Immune Response
edited by Max Cooper, Ellen Vitetta, Donald Mosier and Irwin Scher
Volume 4 Immunologic Tolerance and Macrophage Function
edited by Peter Baram, Jack R. Battisto and Carl W. Pierce
Volume 5 Tumor Immunology
edited by William Terry

HUMAN IMMUNOLOGY
Launch issue January 1980
Editor-in-Chief: D. Bernard Amos, Department of Immunology and Microbiology, Duke University Medical Center, Durham, NC 27706
Managing Editor: Glenn Rodey, Barnes Hospital, Washington University School of Medicine, St. Louis, MO 63110
Devoted to an understanding of the ontogeny, mechanisms, regulation and control of immune responsiveness.
Subscription rates:
Volume 1, 1980 will be published in four issues. Individuals: $30.00; Institutions: $60.00
(Special rate available to members of the American Association for Clinical Histocompatibility Testing.)

IMMUNOLOGY LETTERS
Managing Editor: A. Bussard,
Assistant Managing Editor: G. Bordenave
Volume 1, 1979 (6 issues). Subscription rate: $75.75 including postage
First issue scheduled for July 1979

Cellulose ion exchangers should be spherical too

DEAE-Sephacel® is

The spherical form of DEAE-Sephacel gives you easy, uniform packing without the generation of fines. It improves your results because it reduces zone broadening and ensures uniform, high flow rates. DEAE-Sephacel is reproducible from batch-to-batch.

No precycling is needed because DEAE-Sephacel is ready swollen. Its controlled macroporous structure, which is almost completely independent of pH and ionic strength, gives high protein capacities and excellent recoveries.

DEAE-Sephacel is the only spherical cellulose ion exchanger.

New... IMMUNE REACTIONS IN LIVER DISEASE
Edited by A.L.W.F. Eddleston, J.C.P. Weber, and Roger Williams; with 21 contributors
Immunologists are sure to find of value the collaborative presentation of up-to-date, relevant information in this concise new text. Divided into seven parts, with several papers in each, the book cover: HBsAg Negative Chronic Active Hepatitis, HBsAg Positive Chronic Active Hepatitis, Genetic Predisposition for Chronic Active Hepatitis, Immune Damage to Other Organs and Cross-Reacting Antigens, Alcohol-Induced Liver Disease, Drug-Induced Liver Disease, and Immunotherapy. A helpful discussion rounds out each part.
316 pages/125 illustrations/1979/$30.00

MEDICAL IMMUNOLOGY
By Malcolm S. Thaler, M.D.; Richard D. Klausner, M.D., and Harvey Jay Cohen, M.D., F.A.C.P.
This innovative and eminently readable text offers many outstanding features. Integrated coverage of basic and clinical immunology presents each immune-related disease in the same context as its underlying immunologic principles. The emphasis is on human immunology. Medical Immunology is heavily illustrated with diagrams, photomicrographs, electronmicrographs, and immunofluorescent studies. Extensive referencing adds value to this volume.

Also available at your medical bookstore
In the time it takes you to read this ad you could have loaded 20 samples onto your electrofocusing gel

That's how easy it is with LKB's Multiphor® unit. And duration of the runs is also short: the precisely engineered all-glass cooling stage means that you can apply higher power for faster runs—higher field strengths for sharper resolution. With the Multiphor unit and LKB's power supply you can do up to 48 samples in less than two hours!

Besides being the system of choice for analytical and preparative electrofocusing, the Multiphor unit is excellent for electrophoresis as well. Simply add the required kit and you're ready to work with SDS-polyacrylamide gels, agarose gels — even immuno-electrophoretic methods.

For safety the Multiphor unit is also unique. There is no metal in the cooling stage to invite short circuits, the electrode design makes it almost impossible to come into contact with high voltage, and the power supply has a safety interlock so you can connect it to your own equipment without additional risk.

If you think that a system which offers so much in speed, reproducibility, versatility and safety has to be costly, think again. The Multiphor system is one of the least expensive flat bed instruments available. Send for details today. (And be sure to ask for pertinent LKB Application Notes, a free subscription to Acta Ampholinae and information about forthcoming electrofocusing seminars and workshops.)

Prepared by electrofocusing for electrofocusing

Ampholine® carrier ampholytes are prepared by electrofocusing a range of polyamino-polycarboxylic acids into nine narrow, specific pH fractions. Is there any better way to prepare materials used in a biochemical technique than by the very technique itself? We know of none.

Are you also aware that Ampholine carrier ampholytes have the sharpest and lowest MW range of any ampholytes on the market? And that only LKB's ampholytes have been shown to be easily separated from proteins with no artificial binding? For the highest resolution, for the highest reliability, you can put your trust in Ampholine ampholytes.

Contact LKB today for full information on Ampholine solutions. Ask, too, about IEF workshops, seminars and a free subscription to Acta Ampholinae, a bibliography of over 2000 papers on IEF using Ampholine carrier ampholytes.

New: agarose for electrofocusing!
Ficoll-Paque is a sterile solution of Ficoll 400 and diatrizoate sodium (density $1.077 \pm 0.001$ g/cc). Available in bottles with a rubber septum closure to facilitate sterile handling and in a convenient pack size ($6 \times 100$ ml). For further details see our booklet available on request.
IMMUNOGLOBULIN FRACTIONS

ANTISERA TO HUMAN PROTEINS PURIFIED BY AFFINITY CHROMATOGRAPHY.

TAGO pioneered the commercial use of affinity chromatography for antisera purification. We offer all of the commonly used antisera for immunoprecipitin techniques such as IEP and double diffusion.

- Lot-to-lot consistency assured by rigorous quality control
- Normal IgG, IgA and IgM serum proteins used for immunization — not paraproteins
- Antisera are made monospecific by affinity chromatography— therefore contain no human serum proteins
- Only the highest titered antisera are fractionated by ion exchange chromatography to obtain high antibody titer and low total protein

Among the antisera to human proteins, produced in goat:
- Anti Kappa & Anti Lambda (Free—Bence Jones)
- Anti Kappa & Anti Lambda (Free and Bound)
- Anti IgG • Anti IgA • Anti IgM • Anti IgE • Anti NHS
- Anti Polyvalent (reacts to all immunoglobulins including IgD, IgE, Kappa & Lambda)

For your in-house labeling, we strongly recommend TAGO specific antibodies purified by affinity chromatography. TAGO also offers FITC conjugated specific antibodies.

TAGO, with its long experience in affinity chromatography, is uniquely able to offer products that are unsurpassed on a price/quality basis. Try TAGO quality. You won't be disappointed.

For more information, including complete catalog, write or call TAGO.

Two New Additions to The Clinical Concepts In Medicine Monograph Series

**CLINICAL CONCEPTS OF INFECTIOUS DISEASES** Second Edition
Edited by Leighton E. Cluff, MD and Joseph E. Johnson, III, MD

The thirty-two contributing authors of Clinical Concepts of Infectious Diseases have brought their considerable experience and expertise to its writing under the editorship of Drs. Cluff and Johnson.... The result is a compendium of information no clinician should be without.

**Contents**

1978/545 pages/11 illustrations/$22.50

**CLINICAL CONCEPTS OF IMMUNOLOGY**
By Robert H. Waldman, MD

A concise yet comprehensive reference covering the basic science and the concepts of immunology as it relates to clinical practice. Written in a clear and readable style, Clinical Concepts of Immunology is a primary reference of the important clinical correlations of basic immunology and, as such, belongs in the library of every specialist who must deal with the complex diagnosis and treatment of patients with immunologic disorders.

**Contents**

1979/263 pages/32 illustrations/$19.50

Melloni’s Illustrated Medical Dictionary

Just published — the ideal medical reference for
• office
• lab
• clinic
• library

Color highlights  Outstanding illustrations

Clear, concise definitions  Numerous tables and charts

For the person whose job requires knowledge of health science terminology, Melloni’s is the reference to turn to. Medical words, definitions, concepts — all are explained clearly and quickly in a unique visual format. Readers get a concise and rapidly comprehended store of knowledge. Retention is improved, too, because with Melloni’s they’re not just reading a definition, they’re seeing it!

One reviewer said, “If a dictionary could ever get on a best seller list, Melloni’s should! Readable, interesting format, beautiful illustrations — highly recommended!”

Order today!

Practice Makes Perfect

We know you count on your medical dictionary. That's why we made Stedman's 23 as perfect as we knew how.

Drawing upon the combined assets of man and computer, Stedman's captures the total spectrum of terminology relevant to the life sciences. Each definition has been reviewed by as many as five medical specialists to ensure proper coverage for subjects in overlapping fields.

Late developments in medical research have provided more than half of the 28,000 new or revised entries. Many of these terms are so current that they were still being entered as the main vocabulary was prepared for press.

Make it your practice to use Stedman's. We've made perfecting it part of ours.

April 1976, 90,257 entries, 358 illustrations with 31 color plates, 1678 pages, $27.50

Williams & Wilkins
