Fluorescein and Rhodamine Conjugated Specific Antibodies
(FluorAbody® Reagents)

Anti-Human Anti-Animal Species

Fluorescein and Rhodamine conjugated specific antibodies have been prepared for certain classes or combinations of human plasma proteins and animal immune globulins.

FluorAbody® reagents are Specific Antibodies produced by Solid Phase Immunoabsorption techniques and labeled with fluorescein (FITC) or rhodamine (RITC) isothiocyanate. The fluorochrome to antibody (protein) ratios are expressed as microgram FITC or RITC per milligram antibody (protein) as well as mole FITC per mole antibody.

Unlike most commercial conjugation processes which label the entire gamma globulin fraction, the procedure used to prepare these products labels only the Specific Antibody fraction of the gamma globulin. The result is a much higher level of specificity. The absence of extraneous labeled protein so significantly reduces the background that the necessity for counter-staining is eliminated.

Uses:
- Direct Staining Systems
- Indirect Staining Systems

These reagents are for research use only and are not for use in humans, nor for diagnostic or therapeutic use.

Please write for our current Price List and Catalog.

INFORMATION FOR CONTRIBUTORS

Manuscripts should be sent to:
Dr. Joseph D. Feldman
Department of Immunopathology
Scripps Clinic and Research Foundation
La Jolla, California 92037

If and when the manuscript is published, it will become the sole property of The Journal and all copyright will be taken out in the name of The Williams & Wilkins Company, and all rights in copyright reserved to The Williams & Wilkins Company.

Contributions may be short or long; the length should be commensurate with the scientific content. The chief criteria for acceptance are quality, originality, and clarity.

INSTRUCTIONS FOR PREPARATION OF MANUSCRIPT

The original and two (2) copies of the manuscript, including references, legends, figures and illustrations must be submitted. The text and all other material, e.g., footnotes, references, and acknowledgments, must be typed in double space (at least 3/16-inch or 5-mm spacing from the bottom of one line to the top of a capital of a succeeding line) on one side of 8½ inch x 11 inch paper of good quality. The two (2) copies may be legible carbon or mimeographed copies or photocopies.

A short title to be used as a running head (not more than 50 characters) should be typed alone on the first page. Type the complete title on the second page, and the authors’ full names (first name, middle initial(s), surname) and affiliations on the third page. The format of The Journal must be followed by typing the text and the list of references. References will be numbered as they appear in the text and will be listed in the format:

Only papers that have been accepted for publication should be listed in the references (i.e., articles that are already paginated or in press). Manuscripts in preparation, unpublished observations, and personal communications should be referred to as such in text; completed manuscripts that have been submitted for publication may be cited as a footnote to the text. If such information is in press when the author receives his galley proofs he may make appropriate citations in the text at that time.

All material to be set in a type size different from that of the text, such as tables, case histories, quotations, formulas, legends for figures and illustrations, footnotes, and references must be typed on separate pages. If abbreviations are to be used in the paper, the abbreviations and their meanings should be typed double spaced, in one paragraph, on a separate sheet. Legends should not be attached to or written on figures or illustrations and must be typed double spaced. The position of tables and figures in the text may be indicated on the page margin.

List all components of culture medium used in experiments so that sufficient data to reproduce reported results are available. This information may be supplied in the Abbreviations footnote, in a table listing all components, by referring to a published article containing the information, or by identifying the commercial source which supplies the specific medium if components are listed by the supplier.

Illustrations and Photomicrographs. Photographs of figures and other illustrative material must be on glossy paper (in triplicate); they must be clearly marked on the reverse side with the number, author’s name, and orientation (top) and should be unmounted. Graphs should be in black ink on unlined or bluelined paper. If graphs exceed 9 x 12 inches in size, they must be accompanied by glossy photographic reproductions within that size.

For photomicrographs a better grade of paper may be used at additional cost, up to $100.00 for a single page. Estimates can be obtained when the manuscript is submitted for publication. Estimates for color photomicrographs are also available.

Communications. Short papers, at the author’s request, may be printed in the Communications section of The Journal. These papers should not exceed two (2) printed pages in length, including summary, references, tables and figures. The text of a full printed page contains about 1000 words. If accepted, their publication will be accelerated, usually within two (2) months of acceptance. Suitability for publication will be judged on the basis of timeliness, novelty, and importance by the usual refereeing procedure.

Letters to the Editor. Letters, which will be printed at the Editor’s discretion, are responses to articles that have been published in The Journal of Immunology and should relate to scientific matters.

Opinion. This is an invited brief summary and commentary of a controversial subject of broad interest to immunologists.

Workshops. The Journal of Immunology will publish abstracts of workshops that have been refereed by program committees of the workshops. These will be accepted if each abstract is prepared for photocopy, i.e., typed single spaced on a separate page. Charges will be the full cost of each printed page.

MANUSCRIPTS THAT DO NOT CONFORM TO THESE SPECIFICATIONS MAY NOT BE ACCEPTED, AT THE EDITOR’S DISCRETION.

Page Charges. Authors will be charged $30.00 for each printed page of an article or a Communication. All manuscripts, if accepted, will be published only after commitment by the author(s) or financial officer of their institution to pay a charge of $30.00 per published page. Under exceptional circumstances, page charges will be waived if deemed appropriate by an adjudicating member of the Editorial Board.

Reprints. Reprints must be ordered in advance. A form showing the cost of reprints, together with an order slip, is sent with the galley proof. No more than 1000 reprints of any article may be purchased. The invoice for reprints will include the charges for pages.
Pharmacia has it all... ion exchangers, gradient mixer, columns

Since no single ion exchanger is best for all applications, Pharmacia now enables you to choose between three matrices: Sepharose® (cross-linked agarose), Sephadex® (cross-linked dextran), and now Sephacel® (cross-linked cellulose). Although they have different properties, they are all beaded to pack easily without generating fines. Pharmacia also makes available the Gradient Mixer GM-1 for producing linear concentration gradients as well as reproducible pH gradients. Choose from a broad range of precisely engineered chromatographic columns for every application.

If it isn't a Napco® you may be reading the temperature in the water jacket...not the chamber.

The Napco 7000 series are the only water jacketed automatic CO₂ incubators that actually tell you the temperature of the chamber, where your important experiment is taking place.

All other water jacketed automatic CO₂ incubators read the temperature of the water, not the chamber environment. If your research is temperature sensitive, reading the exact temperature of the chamber is critical. For accuracy and reliability, insist on the Napco 7000 models. They are the most advanced incubators on the market. Available in single or space saving vertical models. There's much more. Write for brochure.

If you should ever have an equipment breakdown... a Heinicke/Napco Minute Man will be on his way to you in 48 hours.

You'll seldom need the Minute Man service, because Heinicke and Napco instruments are built to work. But if you do, dial toll-free 800-327-9783.

Napco® water jacketed automatic CO₂ incubator. U.S. patent # 3848569

Immune Mechanisms and Disease
Edited by D. BERNARD AMOS, ROBERT S. SCHWARTZ and BERNARD W. JANICKI
Proceedings of a conference on “The Interface Between Immune Mechanisms and Disease”, held at Brook Lodge, Augusta, Michigan, December 12-14, 1977
Most infections can be prevented by some form of immunization or treated with antibiotics. Others cannot and some diseases are becoming resistant to treatment. This book describes the functioning of the immune system and its attempts to deal with such diseases as syphilis and parasitic infections, the steps being taken to modify immunity to make it more effective and the relationship between HLA and disease.
1979, 398 pp., $22.00 ISBN: 0-12-055850-5

A NEW DIMENSION ADDED TO CELLULAR RESEARCH:

MONOCLONAL ANTI-THY 1.2

FOR IDENTIFICATION, LOCATION, AND ISOLATION OF MOUSE T-CELL LYMPHOCYTES.

New England Nuclear, the world's leading manufacturer of radioactive chemicals for research, presents a new tool for immunological studies of cellular systems. It is an extraordinarily specific antibody with greatly increased affinity for cell surface antigen, usable at titers of $1 \times 10^6$ in an efficient and rapid technique.

Anti-Thy 1.2 is available from New England Nuclear in two concentrations: as 1mg immunoglobulin (Cat. No. NEI-001) or 0.1mg immunoglobulin (Cat. No. NEI-001A), both supplied in 1ml of buffer solution. For prices and further information, please return the coupon or call toll free 800-225-1572.

Please send prices and complete information on Anti-Thy 1.2

Not for use in humans or clinical diagnosis.
Should your photometer
We're inclined to

Why are most photometers built to read horizontally?

We can't think of one good reason! But, we can think of a lot of good reasons why a vertical photometer—specifically our new Titertek® Multiskan Microplate Reader—outperforms any horizontal unit on the market.

<table>
<thead>
<tr>
<th>Vertical vs Horizontal</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
<tr>
<td>Dilution Error</td>
</tr>
<tr>
<td>Evaporation Error</td>
</tr>
<tr>
<td>Layering Error</td>
</tr>
<tr>
<td>Light Distortion</td>
</tr>
<tr>
<td>Speed</td>
</tr>
</tbody>
</table>

The Titertek Multiskan vertical photometer achieves its distinct advantage because the focused beam of light:
- passes through only one container wall
- traverses the entire sample
- requires minimal sample volume (as little as 100 microliters)
- reads 96 samples in less than a minute

The Multiskan Breakthrough

Multiskan incorporates current state-of-the-art microprocessor circuitry to provide you with an instrument that can read 96 samples precisely and quickly.

Multiskan is simplicity in itself. Pipette 1 to 96 samples (as little as 100 microliters) into a standard polystyrene, flat bottom microtitration plate. Load the plate into the carrier, push the activate button and step back. In less than 60 seconds, you will receive a hard copy print out of your results. It's that simple!

*We refer you to the findings of Drs. Eisenwiener and Keller, CLIN. CHEM. 25/1, 117-121 (1979).
Multiskan makes light work of EIA (Enzyme-Linked Immunoassay) and other applications

Multiskan is designed to operate in either of two measurement modes. The quantitative Absorbance Mode, is perfectly suited to reading enzyme-linked immunoassays (EIA) and various tests in clinical chemistry. The qualitative Matrix Mode, effectively flags positives for EIA and MIC studies, cytotoxicity assays and other applications currently under study.

If you are inclined to believe we have developed a better method of photometry, contact Flow Laboratories. If you are still wavering, let us send you our complete literature package on the new Titrtek Multiskan Microplate Reader. We think you will also be inclined to agree with us.

One of the reasons why you get best value in guinea pigs from Camm

CAMM guinea pigs are bred and developed under carefully controlled environmental conditions. Holding rooms are equipped with HEPA filters to deliver clean air to the animals.

Strict sanitary animal husbandry safeguards are employed and animals are monitored microbiologically and histologically.

That's why CAMM guinea pigs will arrive in a healthy, alert condition ready for your biomedical research, tests and experiments in Bacteriology, Endocrinology, Immunology, Nutrition, Virology and Pharmacology.

You can choose from seven different strains of CAMM-Hartley-derived or English short hairs. Shipment can be within 24-48 hours.

Write CAMM at 414 Black Oak Ridge Road, Wayne, New Jersey, 07470 or phone (201) 694-0703 for details and prices.

As an introduction or review, this new work stands alone...

TEXTBOOK OF IMMUNOLOGY

By Baruj Benacerraf, MD and Emil R. Unanue, MD, both of Harvard University School of Medicine

Whether you’re a student, teacher, resident, immunologist, or specialist in some other field, if you need an excellent introduction or review of immunology, this new book is your best choice.

Written by two of this country’s leading immunologists, Textbook of Immunology was developed from lectures given at the Harvard School of Medicine and is designed to follow the standard lecture course in immunology for all health-science curriculums.

This concise, yet surprisingly comprehensive text covers all aspects of immunology including basic phenomena, structure and function of antibodies, description of lymphoid cells, and analysis of immunopathology. All the material is complete and up-to-date to provide the reader with a basic yet in-depth understanding of immunology... Textbook of Immunology stands alone as a guide to this rapidly expanding and complex discipline.

Order your copy today on 20-day FREE trial by sending the order form below or calling the Williams & Wilkins toll-free number!

Contents:

- Immunology: principles and phenomenology.
- The cellular basis of immunology.
- Cellular immunity and delayed hypersensitivity. Transplantation biology. Regulation of immunity by T lymphocytes.
- Immunological tolerance. Immunogenetics.
- Tumor immunology. The classical and alternative complement sequence.

1979/292 pages/51 illustrations/$10.95

Please send me _ copy(ies) of Textbook of Immunology (0527-8) at $10.95 each on 20-day FREE trial (if not fully satisfied, return the book within 20 days and pay nothing).

PRINCIPLE: Avidin, a 68,000 molecular weight glycoprotein found in eggs, has an extraordinary affinity* for the small molecular weight vitamin, Biotin. Coupling Biotin to any protein gives that protein the ability to bind Avidin. Avidin conjugated with Ferritin, Fluorescein, Rhodamine or Horseradish Peroxidase can be used to localize Biotinyl-Antibody or Biotinyl-Lectins after they have bound to their receptors.

*Over one million times higher than most antigen-antibody interactions.

THE BIOTIN/ avidIN SYSTEM has several advantages over direct coupling of the marker to antibody.

- Improved Sensitivity
- Reduced non-specific binding
- Elimination of steric hindrance problems
- Instantaneous complex formation
- High complex stability
- Simultaneous use of several markers
- Biological processes unaffected
- Wide applicability

[ReAGENTS INCLUDE: Biotinyl-Anti-immunoglobulin antibody
Biotinyl-Lectins
Fluorescein-Avidin
Rhodamine-Avidin
Horseradish Peroxidase-Avidin
Ferritin-Avidin
Agarose-Bound Avidin]

These [ReAGENTS are available individually or in kit form.

Be an aggressive buyer

COSTAR DISPOSABLE LABWARE: Good ideas and high quality combined. Precision molded and radiation sterilized. New STRIPETTE® pipettes in three sizes. Flasks, dishes, and cluster plates are highly polished and distortion-free, with frosted labeling surfaces where useful. All are subjected to our tough Q.C. screening.

Cluster Plates: Every well numbered so you work quickly and accurately. And rimmed so media stays where it belongs. Plus non-reversible covers with built-in condensation rings to prevent cross-contamination.

Triangular Flasks: Sloping shoulders and extra-wide necks let you reach every square centimeter—even the upper corners. Frosted labeling surfaces.

Leighton Tube: The first disposable plastic one for your basic tissue culture needs and E.M. Non-slip handle for the cover slip. Slide is scribed across the middle with each half numbered. Treated cover slip, unhelps prevent unwanted cell attachment.
We'll be ready.

**Dishes:** Three sizes plus a 2mm grid version and our 108-well Cuprak dish.

**STRIPETTE Pipettes:**
The unique color stripe, magnified by the reagent, lets you see the level easier and measure more accurately. Different colors for different sizes—1ml, 5ml, 10ml. Plugged.

**Free Samples:** See for yourself that we really mean quality. Call or write for what you haven't tried already (especially some STRIPETTES). Then let's get down to the name of your nearest dealer and that aggressive buying we mentioned earlier.

Melloni's Illustrated Medical Dictionary

Just published — the ideal medical reference for
• office
• lab
• clinic
• library

For the person whose job requires knowledge of health science terminology, Melloni's is the reference to turn to. Medical words, definitions, concepts — all are explained clearly and quickly in a unique visual format. Readers get a concise and rapidly comprehended store of knowledge. Retention is improved, too, because with Melloni's they're not just reading a definition, they're seeing it!

One reviewer said, "If a dictionary could ever get on a best seller list, Melloni's should! Readable, interesting format, beautiful illustrations — highly recommended!"

Third American Edition
BURCKHARDT'S ATLAS
AND
MANUAL OF
DERMATOLOGY
AND VENEREOLOGY

Edited by Peter J. Lynch, MD, Professor and Chief, Division of Dermatology, University of Arizona College of Medicine; and Stephan Epstein, MD, Clinical Professor of Dermatology, University of Wisconsin School of Medicine

Very simply, Burckhardt's Atlas is the best illustrated overview of disorders commonly seen by the dermatologist. This volume so comprehensively meets the need for a visual presentation of cutaneous disorders that it has stood as the leading dermatologic reference of its kind since 1959. Now available in a new third edition, Burckhardt's continues to be unequaled in the quality of its 111 color plates and the detail of its text.

Burckhardt's Atlas and Manual of Dermatology and Venereology is the one reference volume that is both current and concise—the qualities most needed in a book that will be taken from the shelf often.

1977 / 271 pages / illustrated, including 111 color plates / $19.50

Please send me:
