CELLULAR IMMUNOLOGY AND IMMUNE REGULATION

1599  IL-4 Expression by Grafts from Transgenic Mice Fails to Prevent Allograft Rejection  
    Regula Mueller, Joanna D. Davies, Troy Krahl, and Nora Sarvetnick

1604  IL-12 Production by Central Nervous System Microglia Is Inhibited by Astrocytes  
    Francesca Aloisi, Giuseppe Penna, Joanna Cerése, Begoña Menéndez Iglesias, and Luciano Adorini

1613  Cot Kinase Regulation of IL-2 Production in Jurkat T Cells  
    Alicia Ballester, Rafael Tobeña, Carlos Libsona, Victor Calvo, and Susana Alemany

On the cover: Graphical representations of MHC class I molecules H-2D^b and HLA-A2.1. Identical residues are shown in green. A murine CTL clone (AHIII2.2) displays peptide-specific recognition of both of these molecules, and cytolytic assays suggest that these are functionally equivalent epitopes. This TCR appears to make a different, but overlapping set, of contacts with each class I peptide complex. In this instance, cross-recognition appears to be the result of both shared and complex-specific contacts. (Figure 8 from Loftus, D. J., Y. Chen, D. G. Covell, V. H. Engelward, and E. Appella. 1997. Differential contact of disparate class I peptide complexes as the basis for epitope cross-recognition by a single T cell receptor. J. Immunol. 158:3651.)
