On the cover: Fms-like tyrosine kinase 3 ligand (Flt3L) (green) is expressed predominantly within adenovirally transduced astrocytes that express GFAP (magenta) (colocalization of Flt3L and GFAP is seen as white in the confocal image). Flt3L expression in the brain induces the selective recruitment of plasmacytoid dendritic cells expressing IFN-α to the brain parenchyma. Curtin J. F., G. D. King, C. Barcia, C. Liu, F. X. Hubert, C. Guillonneau, R. Josien, I. Anegon, P. R. Lowenstein, and M. G. Castro. 2006. Fms-like tyrosine kinase 3 ligand recruits plasmacytoid dendritic cells to the brain. J. Immunol. 176: 3566–3577.
