On the cover: Panel demonstrates TUNEL analysis of TGF-β-1-induced apoptosis among cells acutely dissociated from normal lymph nodes. The cells were incubated with 40 ng/ml TGF-β-1 for 2 days. Dendritic cells (S100 cells) are stained red (fuchsin), while TUNEL-positive cells are stained brown (3,3'-diaminobenzidine tetrahydrochloride). The cells are apoptotic dendritic cells. Ito, M., Y. Minamiya, H. Kawai, S. Saito, H. Saito, T. Nakagawa, K. Imai, M. Hirokawa, and J.-i. Ogawa. 2006. Tumor-derived TGF-β-1 induces dendritic cell apoptosis in the sentinel lymph node. *J.
