In Results, in sentence 16 under the heading A Cullin-based ubiquitin ligase pathway is involved in host cell-mediated IRF-3 degradation following SeV infection, reference to CREB coactivator is incorrect. In sentence ten, under the heading Degradation of IRF-3 is dependent of the TBK1/IKKi-signaling pathway; reference to RNA interference silencing technology is incorrect. The corrected sentences are shown below.

Interestingly, this increase in the stability of the hyperphosphorylated forms of IRF-3 was also associated with a sustained activation of IRF-3 as verified by the presence of dimers or its association to CREB binding protein (CBP) coactivator after infection with SeV (Fig. 3E).

We next directly examined the contribution of the IKK-related kinases in IRF-3 degradation by first using RNA interference (RNAi) technology.

The second author’s last name is misspelled. The correct name is Jobin Eslahpazir.
