On the cover: In pneumococcal pneumonia, pulmonary RAGE expression is up-regulated compared with normal situations as reflected by more intense staining (brown). Like in normal situations, the staining has an endothelial pattern: bronchial epithelial cells are negative. Moreover, neutrophils recruited to an area of confluent pneumonia (aqua/green) hardly express RAGE. van Zoelen, M. A. D., M. Schouten, A. F. de Vos, S. Florquin, J. C. M. Meijers, P. P. Nawroth, A.
