On the cover: CXCL13 blockade scrambles tertiary lymphoid organization in pancreatic islets but does not block B lymphocyte invasion. Immunofluorescent staining showing B220<sup>+</sup> B cells (pseudocolored pink) and CD3<sup>+</sup> T cells (pseudocolored blue) of a typical inflamed islet from a 12-wk-old female NOD mouse treated with CXCL13-blocking Ab from age 3 wk. Henry, R. A., and P. L. Kendall. 2010. CXCL13 blockade disrupts B lymphocyte organization in tertiary lymphoid structures without altering B cell receptor bias or preventing diabetes in nonobese diabetic mice. J. Immunol. 185: 1460–1465.
