On the cover: IL-33, an alarm signal from the IL-1 family, is highly expressed in the CNS. Expression of β-galactosidase driven by the endogenous IL-33 promoter was detected in the granular layer and white matter of the cerebellum (blue) using a novel Il-33–LacZ gene trap reporter strain. Pichery, M., E. Mirey, P. Mercier, E. Lefrançois, N. Ortega, and J.-P. Girard. 2012.
