On the cover: Sirius red staining of the renal cortex of a CX3CR1-deficient mouse 7 d after unilateral ureter ligation,
a model of kidney fibrosis. This staining illustrates the expanded extracellular matrix, in particular collagens, indicative
of aggravated interstitial fibrosis in the absence of CX3CR1. Engel, D. R., T. A. Krause, S. L. Snelgrove, S. Thiebes,
M. J. Hickey, P. Boor, A. R. Kitching, and C. Kurs. 2015. CX3CR1 reduces kidney fibrosis by inhibiting local proliferation
