Insulin-like growth factor-1, or IGF-1, shares structural homology with insulin and IGF-2 and plays a critical role in growth differentiation and development. IGF-1 binds to the type 1 IGF receptor and also binds to each of the six IGF binding proteins (IGFBPs). This binding regulates the biological function of IGF-1. Cell Sciences carries a full range of IGF proteins, IGF analogs and antibodies.

Cell Sciences offers quality reagents for life science research and development:

- Native & Recombinant Proteins
- Monoclonal & Polyclonal Antibodies
- ELISA and ELISPOT kits
- Matched Antibody Pairs
- Cell and Tissue Lysates
- Small Molecules

Our products are low endotoxin, highly pure, biologically active and suitable for cell culture and animal studies. Bulk quantities and custom vialing available.
