On the cover: ICOS ligand blockade by mAb MIL-5733 recovers germinal center (GL7, green) development in the draining lymph nodes of selective B cell–ADAM10 knockout (ADAM10<sup>B-/-</sup>) mice. Due to the atypical architecture of ADAM10<sup>B-/-</sup> lymph nodes, germinal centers develop in abnormal follicular locations (B220, blue). T cells are labeled with anti-CD90 (red). Lownik, J. C., A. J. Luker, S. R. Damle, L. F. Cooley, R. El Sayed, A. Hutloff, C. Pitzalis, R. K. Martin, M. E. M. El Shikh, and D. H. Conrad. 2017. ADAM10-mediated ICOS ligand shedding on B cells is necessary for proper T cell ICOS regulation and T follicular helper responses. *J. Immunol.* 199: 2305–2315.
