On the cover: Deletion of *nfkb2* in Foxp3<sup>+</sup> regulatory T cells (Tregs) results in impaired Treg homeostasis, altered suppressive function, and systemic inflammation. However, concomitant ablation of *relb* in *nfkb2*-deleted Treg cells restores suppressive function and, as revealed here by histopathological analysis of colon sections, rescues the intestinal inflammation. Grinberg-Bleyer, Y., R. Caron, J. J. Seeley, N. S. De Silva, C. W. Schindler, M. S. Hayden, U. Klein, and S. Ghosh. 2018. The alternative NF- $\kappa$ B pathway in regulatory T cell homeostasis and suppressive function. *J. Immunol.* 200: 2362–2371.
