The Common Cold

FOR good reasons, this subject has come under particularly close scrutiny. There is a steady increase of an already wide interest in it.

Volume VIII of the *Annals of the Pickett-Thomson Research Laboratories* is devoted to the Common Cold. Not heretofore has any comparable attempt been made to cover the entire ground.

The work must be regarded as an encyclopedia of information on the subject. Here is digested the information from 2000 research papers, in process of collection for twenty years. To this is added the authors' own extensive researches, covering fifteen years.

It is a critical review, interpretative and commentative. It is most competently done, the authors being David Thomson and Robert Thomson of the Pickett-Thomson Research Laboratory, London.

"Monumental" is a fair characterization. The work is published on an 8½ x 11 format, with xxiv + 738 text pages, making a volume 2½ inches thick.

There is included an atlas of fifty-one full-page half-tone plates, comprising about an even hundred microphotographs. The plates with accompanying text, are in addition to the pagination given above.

An analytical table of contents takes 12 pages. There is a bibliography occupying forty pages, an author index of 10 pages, and a subject index of 28 pages.

Overleaf is presented a condensed outline of the contents. The work is paper bound, and the price is $15.00.

The Common Cold

By DAVID AND ROBERT THOMSON

(Vol. VIII of the Annals of the Pickett-Thomson Research Laboratory)

CONDENSED OUTLINE OF CONTENTS

INTRODUCTORY

I Importance of Research on the Common Cold.

II Prevalence of the Common Cold.

ANATOMY, PHYSIOLOGY AND FLORA

III Structure and Physiology of the Nose.

IV Anatomy and Physiology of the Nasal Sinuses.

V, VI, & VII Bacteriology of the Healthy Nose; Naso-Pharynx; Throat and Tonsils.

VIII Physiology and Chemistry of the Mouth and Saliva.

IX Bacteriology of the Normal Healthy Mouth.

X & XI Physiology and Bacterial Flora of Trachea, Bronchi and Lung Alveoli.

THE COMMON COLD

XII Definition.

XIII A Single Disease, or a Group?

XIV Relation to Influenza.

XV Non-Organismal or Non-Contagious Colds, Due to Irritation, Trauma, Severe Cold, Toxic and Nervous Factors, Allergy.

RÔLE OF VARIOUS ORGANISMS IN COLDs, BRONCHITIS, TON-SILLITIS, ETC.

XVII Pneumococci.

XVIII “Micrococcus Catarhalis.”

XIX Streptococci.

XX Pfeiffer’s Bacillus.

XXI “B. Coryzae Segmentosus” (B. Septus).

XXII “Micrococcus Paratetragenus.”

XXIII Staphylococci.

XXIV Friedlander’s Bacillus.

XXV Filter Passing Anaerobic Bacteria.

XXVI Miscellaneous Bacteria.

ASSOCIATED PROBLEMS

XXVII The Filter-Passing Virus Theory.

XXVIII Colds and Respiratory Diseases in Animals.

XXIX Blood Changes During the Common Cold.

XXX Part Played by Chill in Causation.

PREDISPOsING FACTORS

XXXI Bad Ventilation, etc.

XXXII Fatigue.

XXXIII Diet and Vitamin Deficiency.

XXXIV Clothing.

XXXV Other Factors.

COMPLICATIONS

XXXVI Complications and Sequelae.

XXXVII Nasal Sinusitis Following Colds and Influenza.

TREATMENT

XXXVIII Vaccines.

XXXIX Chlorine Gas.

XL Drugs.

XLI Local Remedies.

XLII & XLIII Treatment and Pathology of Persistent Chronic Nasal Catarrh.

XLIV Nasopharyngeal Toxemia.

EPIDEMIOLOGY AND PREVENTION

XLV Epidemiology.

XLVI Prevention.

CONCLUSORY

XLVII Addendum: Various Considerations.

XLVIII Authors’ Summary and Conclusions.

XLI References to Literature.

Illustrative Plates. Author Index. Subject Index.

$15.00
