Difco reagents for the diagnosis of 
Group A Streptococcal Infections 
• RHEUMATIC FEVER 
• GLOMERULONEPHRITIS

Antistreptolysin O titers (ASTO) and their relation to pathological conditions in Group A streptococcal infections have established the importance of this determination as a routine clinical test.

Bacto-Streptolysin O Reagent- a dehydrated, standardized and stable reagent requiring only rehydration with distilled water. Antistreptolysin O titers have been impractical for routine diagnosis because of the difficulties in preparing the reagent. Bacto-Streptolysin O Reagent is a standardized preparation permitting the routine performance of this diagnostic test in all clinical laboratories.

Bacto-ASTO Standard- an antiserum titred in Todd units for use as a control in the determination of antistreptolysin O titers.
