THE JOURNAL OF IMMUNOLOGY

Official Journal of The American Association of Immunologists

CONTENTS

The Specificity of the Nonspecific. William C. Boyd.................................................. 221
Studies on Immunologic Depression in Chickens. A. A. Hirata and A. M. Schechter-Mann.......................................................... 230
The Effect of Added Calcium on Treponemal Immobilization. Frank W. Chorpenning and Donald B. Beers.......................... 240
Serologic Studies of Purified Staphylococcal Coagulase with Special Reference to Fluorescence Microscopy. Hans Blobel and David T. Berman................ 244
Tissue Culture Studies on Bacterial Allergy in Experimental Brucellosis. II. The Cytotoxicity of Nucleoprotein Fractions of Brucellae. Dorothy H. Heilman, Elmer Rice, Dexter H. Howard, Henry E. Weimer and Charles M. Carpenter...... 258
The Antibody Response to Smallpox Vaccination as Measured by a Tissue Culture Plaque Method. Ernest Cutchins, Joel Warren and William P. Jones........ 275
Determination of Relative Concentrations of Soluble Antigens in Sea Urchin Eggs by Means of Graded Antiserum Absorptions Combined with Agar Diffusion Techniques. Peter Perlmann, Jane Couffer-Kaltenbach and Hedvig Perlmann. 284
Studies on Measles Virus. II. Physical Properties and Inactivation Studies of Measles Virus. Samuel J. Mussen and Gerald E. Underwood.. 292
A β-Globulin Antibody in the Sera of Guinea Pigs and Cattle Infected with Foot-and-Mouth Disease. F. Brown......................................................... 298
The Production of Antibody by Transferred Bone Marrow. Irwin L. Stoloff........ 304
Purification of the Virus of Foot-and-Mouth Disease by Fluorocarbon Treatment and Its Dissociation from Neutralizing Antibody. F. Brown and B. Cartwright........ 309
Purification of Q Fever Rickettsiae by Density-Gradient Sedimentation. Edgar Ribi and Bill H. Hoyer............................................................... 314
Nephrotic Syndrome in Rats Produced by Sensitization to Rat Kidney Proteins: Immunologic Studies. Janet L. P. Hunter, Donald B. Hackel and Walter Heymann................................. 319

Information for Contributors

Manuscripts should be carefully revised and the original should be sent to

Dr. John Y. Sugg
Journal of Immunology
Cornell Medical College
1300 York Ave.
New York 21, N. Y.

Authors will be charged for space in excess of 10 printed pages and also for all illustrations and tabular or graphic matter in excess of 10 per cent of the pages in each article.

Reprints must be ordered in advance. A table showing cost of reprints, with an order slip, is sent with proof. Orders for purchased reprints must be limited to 1,000 copies. The invoice for reprints will also include charges for illustrations, excess pages and tabular matter, if any.

Instructions for the Preparation of Manuscript

Copy should be typed double-spaced on one side only of 8½ x 11 paper. Even material that is to be set in a type size smaller than that of the main text (footnotes, references, etc.) should be double-spaced.

The author should supply a short title for use as a running head. This should be typed on a separate sheet as the first page of manuscript. Type the complete title of the article on a second sheet, and the authors’ names and affiliations on a third sheet. All material that is to be set in a type size different from that of the main text should be typed on separate sheets. This includes tabular matter, case histories, quotations, formulas and other subsidiary matter in the text, footnotes, bibliographies, and legends for illustrations. Displayed formulas which are to be built up to more than one line of type, even if they are the same size type as the text, should be on a separate page. Legends should not be attached to or written on the illustration copy. Positions for tables and figures in the text may be indicated in the margin of the text page.

Manuscripts that do not conform to these instructions will be cut and rearranged so that the matter to be set in different sizes of type can be separated.

Galley proof. Authors will receive galley proofs of their papers set separately as outlined above. Galleys will be arranged in the following order: tables, running heads, footnotes, figure legends, text, bibliography. All material that has been cut from the body of the text will be inserted in its proper place in the galleys. This includes formulas, quotations, case histories, and other subsidiary matter. Manuscript will be arranged in this order: formulas, tables, footnotes, figure legends, text inserts including bibliography, text.

Illustrations. Copy for illustrations should be unmounted glossy photographs clearly identified as to number, author’s name, and top of figure in soft crayon on the back. Graphs should be in India ink on bluelined paper. If larger than 9 x 12", they must be accompanied by glossy photographs within this size.

For USA: Albert J. Phiebig, P.O. Box 352, White Plains, N.Y.
A number of diseases resulting from bacterial or viral infection can now be prevented by means of vaccines and toxoids, and the problem of administering these to the best advantage, and with the least inconvenience to the recipients, has become complex and difficult. The time has come to assess all the evidence which has accumulated, and to attempt to reach agreement on certain basic principles which must be observed in all inoculation schedules. The Symposium was organized with this object in view.

"Taking part in the Symposium were representatives of all sections of the profession interested in the subject—medical officers of health, school medical officers, general practitioners, pediatricians, epidemiologists, statisticians, representatives from infectious diseases hospitals, from the laboratories, from interested departments overseas...."

"The first session was devoted to consideration of the complications and side-effects which occasionally result from one or other of the immunization processes, such as provocation poliomyelitis, encephalopathy occurring after the administration of pertussis vaccine, and generalized vaccinia and encephalitis resulting from smallpox vaccination...."

"In subsequent sessions, dealing with the different procedures which are now recommended and commonly practiced, opening and supporting papers were presented by those having special and in many cases unique experience.

"In the end... it was unanimously agreed to recommend the modified schedules (of immunization), a recommendation which, in view of the status of those who took part in the Symposium, must be regarded as giving authoritative guidance to those concerned.

"A final recommendation, well worthy of implementation, was that a representative body be set up to keep the problems of immunization under review and to make from time to time such recommendations as might be rendered necessary by advancing knowledge."—From the Foreword by Brigadier Sir John Boyd, O.B.E., F.R.S.
