Under way at Miles Laboratories new Research Center in Elkhart, Indiana are expanding programs in the field of immunological research. These programs require the immediate addition of a Staff Research Immunologist of outstanding professional competence to our professional staff.

The individual selected to fill this important position will be responsible for staffing and leading a group of immunologists in investigations leading toward applications in the diagnosis and treatment of diseases. Qualified applicants should hold a Ph.D. and/or M.D. degree plus a record of accomplishment in immunological research.

Confidential personal discussions can be arranged at your convenience by directing your communications to:

How stress conditions may influence... even alter nutritional requirements

Because of the relationships of one nutrient to another, the investigator must be constantly alert for stress conditions which arise during or are created by experiments.

For stress conditions can change the requirements for certain nutrients... shading, overshadowing or even distorting the effects of the variable or factor to be studied. Thus, a "chain of events" which adversely influence findings may result.

For example, one effect of an excess amount of fat added to an otherwise balanced diet is to reduce feed intake. This in turn may reduce the intake of one or more critical nutrients. In such a case, it would be difficult to attach the proper significance of poor performance per se to the fat without first correcting the deficiency.

What other stresses should we consider that may be related directly or indirectly to nutrition? The list seems almost endless. But generally, these stresses can be traced, broken down and classified into four major categories: genetic variation; environmental; disease; and post-operative conditions.

Often however, the source or cause of a specific stress is more difficult to identify. All factors which could contribute to it, should be considered. To illustrate, an individual's hormonal system undoubtedly reflects genetic and environmental influences. These in turn may contribute to variations in dietary requirements. The problem can be further complicated by the fact that there are numerous ways that changes in the hormonal system may alter dietary requirements. Each possibility should be considered and explored.

Many stresses must be controlled by the investigator. A big responsibility indeed. But his job is made much easier with the use of Rockland Diets. For Rockland Diets are formulated to provide a standard source of available nutrients and a balanced intake of these nutrients. Thus, the investigator who uses these diets will find it easier to recognize and control the other factors that may affect the experimental work.

For further information on Rockland standard reference stock diets, see your Rockland Dealer or write: A. E. Staley Mfg. Co., Decatur, Illinois—manufacturers and distributors of:

Rockland Rat Diet (complete) • Rockland Mouse Diet
Rockland Dog Diet • Rockland Mouse Wormer-Diet
Rockland Rabbit Ration • Rockland Rat Diet (D-Free)
Rockland Guinea Pig Diet • Rockland Monkey Diet

Of special interest is unique Newborn Agamma Calf Serum, which provides an excellent protein source for cell propagation and is recommended for detection, propagation and study of many viruses. This specially processed serum, from which gamma-globulin has been completely removed by fractionation technics, provides an unusually high content of alpha- and beta-globulins. In virus studies, it has shown no inhibition of Types I, II and III polio viruses. This serum is available in both liquid and dried form in a variety of practical sizes.

Other bovine specialties include: Newborn Calf Serum (liquid or dried), which is derived from 1- to 4-day-old calves and, because of high alpha-globulin content, is more stimulatory to cell growth than serum from more mature animals; non-toxic Fetal Calf Serum (liquid); Bovine Amniotic Fluid (liquid or dried); Bovine Embryo Extract (dried); Bovine Embryo Extract, Ultrafiltrate (liquid); Bovine Serum (liquid or dried); Bovine Serum, Ultrafiltrate (liquid).

Chicken Serum (liquid or dried) is available in large pools for polio testing. Our line also embraces other serums and serous fluids, ultrafiltrates, balanced salt solutions and synthetic media. We welcome your inquiries about special formulations or preparations of particular interest to you.

HYLAND LABORATORIES

4501 Colorado Blvd., Los Angeles 39, Calif.
N.B. Co. DELIVERS BIOCHEMICALS, NOT EXCUSES!

We confess. We had to rent the Rolls. Because most of our customers don't care about stylish delivery. (Though if they want it, they get it.) Speed is a more important specialty. 24-hour delivery in the U.S.A., slightly longer anywhere else. Care is another. Like you, we're perfectionists. The order that reaches your lab is your order... checked carefully, shipped accurately. N.B.Co.'s world-wide volume means you buy pure biochemicals at the lowest prices possible. N.B.Co.'s 2600 varieties mean we usually have what you want. For plain or fancy delivery in a hurry, call MOnrose 2-0214, Cleveland, Ohio. And send for our FREE 2600-item catalogue today.
