THE JOURNAL
OF
IMMUNOLOGY

VOLUME 89

BALTIMORE, MD.
1962
CONTENTS

NUMBER 1, JULY 1962

Fate of H3-Thymidine-Labeled Spleen Cells in in Vitro Cultures during Secondary Antibody Responses. Elmo E. Capalbo, T. Makinodan and W. D. Gude ......................................................... 1

Sensitization and Desensitization of Mice to Histamine and Serotonin by Neurohumors. Charles W. Fishel, Andor Szentivanyi and David W. Talmage .......................................................... 8

Evaluation of the Complement Method of Fluorescent Antibody Technique with Myxoviruses. Yorio Hinuma, Rei Ohta, Tsumoto Miyamoto and Nakao Ishida .................................................. 19

Studies on the Bacteriophage Neutralizing Activity of Serums. II. Comparison of Normal and Immune Phage Neutralizing Antibodies. Louis H. Muechel and Andre J. Toussaint ........................................... 35

Effect of Cations on Thermal Inactivation of Vaccinia, Herpes Simplex, and Adenoviruses. Craig Wallis, Czau-Siuang Yang and Joseph L. Melnick ................................................................. 41

A Study of Passive Sensitization of Guinea Pigs with Antigen-Antibody Complexes. Leon T. Rosenberg and Dora K. Tachibana .................................................................................. 47

Specificity of Encephalitogen-Induced Inhibition of Experimental "Allergic" Encephalomyelitis in the Guinea Pig. Cheng-Mei Shaw, Ellsworth C. Alvord, Jr., Willson J. Fahlberg and Marian W. Kies ................................................................................ 54

Studies on the Immunologic Unresponsiveness during the Secondary Disease Period of Lethally Irradiated Mice Protected by Homologous Bone Marrow. John S. Thompson, Eric L. Simmons and Diana Hofstra ......................................................................................................... 62

Studies of Induction of Allergic Encephalomyelitis in Rats and Guinea Pigs without the Use of Mycobacteria. Philip Y. Paterson and Jennifer Bell ................................................................. 72

Observations on Incidence and Mechanism of Egg Insusceptibility to Trachoma Viruses. E. Jawetz, S. Chino and L. Hanna ........................................................................................................ 80

Gel Double Diffusion Studies with Group B and Group A, Type 9 Coxsackie Viruses. II. Serologic Diagnosis of Coxsackie Virus Infections by the Gel Double Diffusion Technique. Nathalie J. Schmidt and Edwin H. Lennette .................................................................................. 96

A Simplified Immunofluorescent Plaque Method. Rex S. Spendlove and Edwin H. Lennette ................................................................................................................................. 106

Heterogeneity of the Major Fractions of Papain Digests of Rabbit Antibody. Peter Stelos, Oliver Roholt and David Pressman ........................................................................................................ 113

Immunochromic Studies on Bacteriophage Deoxyribonucleic Acid. III. Specificity of the Antibodies. William T. Murakami, Helen Van Vunakis, Harris Lehrer and Lawrence Levine ........................................................................................................ 116

The Staining Properties of Human Serum Proteins Conjugated with Purified Fluorescein Isothiocyanate. Lawrence H. Frommham and Rex S. Spendlove .................................................................... 124

Retention of Antigen in Neonatal and Older Chicks. Arthur A. Hirata, Justine S. Garvey and Dan H. Campbell .................................................................................................................. 132

Evidence for the Absence of Anaphylactogenic Host Protein in Highly Purified PR8 Influenza Virus. Arthur V. Kroeger ........................................................................................................ 136

Inhibition with Simple Sugars of Hemagglutination of Red Cells Modified with Salmonella Antigens. Marian Truszcynski and Edgar E. Baker ........................................................................... 154

NUMBER 2, AUGUST 1962

The Radiosensitive Nature of Homograft-Rejecting and Agglutinin-Forming Capacities of Isolated Spleen Cells. Franco Celada and Rachel R. Carter ......................................................... 161

Studies with Tissue Culture-Modified Rinderpest Virus as an Immunizing Agent. Carl J. De Boer ................................................................. 170

Conditions for the Production of an Interferon Appearing in Chick Cell Cultures Infected with Sindbis Virus. Monto Ho and Mary Kay Breining ........................................................................... 177

The Inhibitory Effect of Hydrocortisone on Lysis of Homologous Cells by Lymphocytes in Vitro. Werner Rosenau and Henry D. Moon ........................................ 422

Immunochromic Study of Antigenic Specificity in Delayed Hypersensitivity. Sidney Leskovitz. ........ 434

Two Different Anti-Insulin Antibodies in Guinea Pig Antisera. Yasuo Yagi, Patricia Maier and David Pressman ............................................................ 442

NUMBER 4, OCTOBER 1962

Homograft Reaction in Mouse Radiation Chimeras. I. Indirect Evidence for Graft-Anti-Host Activity. Gino Doria .............................................................. 453

Homograft Reaction in Mouse Radiation Chimeras. II. Direct Evidence for Graft-Anti-Host Activity. Gino Doria ......................................................... 459

Quantitative Studies of the Combination of Lima Bean Lectin with Human Erythrocytes. William C. Boyd, Harkishin M. Bhatia, Michael A. Diamond and Shoji Matsubara .................. 463

In Vitro Uptake of Antigen-Antibody Complexes by Phagocytic Cells. Roy Patterson, Irena M. Suszko and Jacob J. Pruzansky ........................................ 471

The Mechanism of the Hemagglutination Reaction. L. Gyenes and A. H. Sehon .......... 483

On the Nature of the Precipitate in the Generalized Shwartzman Reaction. A. Berken and M. Wolman ................................................................. 490

Delayed Cutaneous Reactions in the Rat. Martin H. Flax and Byron H. Waksman .............. 496

On the Mechanism of Immunologic Self Recognition. Edward L. Triplett ...................... 505

Immunologic Identity of β-Lactoglobulins A and B. Patricia Gough and Robert Jenness .......... 511

The Effect of Iodination on the Binding of Haptene to Arsonic Antibody. Marian Elliott Koshland, Frieda M. Engberger and Suzanne M. Gaddone ......................................... 517

Demonstration of a Toxin in Mumps Virus and Its Dissociation from Infective and Hemagglutinating Properties.Waldon B. Wacker, Murray M. Lipton and Alex J. Steigman .................. 525

Studies on the Chemotherapy of Viral Infections. III. Anti-Influenza Activities of Glycolal Analogs in Vitro and in Chick Embryo Systems. Claire C. Engle and Oscar C. Liu ........... 531

Enhancement by Endotoxin of the Primary Antibody Response to Bovine Serum Albumin in Chicks. Donald H. Luecke and Louis R. Sibal ........................................ 539

Immunofluorescent Studies with Trachoma and Related Antigens. Roger L. Nichols and Dorothy E. McComb ...................................................... 545

A Comparative Study of the Incidence of Anergy in Patients with Carcinoma, Leukemia, Hodgkin’s Disease and Other Lymphomas. Donald Lamb, Frank Pilney, William D. Kelly and Robert A. Good .................................................. 555

Precipitation of Radiolabeled Poliovirus with Specific Antibody and Antiglobulin. Robert K. Gerloff, Bill H. Hoyer and Leroy C. McLaren ........................................ 559

Enzymatic Inactivation of Immunologically Competent Lymph Node Cells in the “Transfer Reaction.” Branišlav D. Janković and Harold F. Dvorak ............................ 571

Studies on Japanese B Encephalitis Virus Vaccines from Tissue Culture. I. Virus Growth and Survival at 30°C. Skon Rohitayodhin and W. McD. Hammon ......................... 582

Studies on Japanese B Encephalitis Virus Vaccines from Tissue Culture. II. Development of an Attenuated Strain of Virus. Skon Rohitayodhin and W. McD. Hammon .................. 589

Delayed Sensitization to Purified Blood Group Substances in the Guinea Pig. Branišlav D. Janković and Byron H. Waksman ........................................... 598
Plaques Produced by T2r Phage Particles Partly Neutralized by Normal and Immune Guinea Pig Sera. Enver Tali Cetin .................................................................... 609
Isolation and Properties of an Allergen from Dwarf Ragweed Pollen. O. H. Callaghan and A. R. Goldfarb ................................................................................... 612
Demonstration of Multiple Hemagglutinating Factors in Sera of Ragweed-Allergic Individuals with the Help of Immunosorbsents. L. Perelmutter, S. O. Freedman and A. H. Sehon ............ 623
A Tissue Culture Assay for Variola Virus Based upon the Enumeration of Hyperplastic Foci. James B. Pirsch and Elliott H. Purlson ............................................................ 632
Immunodiffusion Studies With Pasteurella tularensis Antigen-Rabbit Antibody Systems. Harold N. Carlisle, Velma Hinchliffe and Samuel Saslaw ......................................................... 638
Studies on Hemolysin Production in Trypan Blue-Treated Rats. David V. Brown and Lorna M. Norlind ............................................................................... 645
The Relationship of Immediate Wheal Reactions to the Repeated Administration of Diphtheria and Tetanus Toxoid. William J. Kuhns ........................................................................ 654
Studies of a Complement-Fixing Antigen from Group A Streptococcal L-Forms. II. Antibody Reactions of Naval Recruits in Streptococcal Outbreaks and Acute Rheumatic Fever. York E. Crawford ........................................... 698
Biological Activities of Aggregated γ-Globulin. V. Agglutination of Erythrocytes and Platelets. Teruko Iizhakza and Kimishige Iizhakza ........................................................................ 709
Effect of Antibody Concentration and Temperature upon Physical Adsorption and Histamine Release. George A. Feigen, Christen B. Nielsen and Geronino Terres ........................................ 717
Mumps Virus Replication. Lucy Treagan and Jacob Fong .............................................................................................................................. 730
Immunoelectrophoretic Identification of Guinea Pig Anti-Insulin Antibodies. Yasuo Yagi, Patricia Maier and David Pressman ....................................................... 736
A Study of Macrophages and Epithelioid-Like Cells from Granulomatous (BCG-Induced) Lungs of Rabbits. Quentin N. Myrvik, Eva Soto Leake and Shunsaku Oshima 745
Studies of Hemagglutination as a Means for Assay of Malignant and Normal Human Tissue Antigens. Bertil Björklund and Jan-Eric Paulsson ......................................................... 759
The Function of Proteolytic Enzymes and Tannic Acid in Inducing Erythrocyte Agglutination. Bernard Pirofsky, Maria Cordova and Theodore L. Imel .................................................. 767
Passive Anaphylaxis in Mice with Homologous Antiserum. II. Reactions due to Circulating and Tissue Antibody. Perry E. Treadwell and A. F. Rasmussen, Jr. ........................................... 775
The Immunologic Behavior of Baby Pigs. I. Production of Antibodies in Three-Week-Old Pigs. Diego Segre and Merlin L. Kaebberle .................................................. 782
The Immunologic Behavior of Baby Pigs. II. Production of Antibodies in Newborn Pigs. Diego Segre and Merlin L. Kaebberle .................................................. 790
Histochemical and Biochemical Changes in the Chorioallantoic Membranes and Allantoic Fluids of Embryonate Eggs Infected with Influenza Virus. Richard Kelly, Donald Greiff and Doris Anderson ................................................................. 815

Studies on Japanese B Encephalitis Virus Vaccines from Tissue Culture. III. Further Selection and Testing of Attenuated Virus Lines from OCT-541. Skon Rohitayodhin and W. McD. Hammon ................................................................. 823

Mechanism of the Immunohematologic Effect of Papain and Related Enzymes. Morton D. Prager, Mary Ann Fletcher and Klara Efron ................................................................. 834

Time and Dose Relationships in the Development of Immunity to Skin Homografts in Mice. L Henry and G. J. Dammin ................................................................. 841

Immune Cytolysis of Three Mouse Ascites Tumors. Arnold E. Reif ................................................................. 849

Activity of Mouse Complement. Leon T. Rosenberg and Dora K. Tachibana ................................................................. 861

Differentiation of Active and Passive Poliomyelitis Antibodies in Human Sera by Indirect Immunofluorescence. John L. Riggs and Gordon C. Brown ................................................................. 868

Effect of Molecular Weight on Uptake of Antigens by Immunologic Aggregates. Robert E. Kahn, Sidney Leskowitz and Francis C. Lowell ................................................................. 874

A Comparison between Cross-Tolerance and Cross-Reaction Induced by Bovine γ-Globulin. H. Timourian and A. M. Schechtman ................................................................. 886

Antibody Formation in the Rat. I. Agglutinin Response to Particulate Flagella from Salmonella typhosa. James Winebright and Frank W. Fitch ................................................................. 891

Antibody Formation in the Rat. II. Agglutinin Response to Soluble Flagellin from Salmonella typhosa. Frank W. Fitch and James Winebright ................................................................. 900

Antibody Responses Induced by Aqueous and Emulsified Influenza Virus Vaccines in Mice Exposed Daily to X-Rays. Byron S. Berlin ................................................................. 906

Specificity of Allergic Reactions. V. Observations on the Systemic Delayed Reaction in Guinea Pigs sensitized to Purified Protein-Conjugates. S. B. Salvin ................................................................. 910
Information for Contributors

Manuscripts should be carefully revised and the original should be sent to

Dr. John Y. Sugg
Journal of Immunology
Cornell Medical College
1300 York Ave.
New York 21, N. Y.

Authors will be charged for space in excess of 10 printed pages and also for all illustrations and tabular or graphic matter in excess of 10 per cent of the pages in each article.

Author's alterations of type or illustrations on proof are charged to the author if in excess of an average of $1.00 per printed page; correction of printer's errors are not charged to the author.

Reprints must be ordered in advance. A table showing cost of reprints, with an order slip, is sent with proof. Orders for purchased reprints must be limited to 1,000 copies. The invoice for reprints will also include charges for illustrations, excess pages and tabular matter, if any.

Instructions for the Preparation of Manuscript

Copy should be typed double-spaced on one side only of 8½ x 11 paper. Even material that is to be set in a type size smaller than that of the main text (footnotes, references, etc.) should be double-spaced.

The author should supply a short title for use as a running head. This should be typed on a separate sheet as the first page of manuscript. Type the complete title of the article on a second sheet, and the authors' names and affiliations on a third sheet. All material that is to be set in a type size different from that of the main text should be typed on separate sheets. This includes tabular matter, case histories, quotations, formulas and other subsidiary matter in the text, footnotes, bibliographies, and legends for illustrations. Displayed formulas which are to be built up to more than one line of type, even if they are the same size type as the text, should be on a separate page. Legends should not be attached to or written on the illustration copy. Positions for tables and figures in the text may be indicated in the margin of the text page.

Manuscripts that do not conform to these instructions will be cut and rearranged so that the matter to be set in different sizes of type can be separated.

Galley proof. Authors will receive galley proofs of their papers set separately as outlined above. Galleys will be arranged in the following order: tables, running heads, footnotes, figure legends, text, bibliography. All material that has been cut from the body of the text will be inserted in its proper place in the galleys. This includes formulas, quotations, case histories, and other subsidiary matter. Manuscript will be arranged in this order: formulas, tables, footnotes, figure legends, text inserts including bibliography, text.

Illustrations. Copy for illustrations should be unmounted glossy photographs clearly identified as to number, author's name, and top of figure in soft crayon on the back. Graphs should be in India ink on bluelined paper. If larger than 9 x 12", they must be accompanied by glossy photographs within this size.
Inhibition of the formation of hypersensitivity pyrogen from delayed hypersensitive cell extract by protease inhibitors in vitro. J. Johanovský and F. Škvařil

Natural and acquired immunity factors interfering with development during the rapid growth phase of Echinococcus granulosus in dogs. M. A. Gemmell

The alexination and conglutination reactions. The reactions between sensitized erythrocytes and horse complement and between alexinated erythrocytes and conglutinin. D. G. Ingram

Transfer of delayed hypersensitivity by lymph node cells in testis autosensitization. Barbara Boughton and H. O. Schild

A note on dilution systems. C. I. C. Ingram

Cytological estimation of proliferating donor cells during graft-versus-host disease in F₁ hybrid mice injected with parental spleen cells. M. Fox

The passive transfer of delayed hypersensitivity in guinea pigs by the transfusion of isotopically-labelled lymphoid cells. J. L. Turk

The separation and antigenic characteristics of some fractions of papain digests of human serum gamma globulins, and the antigenic relationships of some human gamma globulins with the gamma globulins of some other mammalian sera. D. S. Rowe
