IMMUNOLOGY FOR STUDENTS OF MEDICINE

By Humphrey & White

The aim of this book is to give a concise account of current immunological concepts, especially in relation to their application to medicine, dentistry and veterinary practice. For this reason stress is laid on biological rather than immunological aspects, and illustrations are taken so far as possible from experience in Man. The subjects covered are non-specific mechanisms in immunity; the nature of antigens and antibodies; production and metabolism of antibody; antigen-antibody interaction in vitro; prophylactic immunization and passive protection; hypersensitivity of various types; immunological problems of grafts and tumours; autoimmunization and disease.

CLINICAL ASPECTS OF IMMUNOLOGY—Gell & Coombs

A number of distinguished experts review current methods and ideas on the diagnosis and investigation of disease in which the immunological approach is used, with a special emphasis upon the developing subject of immunopathology. Their purpose is to provide the clinician with a guide, at all points where immunology impinges upon clinical practice, to the basic principles of the methods used and the essentials of the results obtained in recent work in this field. The contributors include F. O. MacCallum, J. Pepys, L. E. Glynn, E. J. Holborow, J. V. Dacie, B. Cruickshank and C. D. Calnan.

Edited by P. G. H. GELL, M.B., B.CH., Professor of Immunological Pathology, University of Birmingham; and R. R. A. COOMBS, M.R.C.V.S., B.SC., PH.D., Assistant Director of Research, Department of Pathology, University of Cambridge. 484 pages, Illustrated. About $10.00.

THE SEROLOGY OF CONGLUTINATION AND ITS RELATION TO DISEASE—Coombs

Conglutination is a phenomenon which, since its first description in 1906, has been a source of much debate and controversy. Investigations in recent years have clarified much of the confusion, and have shown that conglutination has a rightful place in immunology. Dr. Coombs and his co-authors are unusually well qualified to write on this subject, in the development of which they have played a leading part. The inclusion of an appendix on technical procedures makes the book additionally useful as a laboratory manual.

Diagnostic Reagents
for the Determination of

ANTISTREPTOLYSIN TITERS

*Bacto-Streptolysin O Reagent* is a standardized reagent recommended as an aid in the diagnosis of Rheumatic Fever, Glomerulonephritis and other diseases associated with Group A streptococcal infections.

SENSITIVITY TESTS

The significance of determining bacterial sensitivity is accentuated by the discovery of increasing numbers of antibiotics, sulfonamides, and other chemotherapeutic agents and the development of resistant organisms to one or more of these compounds. Sensitivity or resistance is easily determined with Bacto-Sensitivity Disks.

HETEROPHILE ANTIBODIES

The differential diagnosis of Infectious Mononucleosis requires the use of standardized heterophile reagents:

- Bacto-Guinea Pig Kidney Antigen, Desiccated and Suspension
- Bacto-Beef Cell Antigen, Desiccated and Suspension

BLOOD COAGULATION

Prothrombin determinations require accurately prepared interstandardized reagents:

- Bacto-Thromboplastin
- Bacto-Prothrombin 2 Stage Reagent
- Bacto-Prothrombin Free Beef Plasma
- Bacto-Prothrombin Free Rabbit Plasma
- Bacto-AC Globulin
- Bacto-Sodium Chloride 0.85 Per Cent
- Bacto-Sodium Oxalate Solution 0.1 Molar
- Bacto-Calcium Chloride Solution 0.02 Molar

LIVER DISEASE

Differential diagnosis of hepatic disturbances is aided by standardized reagents:

- Bacto-Cephalin Cholesterol Antigen
- Bacto-Thymol Turbidity Reagent
- Bacto-Kingsbury Turbidity Standards
- Bacto-Thromboplastin and other Prothrombin Reagents

RENAL FUNCTION

*Phenolsulfonphthalein Ampules, Difco* is a carefully prepared injectable recommended for use in determining renal excretion rate.

HEMAGGLUTINATION
OF RED BLOOD CELLS

Accurately determined by the use of:

- Bacto-Trypsin 1% for Hemagglutination
- Bacto-Hemagglutination Buffer
- Trypsin, Difco, 1:250
- Bacto-Bovine Albumin 30%
- Bacto-Phytohemagglutinin

Difco Laboratories
