Conceptual Advances in Immunology and Oncology

The new work described here will facilitate the investigation of immunologic phenomena at submolecular levels. In addition to the original formal papers the book incorporates the stimulating discussions which took place at the conference in which both speakers and audience participated.

The book is conveniently organized in five major topical sections and one special section: theories of antibody production; control mechanisms of antibody synthesis; the nature of the antigen-antibody reaction; transplantation and immunologic tolerance; cancer-specific antigens; immunology of tissue transplantation.

Publication of this symposium now makes available for ready reference a wealth of new information, carefully organized and thoroughly indexed, which will be of immediate value to a wide audience of biologists, immunologists, biochemists, and pathologists.

571 pages, 150 illustrations, 86 tables, $16.00

Pollard's Perspectives in Virology III

New Book by 22 Authorities. This new book surveys the whole field of virology and emphasizes in particular those areas in which significant advances are being made. It incorporates the papers delivered at the proceedings of the Third Gustav Stern Symposium on "Perspectives in Virology" which was arranged in honor of the late Thomas M. Rivers, M.D.

Of special interest and current significance are discussions of the chemotherapy of herpetic keratitis in man, the laboratory propagation of human hepatitis virus, and the compilation and analysis of viruses causing human respiratory diseases.

You will find, too, a detailed description of an entirely new method for analyzing viral protein in relation to the nucleotide sequence of the viral genome.

Among the outstanding features of this new book are precise and exceptionally clear presentations of methods used for the interpretation and the significance of the genetic code; the unique structural analyses of viruses; and the clarification of the epidemiology, and laboratory propagation, of human hepatitis virus. And, in keeping with the book's emphasis on the latest advances, you will find a discussion of the first successful chemotherapy of viral infection in man; the new classification of respiratory viruses; and the new interpretation on the autonomy of the neoplastic wall.

By 22 Authors. Edited by MORRIS POLLARD, D.V.M., Ph.D., University of Notre Dame, Louband Laboratory. 314 pages, 127 illustrations, $10.50
Disposable Plastic Trays
For Laboratory Titrations
Serological • Chemical • Microbiological

Use in Place of Test Tubes

Saves, TIME, SPACE and MONEY!

* 6 Models Available
* Cup Sizes from Micro 0.25ml Up To 3cc In Clear and White

DISPOSO-TRAYS
Are used in the same manner as a rack of test tubes in:
- Diagnostic complement-fixation tests
- Hemagglutination-inhibition tests
- Assaying virus
- Measuring antibodies in tissue culture
- Serial dilutions
- Many types of spot tests

New Bio-Autograph Tray Available in Two Sizes

New Miniature Micro Disposo-Tray

New Bio-Assay Discs

LINBRO CHEMICAL CO. INC. 681 DIXWELL AVE., NEW HAVEN, CONN, U.S.A.
Manufacturers of 7X, Non-Toxic for Tissue Culture
A mixture of 1, 2 Dimethyl 4 (p carboxy phenylazo) 5 Hydroxy Benzene (CPA) and 1, 2 Dichloro 4 Benzene Sulfonamido 5 Nitro Benzene (DCBN) when fed to mice of the SPFS strain bearing spontaneous mammary cancers, cured permanently about one third of the animals.

The investigators adjudged the permanency of the cure of the cancers when the neoplasm decreased in size, disappeared and remained undetectable for at least 5 months.(1).

The maximal number of cures was obtained with 6 grams of CPA and 0.5 grams of DCBN per kilo of ration. This represents the first case of the cure of such cancers by any chemical agent.

These biochemicals were conceived on the basis of a demonstration that spontaneous cancer differed from normal host tissues in that they synthesized vitamin B12.

Previously it was demonstrated that certain spontaneous mammary cancers of mice differed from normal mouse tissues in that cancer cells synthesized Vitamin B12 (?) (2). This metabolic difference allowed the prediction and the realization of antimetabolites poisonous to the cancers that are harmless to the host mice (4) (5).

These new anti-cancer agents, (CPA) and (DCBN) are members of a series of antimetabolites which have been shown to inhibit biosynthesis of Vitamin B12 in microorganisms. It was reported that these biochemicals demonstrated no detectable harmful effects on the host mice as the dosage used to bring about the desired results.

CPA and DCBN are available on 24-hour delivery basis anywhere in continental USA. Call 216-662-0212 or write Nutritional Biochemicals Corporation, 21010 Miles Avenue, Cleveland 28, Ohio.

All chemicals described are for chemical and investigational use only. They are not offered for clinical or drug use. The literature reference should not be interpreted as either an endorsement or disapproval of the biochemical by the cited investigator.

New Features. Fully revised; every term reviewed; hundreds rewritten; obsolete words deleted. Approximately 10,000 new words and definitions added. 31 New full-page plates, hundreds of new text figures by top-flight medical artists. Related terms arranged in 119 tables under such headings as Acids, Alcohols, Amputations. Completely reset in new format for maximum readability and convenience; thumb-indexed for rapid use. Nomina Anatomica Parisiensia used throughout with cross-references to older terms where necessary. Latin and Greek etymology retained from previous editions for student needs. Dental and veterinary terms included.

From the Preface. "When it became apparent that the 20th edition needed thorough revision, it was also apparent that the best way to bring about the desired result was to seek the cooperation of a group of experts in the several phases of medical lexicography. . . . "Without exception, every entry in the 19th edition came under scrutiny. Thousands of new definitions were written. And of course thousands of new entries have been inserted. Our editors solicited the assistance of friends and colleagues in turning up new words. Members of our own staff were also alerted to report new words—no trivial matter, since we publish many medical periodicals and thus have opportunity to see many new words even before they get into print. . . . "Though we shall abide by the conventions and call this the 20th edition, the changes have been so sweeping that it is probably more nearly correct to call it a new book. We think of it that way. And so we offer to the interested public the new and greater Stedman's in the hope, almost the assurance, that it will serve the public as never before."
