Andrewes:
VIRUSES OF VERTEBRATES

By Sir Christopher Andrewes, M.D.,
F.R.C.P., F.R.S., Wellcome Trust Fellow;
Formerly Deputy Director, National Insti-
tute for Medical Research, Mill Hill,
London

For some time, researchers and practi-
tioners have noted an acute need for a
book in virology which would corre-
spond to the place held in bacteriology
& Wilkins Company is proud to an-
nounce this book by Sir Christopher
Andrewes—a man who enjoys the reputa-
tion of being "the dean of viral no-
menclature."

Viruses of Vertebrates is a new book of
major importance, and will become the
standard reference in its field, providing
essential information on all viruses which
affect man and other vertebrates.

CONTENTS BY PARTS: RNA Viruses.
DNA Viruses. Unclassified Viruses. Chla-
mydozoa. Note on Virus Classifica-
tion. Index.

1964 420 pp., 5 tables $11.50
**B-B-L Reagents for fluorescent antibody techniques**

**REAGENTS FOR FLUORESCENT TREPONEMAL ANTIBODY TEST**
- Treponema pallidum (Nichols) Suspension, Desiccated
- Anti-Human Globulin, Fluorescein-Labelled, Desiccated
- Photophosphate Buffered Saline, pH 7.2, Powder
- FTA Standard Reactive Control Serum
- FTA Standard Non-Reactive Control Serum

**REAGENTS FOR OTHER FLUORESCENT ANTIBODY TECHNIQUES**
- Fluorescein Isothiocyanate Rabbit Bone Marrow Powder
- Tetramethylrhodamine Isothiocyanate Anti-Human Gamma Globulin
- Guinea Pig Liver Absorption Powder Anti-Human Globulin
- Rabbit Brain Absorption Powder Fluorescein-Labeled Anti-Human Globulin
- Rabbit Liver Absorption Powder Rhodamine-Labeled
- Mouse Liver Absorption Powder Normal Mouse Brain Suspension
- Guinea Pig Liver Absorption Powder Sterile, Lyophilized
- Bovine Albumin Rhodamine-Labeled
- Counterstain
- Group A Streptococcus Test Reagent
- Group A Streptococcus Negative Control Reagent

**focus on fluorescence**

Microbiologists tell us that reactions are more sharply defined with B-B-L "performance-tested" reagents which make antigen-antibody reactions more clearly visible by fluorescence microscopy—with less nonspecific background interference.

Foremost in fluorescent antibody techniques, B-B-L was FIRST with chromatographically-pure labeling compounds FIRST with all reagents for the FTA test FIRST with high-quality fluorescein-labeled anti-rabies globulin.

*And now, FIRST AGAIN with lyophilized, Fluorescein-Labeled Test Reagent for Group A Streptococcus—a specific reagent designed for use in the one-step fluorescence-inhibition method.

Products of B-D LABORATORIES are available through your local distributor.

**B-D LABORATORIES, INC., RUTHERFORD, NEW JERSEY**
Save reagents...do eight 12-step serial dilutions in less time and space than your lunch!

The calibrated loop, micro technic has proven itself to be economical, fast and accurate. Using the Microtiter®, 500 viral titrations can be done in one day by only four people. Ordinarily, this would take fifteen people five days. In this system, a transparent plate just 3 1/2" x 5" takes the place of 96 test tubes. With very little practice, you can perform eight serial dilutions simultaneously. And the Microtiter system saves eight times the amount of reagents and sera required in the test tube method, yet results are equal in reliability and reproducibility.

The Microtiter system has been proved in tests such as: complement fixation, hemagglutination inhibition, as well as ox cell hemolysin, anti-streptolysin titration, heterophile antibody agglutination, and metabolic inhibition. Order an introductory set today . . . it's the most convincing way to prove the value of this system in your own laboratory.

No. B1195—Microtiter® System Introductory Set: 2 plates, 2 pipettes and 4 loops complete with directions for comparing with test tube technic . . . $59.50.

*Developed and manufactured by Cooke Engineering Co.
Antimicrobial Agents and Chemotherapy—1963

Washington, D.C.
October 28-30, 1963

Sponsored by the American Society for Microbiology

Reports of basic research on the new antibiotics gentamicin, lincomycin, relosin, doricin, neutramcin, MSD-235, and others
Clinical evaluations of cephalothin, penicillin, nafcillin, ampicillin, oxacillin, and other antibiotics
Communications of interest to microbiologists, chemists, pharmacologists, biochemists, clinicians, and pathologists
A valuable reference for laboratories and libraries

Edited by: J. C. Sylvester

806 pages $12.00 1964

To: AMERICAN SOCIETY FOR MICROBIOLOGY
115 Huron View Blvd., Ann Arbor, Michigan

Please enter my order for _____ copy(s) of Antimicrobial Agents and Chemotherapy—1963 at $12.00 per copy.

I also wish to order:

_______ copy(s) of the 1962 volume at $12.00 per copy.

_______ copy(s) of the 1961 volume at $10.00 per copy.

[ ] Bill me. [ ] Payment enclosed.

(Make checks payable to American Society for Microbiology.)

Parish & Cannon: ANTISERA, TOXOIDS, VACCINES AND TUBERCULINS IN PROPHYLAXIS AND TREATMENT, 6th edition

"The gratifying demand for the Fifth Edition made it necessary for the publishers to call for a new edition earlier than anticipated. The authors have responded by making a thorough revision of the text—more drastic than appeared to be required at the outset. New material has been added, especially in the chapters on Smallpox Vaccine, Poliomyelitis Vaccine, Combined Active Immunization, Immunization Schedules and Personal Medical Records. The illustrations have also been revised and brought up-to-date."—From the Preface to the Sixth Edition

1962 • 323 pp., 9 figs., 48 pls. (13 col.) • $8.50

THE WILLIAMS & WILKINS COMPANY
418 E. PRESTON STREET/BALTIMORE, MARYLAND, U.S.A. 21202

IMMUNOCHEMIST

The Ortho research foundation, recognized for advanced work in immunology, has an opportunity for a M.S. or experienced B.S. in immunohemistry, serology or biochemistry to assist in fundamental research leading to new immunological diagnostic approaches.

Attractive suburban location in Central New Jersey, full benefit program including educational assistance, moving expenses paid.

WHERE EXACTING PRODUCT REQUIREMENTS**

*especially laboratories specializing in:

- Virus Vaccines
- Virology
- Tissue Culture
- Genetics
- Research
- Immunology

**including such media categories as:

- Experimental Biology
- Cancer Research
- Cellular Research
- Toxicology
- Space Biology
- Serum, Serous Fluids
- Agamma Serums
- Serum Ultrafiltrates
- Balanced Salt Solutions
- Synthetic Media
- Embryo Extracts and Embryo Ultrafiltrates
- Media Formulations
- Special Blood Fractions
- and Antiserums
