IMMUNOLOGY

Official Journal of the BRITISH SOCIETY FOR IMMUNOLOGY

Editor: L. E. GLYNN

VOL. 9, NO. 4

OCTOBER 1965

CONTENTS

Thérèse Neveu and G. Biozzi: The effect of decomplementation on delayed-type hypersensitive reactions to a conjugated antigen in rats

M. Malkinson: The transmission of passive immunity to Escherichia coli from mother to young in the domestic fowl (Gallus domesticus)

F. S. Stewart and Mary McLoughlin: A red-cell sensitizing antigen of group D streptococci

E. A. Catsoulis, E. C. Franklin and M. A. Rothschild: Cryoglobinaemia in rabbits hyperimmunized with a polyvalent pneumococcal vaccine

G. J. V. Nossal, Caroline M. Austin and G. L. Ada: Antigens in immunity. VII. Analysis of immunological memory

G. J. V. Nossal, G. L. Ada, Caroline M. Austin and J. Pye: Antigens in immunity. VIII. Localization of 125I-labelled antigens in the secondary response

Linda D. Caven and L. T. Rosenberg: Complement in skin grafting in mice

M. Adinolfi: Further attempts to characterize the normal incomplete cold antibody

K. D. Beernink, Janine Courçon and P. Grabar: Immunochemical studies on bone marrow of the rat

Lotte Hulliger and E. Sorkin: Formation of specific antibody by circulating cells

C. F. Doré and Brigid M. Balfour: A device for preparing cell spreads

The Subscription price in the United States and Canada is $40.00 for two volumes of six parts per year (Single copies $4.00 each)

BLACKWELL SCIENTIFIC PUBLICATIONS

24-25 BROAD STREET, OXFORD, ENGLAND
THE JOURNAL OF IMMUNOLOGY

Information for Contributors

Manuscripts should be carefully revised and the original should be sent to

Dr. John Y. Sugg
Journal of Immunology
Cornell Medical College
1300 York Ave.
New York, N. Y. 10021

Authors will be charged $35.00 per page for all pages in excess of 6 per article.

Author's alterations of type or illustrations on proof are charged to the author if in excess of an average of $1.00 per printed page; correction of printer's errors are not charged to the author.

Reprints must be ordered in advance. A table showing cost of reprints, with an order slip is sent with proof. Orders for purchased reprints must be limited to 1,000 copies. The invoice or reprints will also include charges for illustrations, excess pages and tabular matter, if any.

Instructions for the Preparation of Manuscript

Copy should be typed double-spaced on one side only of 8½ x 11 paper. Even material that is to be set in a type size smaller than that of the main text (footnotes, references, etc.) should be double-spaced.

The author should supply a short title for use as a running head. This should be typed on a separate sheet as the first page of manuscript. Type the complete title of the article on a second sheet, and the authors' names and affiliations on a third sheet. All material that is to be set in a type size different from that of the main text should be typed on separate sheets. This includes tabular matter, case histories, quotations, formulas and other subsidiary matter in the text, footnotes, bibliographies, and legends for illustrations. Displayed formulas which are to be built up to more than one line of type, even if they are the same size type as the text, should be on a separate page. Legends should not be attached to or written on the illustration copy. Positions for tables and figures in the text may be indicated in the margin of the text page.

Manuscripts that do not conform to these instructions will be cut and rearranged so that the matter to be set in different sizes of type can be separated.

Galley proof. Authors will receive galley proofs of their papers set separately as outlined above. Galleys will be arranged in the following order: tables, running heads, footnotes, figure legends, text, bibliography. All material that has been cut from the body of the text will be inserted in its proper place in the galleys. This includes formulas, quotations, case histories, and other subsidiary matter. Manuscript will be arranged in this order: formulas, tables, footnotes, figure legends, text inserts including bibliography, text.

Illustrations. Copy for illustrations should be unmounted glossy photographs clearly identified as to number, author's name, and top of figure in soft crayon on the back. Graphs should be in India ink on bluelined paper. If larger than 9 x 12, they must be accompanied by glossy photographs within this size.
METHODS OF SEROLOGICAL RESEARCH

By J. B. KWAPINSKI, Head of the Section of Microbiology, University of New England, Australia

This is a comprehensive reference work that covers all serological methods described in the scientific literature for the preparation of antigens. It is specifically designed to assist the researcher in any project involving a serological technique.

The book supplies not only the technical details for each method but also an expert evaluation of its usefulness in particular research applications. For each reference, the author has made a classification of the serological tests, and each chapter deals with a specific class of test.

Some of the topics are: The origin and development of serological antigens research; antibodies; the agglutination, precipitation, diffusion, flocculation and hemagglutination tests; lytic tests; complement and proprordin assays; the complement-fixation and serological inhibition and neutralization tests; tests for incomplete antibodies and antigens and celluhotropic and histiotropic antibody reactions.

The book also contains a large bibliography.

1965 Approx. 720 pages Prob. $18.50

HEAD OF BIOLOGICAL LABORATORIES

Exceptional challenge to dedicated scientist with capabilities in research and administration interested in opportunity to conduct original and basic research—to run own operation—to achieve national prominence in one of newest and most rapidly expanding fields in ethical drugs.

Basic training fields of biochemistry, bacteriology or immunology. Experience in production of vaccines, biologicals, pathogenic and non-pathogenic organisms highly desirable. PhD or DVM degrees preferred. Location—N. Y.-Conn. area.

Complete resumes, including duties, compensation, specific area of research handled, supervisory experience. Our people know of this position. Confidences respected.

Write: Box 666 Plandome, New York

Andrewes:

VIRUSES OF VERTEBRATES

For some time, researchers and practitioners have noted an acute need for a book in virology which would correspond to the place held in bacteriology by Bergey's Manual. This book has at last been written, by Sir Christopher Andrewes—a man who enjoys the reputation of being "the dean of viral nomenclature." Viruses of Vertebrates is a new book of major importance and will become the standard reference in its field.

Bahr & Zeitler:

QUANTITATIVE ELECTRON MICROSCOPY

This book records the proceedings of a Symposium held at the Armed Forces Institute of Pathology from March 30 to April 3, 1964. The material appeared as a special supplement to the journal Laboratory Investigation, June, 1965.

"The purpose of this Symposium was to define the state of quantitative techniques in electron microscopy with special reference to life sciences. The term 'Quantitative Electron Microscopy' is meant to encompass procedures which render quantitation of properties under study that can be obtained only by electron microscopy. Thus the counting of particles and the determination of linear or cross-sectional thickness; of thickness, mass thickness, and weight; and finally of the chemical composition of objects too small for light microscopy are in the scope of quantitative electron microscopy..."

"In planning the Symposium, we selected topics and speakers according to our view of what was important. We asked each speaker to review his field, including the significant results of others. The particular selection of topics was not meant to limit quantitative electron microscopy but rather to demonstrate its essentials."—from the Preface.

Organized and edited by Gunter F. Bahr and Elmar H. Zeitler, Biophysics Branch, Armed Forces Institute of Pathology, Washington, D. C.
