Radioimmunoelectrophoretic Study of Rabbit Anti-Protein Antibodies during the Primary Response. M. J. Freeman and A. B. Stavitsky .......................................................... 981

The Heterogeneity of Combining Sites of Antibodies as Determined by Specific Immunoabsorbents. III. Further Characterization of Purified Antibody Fractions Obtained from Anti-p-Azobenzoate Antibodies. Masayasu Kitagawa, Yasuo Yagi and David Pressman .......................................................... 991

Characterization of the Antibody for Vibrio Fetus Endotoxin in Sera of Normal and V. Fetus Infected Cattle. A. J. Winter .......................................................... 1002

The Contrasting Immunosuppressant Effects of Acriflavine and Dietary Restriction. Joel S. Samuelson, Sumner C. Kraft and Richard S. Farb .......................................................... 1013

Changes in Mouse Serum Proteins during Acute and Chronic Infection with an Intracellular Parasite (Toxoplasma gondii). Jack S. Remington and Robert Hackman .......................................................... 1023

Studies on the Catabolism of γG Subunits and Chains. H. L. Spiegelberg and W. O. Whingle .......................................................... 1034

Skin-Sensitizing Activity Related to γ-Polypeptide Chain Characteristics of Human IgG. William D. Terry .......................................................... 1041

Enhancement of Immune Responses in Mice by a Booster Injection of Coccidioides Spherules. YIch-Chi M. Kong, D. C. Savage and H. B. Levine .......................................................... 1048

Inactivated Measles Virus Vaccine. I. Effect of Storage on Vaccine Prepared in Canine Renal Tissue Cultures. L. J. Lewis, D. C. Carpenter, F. Pance and E. Winnicki .......................................................... 1057

The Role of Lysosomes in Hypersensitivity Reactions: Tissue Damage by Polymorphonuclear Neutrophil Lysosomes. Edward S. Golub and John K. Spitznagel .......................................................... 1060

Anaphylatoxin Formation by Purified Human C1 Esterase. W. Dias da Silva and Irwin H. Lepow .......................................................... 1080

Influenza Virus Growth and Antibody Response in Amantadine-Treated Mice. W. L. Davies, R. R. Grunert and C. E. Hoffmann .......................................................... 1090

Antigenicity of Polypeptides (Poly-α-Amino Acids). XVII. Immunologic Studies in Humans with Polymers Containing L or D and L-α-Amino Acids. Paul H. Maurer .......................................................... 1095

Comparison of the Inactivation and Antigenicity of Foot-and-Mouth-Disease Virus by Acetylsalicylic Acid and by Combined Effect of Ultraviolet Light and E-Propiolactone. O. N. Fellowes .......................................................... 1100

The Occurrence of Psittacosis Virus Complement-Fixing (CF), Noncomplement-Fixing (NCF) and Neutralizing (N) Antibodies in Domestic Pigeons. F. F. Piraino .......................................................... 1107

Enterovirus Hemagglutination: Inhibition by Several Enzymes and Sugars. A. Martin Lerner, Elizabeth Jane Bailey and James R. Tilloson

Host-Virus Interaction in Visna Infected Sheep. Magnhét Guðnadóttir and Páll A. Pálsson

The Blocking Effect of West Nile Virus on Production of Sarcoma by Rous Virus in Chickens. Manohar V. Shethkar

Some Influences of Antigen Concentration and Nonreacting Additives on Mobility and Diffusion in Immunoelectrophoresis. Warren J. Russell

The Adjuvant Action of Latex Particulate Carriers. Stephen D. Litwin and Jacques M. Singer

Systemic Anaphylaxis Produced in Guinea Pigs by Soluble Bovine Serum Albumin-Antibody Complexes. Mortimer Litte

Pease: L-FORMS, EPISOMES AND AUTO-IMMUNE DISEASE

This book offers an explanation of the cause of certain diseases which produce lesions by immune reactions, notably rheumatid, nephritic and hemolytic diseases. The hypothesis advanced is that these immune reactions are caused by sub-cellular units of bacteria (L-forms and pleuropneumonia-like organisms) which either synthesize or induce synthesis of the destructive antigens, enzymes and toxins.

Dr. Pease is a researcher who has been much concerned with studies of the relationship between bacteria and various subcellular infective elements, and certain agents regarded as viruses.

By Phyllis Evelyn Pease, Ph.D., Lecturer in Virology and Bacteriology, University of Birmingham.

1965 92 pp., 3 figs. $4.00
