The N.I.L.-Saravis Immunoelectrophoresis Apparatus for Cellulose Acetate

Eliminates handling, sample applicators, and humidifying cabinets. Clamp-on cell can be inserted singly or as a pair in the 5-5050 All-Media Process Cell.

- Bulletin 5-2400

Human Gamma Globulin Against Anti-Human Immune Horse Serum
Ninety percent of all rodent breeder colonies harbor latent virus infection*. This means that research using untested animals is a kind of "Russian roulette" in which months of work can be ruined. But you don't have to play that game. Microbiological Associates is now offering a new serological testing service for the more common murine viral antibodies. Tests can be performed either on the live animal or on serum specimens. Your inquiries are welcome.

*National Cancer Institute Monograph #20, February, 1966.
Andrewes:

VIRUSES OF VERTEBRATES

For some time, researchers and practitioners have noted an acute need for a book in virology which would correspond to the place held in bacteriology by Bergey's Manual. This book has at last been written, by Sir Christopher Andrewes—a man who enjoys the reputation of being "the dean of viral nomenclature." Viruses of Vertebrates is a new book of major importance and will become the standard reference in its field.

1964 420 pp., 5 tables  $11.50

THE WILLIAMS & WILKINS COMPANY

THE JOURNAL OF IMMUNOLOGY

Information for Subscribers

Published monthly, beginning January, 1929. (From 1916–1925, and in 1928 Volumes I–X, inclusive, and Vol. XV published bi-monthly.)

The subscription price is $28.00 per year in U.S.A.; $29.25 in Canada; $30.00 elsewhere. Single copies, when available, are $2.75 in U.S.A.; $3.00 elsewhere. The subscriptions of members of the American Association of Immunologists are included in the membership dues and are handled by the Association's Treasurer, Dr. Sheldon Dray, American Association of Immunologists, 9650 Wisconsin Avenue, Bethesda, Md. 20014. All other subscriptions should be sent to the publishers.

Change of address: Publisher must be notified 60 days in advance. Journals undeliverable because of incorrect address will be destroyed. Duplicates can be obtained (if available) from the publisher at the regular price of single issues.

New subscriptions and renewals are entered to begin with the first volume of the year when subscription is received. Should any issue of the current volume be out of print at the time the subscription order is received, the pro-rata value of such numbers will be refunded to the subscriber.

Subscriptions should be renewed promptly: To avoid a break in your series, subscriptions should be renewed promptly. The publishers cannot guarantee to supply back issues on belated renewals.

Correspondence concerning all business matters should be addressed to

Simple, automatic nucleic acid analysis... with the Beckman Tm Analyzer Accessory

Insert the sample, set two controls, and the Tm Analyzer completes the analysis... automatically and accurately. The temperature programmer-controller precisely programs the rate of temperature change. The sample compartment, which is designed to fit your Beckman DB® or DK® Ultraviolet Spectrophotometer, keeps the sample at regulated temperatures during continuous spectrophotometric measurement. The temperature in the compartment may be sensed by a precalibrated platinum probe and bridge sensor, depending upon the sensitivity required. And both temperature and absorbance can be recorded automatically on an X-Y or multipoint recorder.

All of the advantages of this advanced technique... plus automatic operation... are yours with the new Beckman Tm Analyzer. For additional information, contact your local Beckman Sales Representative. Or write for Data File LM-666-Sp.
Rhodes & van Rooyen: TEXTBOOK OF VIROLOGY, 4th edition

"Advances in the subject of medical virology have occurred so rapidly that a new edition of this book has been required after four years, and the text has been almost completely rewritten. It remains our chief purpose in this edition to present an up-to-date account of medical virology suitable for students and practitioners of medicine, public health, microbiology, and other health sciences. The major change in this edition has been to arrange the descriptions of the various virus infections according to the biologic properties of the causal viruses, and not according to clinical, pathologic, or epidemiologic features of the disease. We have adopted the newer concepts of classification in which stress is laid both on the intimate morphology of the virus particle as shown by electron microscopy and on antigenic relationships between certain members in each group."—From the Preface to the Fourth Edition

The new edition of this widely acclaimed work has many new tables and figures, presenting the busy reader with the information he seeks in its most convenient and readily understood form.

The major part of the revision has been carried out by Drs. Rhodes and van Rooyen; several colleagues contributed chapters. D. M. McLean, of the University of Toronto, contributed a number of chapters in the Arborvirus Group; A. J. Beale, of the Virus Research Unit, Glaxo Laboratories, Buckinghamshire, England, a chapter on poliomyelitis; D. B. W. Reid, of the University of Toronto, a chapter on statistical methods; L. Siminovitch of the University of Toronto, a chapter on tumor viruses; and K. R. Roze, of Dalhousie University, Nova Scotia, a chapter on cell culture methods in virology.

By A. J. Rhodes, M.D., F.R.C.P.(Edin.), F.R.S.C., Director, School of Hygiene, University of Toronto; Professor of Microbiology, School of Hygiene, University of Toronto; and Consultant Virologist, The Hospital for Sick Children, Toronto; and C. E. Van Rooyen, M.D., D.Sc.(Edin.), M.R.C.P. (Lond.), F.R.C.P.(C), Professor of Bacteriology, Dalhousie University; Bacteriologist, The Victoria General Hospital; Consultant Bacteriologist, Camp Hill Hospital, Department of Veterans Affairs; Consultant Virologist, The Canadian Forces Hospital, Halifax, N.S. With the Assistance of Contributors.

1962 • 635 pp., 150 figs., 60 tables • $13.50

VIRUSES,
NUCLEIC ACIDS,
AND CANCER

Facts, ideas, theories, discussions presented by 78 internationally known cancer researchers, and converging on the solution of the human cancer problem, make this book a relatively complete picture of all now known in the field. The viral concept of oncogenesis, applied to human cancer, is still only a working hypothesis. Many basic and unanswered questions block access to an ultimate solution. During this symposium, reports on recent work were given, and partial answers supplied to some of the problems cancer researchers are focusing on today.

Published for The University of Texas M. D. Anderson Hospital and Tumor Institute. Edited by Russell W. Cumley, Ph.D., University of Texas Medical Center, Houston.

1963 704 pp., 288 figs. $16.00

HEPATITIS-INFECTIOUS MONONUCLEOSIS (HIM)
ANTIBODY TEST

* A definitive test for differentiation between viral hepatitis-infected mononucleosis and other liver disease
* A negative HIM-TEST in jaundiced patients rules out viral hepatitis or IM as the cause of hepatic disease.1
* Complement fixation antibody and HIM agglutinin did not react with 60 different viruses which cause disease in man.2, 3
* Virus isolated from blood of volunteers with icteric hepatitis (injected with NIH icterogenic plasma pool No. 6) in tissue culture was adsorbed on latex particles to form a reagent for detecting agglutinins in hepatitis sera.4, 5, 6, 8 Testing sera of the original volunteers, agglutinin was absent before injection, titered 1:10 or more 14 days after injection and 1:40 or more during convalescence. Agglutinin was demonstrated in 100% of 81 cases of acute viral hepatitis, 100% of 60 cases of infectious mononucleosis, 20% of 20,000 blood donors. Virus which reacted with serum agglutinin was isolated from 15 sera, from 4 stools and from liver in 3 of 81 cases of hepatitis. One isolate was from the liver of a 3-year-old child who died of hepatitis but also met all hematologic criteria of infectious mononucleosis. Infectious mononucleosis agglutinin was not removed by guinea pig kidney, completely removed by bovine erythrocytes; hepatitis agglutinin partially removed by guinea pig kidney, completely removed by sheep or bovine erythrocytes. This virus, and an IH virus from the liver of a fatal case, now maintained in tissue culture for two years, are serologically identical with isolates from volunteers.

7. Bolin, V. S., Chase, B. S., Mann, F. D., Alsever, J. B. Similar viral isolates and antibodies from hepatitis and infectious mononucleosis. (Submitted).

Tetrazolium Salts were first described in 1892 but not studied extensively until 1941. Recent study, however, has confirmed their great value for research investigations in enzymology, histochemistry, bacteriology, plant biology and radiation effects due to their ability to be reduced to an easily identifiable color in viable tissue.

Now, your lab can acquire complete initial stock of all available Tetrazolium Salts in 100 mg. containers for just $53.50. When ordering, specify NBCo Tetrazolium 32 Kit. Included among the 32 Tetrazolium Salts in the kit are:

- Triphenyl Tetrazolium Chloride
- Blue Tetrazolium
- Iode NitroTetrazolium Chloride
- Neotetrazolium Chloride
- Tetraniuio Blue Tetrazolium Chloride
- Nitro BT
- M-Nitro Neotetrazolium Chloride (M-Nitra NT)
- 3 (4,5 Dimethyl Thiazoly1 1 - 2) 2,5 Diphenyl Tetrazolium Bromide
- Additional salts, derivatives of the preceding, now offered for the first time.

NBCo offers stat service on Tetrazolium Salts. Phone collect, 216-662-0212 (USA only). NBCo will process your order and guarantee shipment within 60 minutes of your call; one-day delivery anywhere in the continental USA, 80 hours anywhere in the world. Send for our free catalog containing more than 3000 items.
