THE N.I.L. - TAKATSY
MICROTITRATOR®

The Original Apparatus for
Precise High-Speed Delivery or
Dilution of Micro Volumes of Fluid

LEAST EXPENSIVE, MOST
ACCURATE, AND NEWEST
EQUIPMENT FOR
SEROLOGICAL TITRATIONS

FULL MICROTITRATOR® INCLUDES:

TAKATSY
LOOPS
- Individually calibrated to pick
  up and deliver exactly 0.025
  or 0.05 ml of a standard 0.85%
  normal saline solution. May be
  flamed or disinfected chemi-
  cally.

PLATES
- Rigid disposable plastic plates
  with conical or round-bottomed
  wells, each 0.3 ml working
  volume. Impervious to formalin
  sterilization and sterilizable in
  U. V. light.

CALIBRATED
DROPPERS
- Pipette drops with ground male
  Luer tips, fitted with suction
  adapter and disposable cellulose
  acetate filter cartridge. Dropping
  tips calibrated to deliver 0.025 ml/drop.

ACCESSORY
EQUIPMENT
- Includes fitted mahogany case,
  tape roller, well-sealing tape,
  loop stand, and dropper rack.

Price of complete equipment:
$195.00.

TRIAL KIT
- To encourage familiarity with
  this time-saving and material-
  saving technique a trial kit is
  available, consisting of 2 con-
  ical and 2 round-bottomed
  plates, 2 Takatsy loops, 2 dro-
  pers and tips, a plastic case,
  and a full set of instructions.
  Price: $32.50.

Now includes the new Takatsy
platinum loops:
- Guaranteed accurate within 1%.
- Maintain their calibration
  indefinitely.
- Never need replacement.
- Obtainable separately.

Price: $32.50.

ADVANTAGES
OF THE NEW PLATINUM TAKATSY LOOP*

1. Closed single-piece platinum loop as-
   surces permanent dimensional stability
   and guarantees precise reproducibility.
   The "tulip" design of open-ended slits
   in other loops causes internal stress
   with repeated heating, deformation in
   shape, and changes in take-up capacity.

2. No transformation temperature affects
   the pure platinum of Takatsy loops and
   no growth changes can take place, as
   with stainless steel or other binary ma-
   terials sensitive to heat treatment.

3. Flaming, the only absolutely certain
   sterilizing method, will change the cali-
   bration of stainless steel but not of
   platinum loops.

4. Proof of the unvarying precision and
   durability of platinum Takatsy loops is
   that no blotter testing of take-up ca-
   pacity is ever required.

NEW LABORATORY EQUIPMENT PRODUCTS DESIGNED “IN-THE-LAB” BY MICROBIOLOGICAL ASSOCIATES. EACH ONE IS A “PROBLEM SOLVER.”

MA TUBE HANDLING SYSTEM: Simplifies planting and feeding of cell cultures . . . tubes stay in place even when rack is inverted . . . rack withstands oven sterilization . . . offers greater capacity . . . cover provides seal . . . eliminates need for tedious capping of individual tubes. MA FROZEN AMPULE STORAGE SYSTEM: Saves valuable space in liquid nitrogen storage units . . . provides quick-and-easy ampule retrieval. MA PETRI DISH TRAY: Designed to “nest” for easy handling of stacks of trays. MA ANIMAL CAGE RACK: Lightweight . . . rugged . . . adjustable shelf height . . . can be assembled or disassembled for storage (in its own shipping container) in minutes.

These four units were designed to solve some of the everyday problems encountered in our own laboratory . . . the same kind of problems found in research laboratories everywhere.

THE JOURNAL OF IMMUNOLOGY

Information for Subscribers

Published monthly, beginning January, 1929. (From 1916–1925, and in 1928 Volumes I–X inclusive, and Vol. XV published bi-monthly.)

The subscription price is $28.00 per year in U.S.A.; $29.25 in Canada; $30.00 elsewhere. Single copies, when available, are $2.75 in U.S.A.; $3.00 elsewhere. The subscriptions of members of the American Association of Immunologists are included in the membership dues and are handled by the Association's Treasurer, Dr. Sheldon Dray, American Association of Immunologists, 9650 Wisconsin Avenue, Bethesda, Md. 20014. All other subscriptions should be sent to the publishers.

Change of address: Publisher must be notified 60 days in advance. Journals undeliverable because of incorrect address will be destroyed. Duplicates can be obtained (if available) from the publisher at the regular price of single issues.

New subscriptions and renewals are entered to begin with the first volume of the year when subscription is received. Should any issue of the current volume be out of print at the time the subscription order is received, the pro-rata value of such numbers will be refunded to the subscriber.

Subscriptions should be renewed promptly: To avoid a break in your series, subscriptions should be renewed promptly. The publishers cannot guarantee to supply back issues on belated renewals.

Correspondence concerning all business matters should be addressed to

AGAROSE
SeaKem Brand Agarose
EXCLUSIVE DISTRIBUTOR
BAUSCH & LOMB

Manufactured by Marine Colloid, Inc., distributed exclusively through Bausch & Lomb in the laboratory and clinical fields. Agarose, strongly-gelling Agar extract (powder form), non-ionic, with minimal absorption and electroendosmosis, is supplied in standard units of 25, 100 and 250 grams. Larger quantities available on request.

For information about Spectrophor I... the Bausch & Lomb electrophoresis equipment, write for Catalog 34-2138. Bausch & Lomb, 22034 Bausch Street, Rochester, N.Y. 14602.

The finest agar available anywhere.
B-B-L Reagents for fluorescent antibody techniques

REAGENTS FOR FLUORESCENT TREPONEMAL ANTIBODY TEST
- Treponema pallidum (Nichols) Suspension, Desiccated
- Anti-Human Globulin, Fluorescein-Labeled, Desiccated
- Phosphate-Buffered Saline, pH 7.2, Powder
- FTA Standard Reactive Control Serum

REAGENTS FOR OTHER FLUORESCENT ANTIBODY TECHNIQUES
- Fluorescein Isothiocyanate
- Tetramethylrhodamine Isothiocyanate
- Anti-Rabbit Globulin
- Guinea Pig Liver Absorption Powder
- Rabbit Brain Absorption Powder
- Rabbit Liver Absorption Powder
- Mouse Liver Absorption Powder
- Bovine Albumin Rhodamine-Labeled Counterstain
- Rabbit Bone Marrow Powder
- Anti-Human Gamma Globulin, Fluorescein-Labeled
- Anti-Human Globulin, Rhodamine-Labeled
- Normal Mouse Brain Suspension, Sterile, Lyophilized
- Group A Streptococcus Test Reagent
- Group A Streptococcus Negative Control Reagent

focus on fluorescence

Microbiologists tell us that reactions are more sharply defined with B-B-L “performance-tested” reagents which make antigen-antibody reactions more clearly visible by fluorescence microscopy—with less nonspecific background interference.

Foremost in fluorescent antibody techniques, B-B-L was FIRST with chromatographically-pure labeling compounds FIRST with all reagents for the FTA test FIRST with high-quality fluorescein-labeled anti-rabies globulin.

*And now, FIRST AGAIN with lyophilized, Fluorescein-Labeled Test Reagent for Group A Streptococcus—a specific reagent designed for use in the one-step fluorescence-inhibition method.

Products of B-D LABORATORIES are available through your local distributor.

The American Society for Microbiology announces publication of

JOURNAL OF VIROLOGY

When the Journal of Bacteriology invited papers for its newly established Virology section, the response was overwhelming and impressive. The increasing number and outstanding quality of the articles submitted soon convinced the editors that a separate Virology journal was truly warranted. Thus the original idea of Journal of Virology was conceived.

Now the Journal of Virology is becoming a reality. Its purpose has been clearly defined—it will be "devoted to the advancement and dissemination of fundamental knowledge concerning viruses of bacteria, plants, and animals." Journal content will be drawn from original laboratory research in all areas of basic virology—biochemistry, biophysics, genetics, immunology, morphology, and physiology. Review papers and articles of a more applied nature will be excluded from the publication, but will continue to appear in the Society's Bacteriological Reviews and Applied Microbiology.

The Journal of Virology is indeed fortunate in having three distinguished virologists as its editors. Robert R. Wagner, M.D., Professor of Microbiology at the Johns Hopkins Medical School, is the Editor-in-Chief. Dr. Wagner is ably assisted by Norman P. Salzman, Ph.D., Chief of the Cell Biology Section of the National Institute of Allergy and Infectious Diseases, and Lloyd M. Kozloff, Ph.D., Professor of Microbiology, at the University of Colorado Medical Center in Denver.

The Journal will be published bimonthly, one volume a year, beginning in February, 1967. Subscription cost per year is $20.00 in the United States and overseas. There is no postage charge for subscriptions outside the U.S.A.

Note: ASM members should subscribe through the Society.

Recently, hematoporphyrin derivative (H.D.) has been reported to be an important agent in tumor detection.

By utilizing H.D. and a proper activating and viewing system, one can detect malignancy by fluorescence. Hematoporphyrin tends to accumulate in tumors (1) and its red fluorescence can be utilized in the delineation of neoplastic tissue. (2). Lipson, et al. have demonstrated that with a single intravenous dose of 0.05 mg/gm body weight of H.D., the tumor exhibited good differentiation within 3 hours after administration. They further report that the amount of H.D. required is well within the range of safety for the body. (3)

NBCo offers stat service on H.D. Phone collect 216-662-0212 (USA only). NBCo will process your order and guarantee shipment within 60 minutes of your call; one-day delivery anywhere in the continental USA, 80 hours anywhere in the world. Send for our free catalog containing more than 3000 items.
