the role of immunological factors in viral and oncogenic processes

7th Miles International Symposium

edited by ROLAND F. BEERS, JR., R. CARMICHAEL TILGHMAN, and EDWARD G. BASSETT

Experts from nine different countries here analyze the immunological factors associated with viral and oncogenic processes to foster a pluralistic approach to the attack against cancer. In their utilization of our knowledge of other cellular phenomena and disease processes, the studies are applicable to the treatment of allergies, multiple sclerosis, and arthritis as well as cancer. cellular modification and genetic transformation by exogenous nucleic acids

6th International Symposium on Molecular Biology

edited by ROLAND F. BEERS, JR. and R. CARMICHAEL TILGHMAN

These papers by scientists from various disciplines are divided into four categories: replication of nucleic acids and gene transfer by pseudovirins, the biology of R- and sex-factors in bacteria, reverse transcription, and human oncogenic viruses. Each of these areas is considered in terms of the biochemical events which follow the introduction of new material and the behavioral characteristics of the transformed cells. Supplement 2 of *The Johns Hopkins Medical Journal*. \$17.50
