Eliminate another variable from your experiment with

Endotoxin-Free Tissue Culture Media

•NEW
•GUARANTEED
•EXCLUSIVE

If you produce your own media—or purchase it from a supplier other than Microbiological Associates, endotoxins may very well be present in your media.

Endotoxin contamination of biological reagents has long been recognized—and most often ignored. However, there is increasing evidence that endotoxins can

elicit a variety of effects on the immune system as detected in both *in vivo* and *in vitro* assays.

All Microbiological Associates endotoxin free media (tested by our Limulus Amebocyte Lysate Kit, Cat. #50-500, 50-503) are available at our *standard catalog prices*. There is no extra cost for the extra protection.

Endotoxin-Free Media Now Available

PRODUCT	CATALOG NO.
MEM Earle's (1X)	12-125
MEM Hanks (1X)	12-127
MEM Dulbecco's	12-707
RPMI 1640	12-702
McCoy's 5A (Modified)	12-688
EBSS (1X)	10-502
HBSS (1X)	10-508
Hepes Buffer	17-737
Deionized Water	17-724
More to follow	

To obtain more information including references on endotoxin contamination and a description of our Quality Assurance protocol which *guarantees* you endotoxin-free media, please call or write:

THE JOURNAL OF IMMUNOLOGY®

INFORMATION FOR CONTRIBUTORS

Manuscripts should be sent to:

Dr. Joseph D. Feldman
 Department of Immunopathology
 Scripps Clinic and Research Foundation
 La Jolla, California 92037

If and when the manuscript is published, it will become the sole property of The Journal and all copyright will be taken out in the name of The Williams & Wilkins Company, and all rights in copyright reserved to The Williams & Wilkins Company.

Contributions may be short or long; the length should be commensurate with the scientific content. The chief criteria for acceptance are quality, originality, and clarity.

INSTRUCTIONS FOR PREPARATION OF MANUSCRIPT

The *original and two (2) copies* of the manuscript, including references, legends, figures and illustrations, must be submitted. The text and all other material, e.g., footnotes, references, and acknowledgments, must be typed in double space (at least $\frac{3}{16}$ -inch or 5-mm spacing from the bottom of one line to the top of a capital of a succeeding line) on one side of 8½ inch x 11 inch paper of good quality. The two (2) copies may be legible carbon or mimeographed copies or photocopies.

A short title to be used as a running head (not more than 50 characters) should be typed alone on the first page. Type the complete title on the second page, and the authors' full names (first name, middle initial(s), surname) and affiliations on the third page. *The format of The Journal must be followed in typing the text and the list of references.* References will be numbered as they appear in the text and will be listed in the format:

1. Kindt, T. J., and W. J. Mandy. 1972. Recombination of genes coding for constant and variable regions of immunoglobulin heavy chains. *J. Immunol.* 108:1110.

Only papers that have been accepted for publication should be listed in the references (i.e., articles that are already paginated or in press). Manuscripts in preparation, unpublished observations, and personal communications should be referred to as such in text; completed manuscripts that have been submitted for publication may be cited as a footnote to the text. If such information is in press when the author receives his galley proofs he may make appropriate citations in the text at that time.

All material to be set in a type size different from that of the text, such as tables, case histories, quotations, formulas, legends for figures and illustrations, footnotes, and references *must be typed on separate pages.* If abbreviations are to be used in the paper, the abbreviations and their meanings should be typed double spaced,

in one paragraph, on a separate sheet. Legends should not be attached to or written on figures or illustrations and must be typed double spaced. The position of tables and figures in the text may be indicated on the page margin.

List all components of culture medium used in experiments so that sufficient data to reproduce reported results are available. This information may be supplied in the Abbreviations footnote, in a table listing all components, by referring to a published article containing the information, or by identifying the commercial source which supplies the specific medium if components are listed by the supplier.

Illustrations and Photomicrographs. Photographs of figures and other illustrative material *must be on glossy paper (in triplicate)*; they must be clearly marked on the reverse side with the number, author's name, and orientation (top) and should be unmounted. Graphs should be in black ink on unlined or bluelined paper. If graphs exceed 9 x 12 inches in size, they must be accompanied by glossy photographic reproductions within that size.

For photomicrographs a better grade of paper may be used at additional cost, up to \$100.00 for a single page. Estimates can be obtained when the manuscript is submitted for publication. Estimates for color photomicrographs are also available.

Communications. Short papers, at the author's request, may be printed in the Communications section of The Journal. These papers should not exceed two (2) printed pages in length, including summary, references, tables and figures. The text of a full printed page contains about 1000 words. If accepted, their publication will be accelerated, usually within two (2) months of acceptance. For this reason, proofs are not sent to the authors, but rather to the Editor. Suitability for publication will be judged on the basis of timeliness, novelty, and importance by the usual refereeing procedure.

MANUSCRIPTS THAT DO NOT CONFORM TO THESE SPECIFICATIONS MAY NOT BE ACCEPTED, AT THE EDITOR'S DISCRETION.

Page Charges. Authors will be charged \$30.00 for each printed page of an article or a Communication. All manuscripts, if accepted, will be published only after commitment by the author(s) or financial officer of their institution to pay a charge of \$30.00 per published page. Under exceptional circumstances, page charges will be waived if deemed appropriate by an adjudicating member of the Editorial Board.

Reprints. Reprints must be ordered in advance. A form showing the cost of reprints, together with an order slip, is sent with the galley proof. No more than 1000 reprints of any article may be purchased. The invoice for reprints will include the charges for pages.

THE JOURNAL OF IMMUNOLOGY®

Information for Subscribers

Published monthly, beginning January, 1929. (From 1916 to 1925, and in 1928 Volumes I-X inclusive, and Vol. XV published bi-monthly.)

Annual Subscription Rates—U.S.A. AND POSSESSIONS: personal, \$80.00; institutional, \$100.00; single copy, \$9.00. FOREIGN: personal, \$85.00; institutional, \$105.00; single copy, \$9.50. Institutional (multiple reader) rate applies to libraries, schools, hospitals, clinics, group practices, and federal, commercial, and private institutions and organizations. A special rate of \$27.00 (\$32.00 foreign) is available to Students and Post-Doctoral Fellows. Certification forms may be obtained from the office of the American Association of Immunologists in Bethesda. The subscriptions of members of the American Association of Immunologists are included in the membership dues and are handled by the Association's Treasurer. Dr. Henry Metzger, American Association of Immunologists, 9650 Rockville Pike, Bethesda, Md. 20014. All other subscriptions should be sent to the publishers.

Change of address: Publisher must be notified 60 days in advance. Journals undeliverable because of incorrect address will be destroyed. Duplicates can be obtained (if available) from the publisher at the regular price of single issues.

New subscriptions and renewals are entered to begin with the January or July issue.

Subscriptions should be renewed promptly: To avoid a break in your series, subscriptions should be renewed promptly. The publishers cannot guarantee to supply back issues on belated renewals.

Microfilm. For availability, inquire of The Williams & Wilkins Company.

Reprints of individual articles are available *only* from authors.

Advances in Pathobiology

Edited by Donald West King, M.D.

Covering a broad range of subjects in biology and medicine, this timely series emphasizes advances in special aspects of investigative science and their applications. The volumes are based on seminars from the Given Institute of Pathobiology, Aspen, Colorado.

Vol. 6, just published—

CANCER BIOLOGY, IV:**Differentiation and Carcinogenesis**

Edited by Carmia Borek, Ph.D.,
Cecilia M. Fenoglio, M.D., D. W. King, M.D.

FROM THE INTRODUCTION: "Developmental biology—with its central issue, cellular differentiation—has emerged within recent years as a field upon which many disciplines have converged. It has profited greatly from new knowledge and technics in rapidly advancing areas such as cellular and molecular biology and genetics. The study of differentiation consists now of a collection of related problems approached from different angles in a variety of biologic systems. Closely linked to the exploration of controls in normal growth is the pursuit of the mechanisms underlying neoplastic conversion.

"The present symposium has been organized with an attempt to focus on some of the key problems and approaches in the areas of cellular differentiation and neoplasia by bringing together investigators from diverse but closely allied areas. In a series of workshops, some of the advanced technics used in cellular and molecular biology and genetics . . . are also presented in this volume."

(340 pp, illus, \$24.50. All orders are "on approval")

ALSO AVAILABLE

VOL. 1. Cell Membranes—Structure, Receptors, Transport: Fenoglio, Borek, King, Eds. (1975: 96 pp, \$7.95) . . . VOL. 2. SPECIAL LIMITED OFFER

Until October 30, 1977, purchasers of Volume 6 at the full price may order any or all of the preceding Vols. 1-5 at a 30% discount from the listed price (tables of contents available on request). This offer applies only to purchasers of Vol. 6, and only so long as requested volumes remain in stock.

CONTENTS—VOLUME 6

- Somatic Cell Genetics in Problems Related to Differentiation, *Theodore T. Puck*
Cell Surface Modulation, *Gerald M. Edelman*
Molecular Features of Integral Membrane Proteins of the Human Red Cell Membrane, *V. T. Marchesi*
Studies on the Mechanism of Embryonic Cell Recognition, *A. A. Moscona et al.*
Evolution of Multigene Families, *L. Hood*
Tumor-Specific Transplantation Antigens of Chemically Induced Tumors, *E. S. Lenox and K. Sikora*
Effects of Steroid Hormone Receptors on Gene Transcription, *Bert W. O'Malley et al.*
Maternal Contributions to Embryogenesis in *Drosophila*, *Ching-Hung Kuo and Alan Garen*
Differentiation of Cartilage, *Albert Dorfman et al.*
Control of Cell Differentiation in Normal Hematopoietic and Leukemic Cells, *Leo Sachs*
Neoplastic Stem Cells, *G. Barry Pierce*
Malignancy vs. Normal Differentiation of Stem Cells as Analyzed in Genetically Mosaic Animals, *Beatrice Mintz*
Theory of Mass Transport and Ligand Binding for Macromolecular Interactions Induced by Small Molecules, *John R. Cann*
Allosteric Mechanics, *Walter B. Goad*
Control of Cell Shape by Adenosine 3' : 5'-Phosphate in Chinese Hamster Ovary Cells: Studies of Cyclic Nucleotide Analogue Action, Protein Kinase Activation, and Microtubule Organization, *Abraham W. Hsie et al.*
Cell Killing by Viruses—Single-Cell Survival Procedure for Detecting Viral Functions Required for Cell Killing, *Philip I. Marcus*
Studies on Infants and Children with Sex Chromosomal Abnormalities, *Arthur Robinson*
Growth of HeLa Cells in a Serum-Free Hormone-Supplemented Medium, *Gordon H. Sato*
The Human Environment—a new publication, *C. A. Thomas, Jr.*

LABORATORY WORKSHOPS

- Synthesis and Applications of Complementary DNA, *John M. Taylor, et al.*
Cell Fusion, *Guido Pontecorvo et al.*
An Introduction to Affinity Chromatography, *Indu Parikh and Susan F. Slovin*
Immunohistologic Technics, *Stewart Sell et al.*
Introduction . . . Fluorescent Antibody Methods for Labeling of Intracellular and Cell Surface Substances . . . Current Methods for Immunologic Staining with Peroxidase-Labeled Antibodies . . . Labeling of Lymphocyte Surface Immunoglobulin Using Immunoelectronmicroscopic Markers . . . Autoradiography
Molecular Cloning, *Dean H. Hamer and Charles A. Thomas, Jr.*

STRATTON INTERCONTINENTAL MEDICAL BOOK CORP.

Announcing publication
of *the* indispensable laboratory manual —

MANUAL OF CLINICAL IMMUNOLOGY

Edited by Noel R. Rose and Herman Friedman

A joint effort by members of the
American Society for Microbiology and
the American Association of Immunologists

This definitive and much needed new book is a companion volume to the highly acclaimed *Manual of Clinical Microbiology*, 2nd Edition. It has been written to provide a current, comprehensive, and definitive source of information about the best methods for conducting specific immunological tests in laboratory immunology. It will be invaluable for:

laboratory directors and technologists responsible for the performance of immunological tests in the clinical laboratory - graduate students - medical students - medical technology students - post-doctoral trainees - residents - fellows - clinicians

In addition, it will be an essential addition to the working library of every clinical chemistry laboratory, blood bank, and hematology laboratory. It also belongs in laboratories involved in the diagnosis of autoimmune and collagen diseases, surgical laboratories doing tissue and organ transplantation, and laboratories involved with cancer immunology.

It deals exclusively with the applications of immunology to the detection and analysis of a

wide variety of diseases, including, but not limited to, those induced by microorganisms. The clinical interpretations of each procedure are detailed, and pitfalls and problems in performing the various analyses are discussed.

The contents, by section, are:

- Tests for humoral components of the immunological response
- Tests for cellular components of the immunological response
- Immunoassays
- Bacterial, mycotic, and parasitic immunology
- Viral, rickettsial, and chlamydial immunology
- Immunohematology
- Laboratory examination of patients with allergic and immunodeficiency diseases
- Autoimmune diseases
- Tumor immunology
- Transplantation immunology
- Licensure and certification programs in clinical immunology laboratories

Publication date: 16 August, 1976. 923 pages, fully illustrated.

Available in two bindings:

Cloth, at \$20.00 (ISBN: 0-914826-09-3) and durable, plastic-coated, flexible binding, ideal for bench or classroom use, at \$16.00 (ISBN: 0-914826-10-7).

Special Offer to Members of the American Association of Immunologists

Note: Members of AAI may purchase this book at the special member discount prices of:

Clothbound: \$12.00 + \$1.00 handling charge

Flexible: \$10.00 + \$1.00 handling charge

Member purchases are for personal use only. Payment *must* accompany member orders. AAI members should send their orders, accompanied by remittance in U.S. Dollars, to the American Association of Immunologists, 9650 Rockville Pike, Bethesda, MD 20014.

CONTEMPORARY TOPICS IN IMMUNOBIOLOGY

General Editor: **M. G. Hanna, Jr.**, Frederick Cancer Research Center

Editorial board: **Max D. Cooper, A. J. S. Davies, John J. Marchalonis, Victor Nussenzweig, George W. Santos,**

Osias Stutman, Noel L. Warner, William O. Weigle.

"... an extremely useful and important series. . . . The individual contributions provide a concise summary of the work and outlook of the authors and the relation of their results to the prevalent theories in the field . . . fascinating and very stimulating . . . a great service to all workers in the field of immunology."—**P. Kallós**, *International Archives of Allergy and Applied Immunology*

Contemporary Topics in Immunobiology provides a continuing source for immunologists focusing on an investigator's or group's collective research work in an area that has become one of the principal research vehicles in the study of cellular immunology, cancer, and transplantation.

Volume 7: T Cells

edited by **Osias Stutman**, Sloan-Kettering Institute for Cancer Research

CONTENTS: Two main features of T-cell development: thymus traffic and post-thymic maturation, *O. Stutman*. Regulation of the immune response by T-cell subclasses, *H. Cantor and E. Boyse*. Antigen receptors of T helper cells, *K. Rajewsky and K. Eichmann*. Antigen-binding, idiotypic T-lymphocyte receptors, *H. Binz and H. Wigzell*. Major transplantation antigens, viruses, and specificity of surveillance T cells, *R. M. Zinkernagel and P. C. Doherty*. Significance of the major histocompatibility complex as assessed by T-cell-mediated lympholysis involving synergetic stimulating cells, *G. M. Shearer, A. Schmitt-Verhulst, and T. G. Rehn*. T-cell-mediated cytotoxicity: an overview of some current issues, *C. S. Henney*. Mechanism of T-cell-mediated cytotoxicity: the lethal hit stage, *P. Golstein and E. T. Smith*. Mechanism of specific tumor-cell lysis by alloimmune T lymphocytes: resolution and characterization of discrete steps in the cellular interaction, *E. Martz*. Functional analysis of distinct human T-cell subsets bearing unique differentiation antigens, *L. Chess and S. F. Schossman*. 386 pp., illus., \$35.00

Volume 6: Immunobiology of Oncogenic Viruses

edited by **M. G. Hanna, Jr.**, Frederick Cancer Research Center
and **Fred Rapp**, The Pennsylvania State University College of Medicine

CONTENTS: Comparative immunology of carcinogenesis by DNA viruses, *S. S. Tevethia and F. Rapp*. Immunity to leukemia, lymphoma, and fibrosarcoma in cats: a case for immunosurveillance, *M. Essex*. Intracellular and systemic regulation of biologically distinguishable endogenous type C RNA viruses of mouse cells, *S. A. Aaronson and J. R. Stephenson*. Mammalian C-type oncornaviruses: relationships between viral structural and cell-surface antigens and their possible significance in immunological defense mechanisms, *W. Schäfer and D. P. Bolognesi*. Natural immunity to endogenous oncornaviruses in mice, *J. N. Ihle and M. G. Hanna, Jr.* Biological and structural pleomorphism of the oncornavirus envelope glycoprotein, gp70, *B. C. Del Villano, S. J. Kennel, and R. A. Lerner*. Autoimmunity, oncornaviruses, and lymphomagenesis, *M. S. Hirsch, M. R. Proffitt, and P. H. Black*. Natural immunity to murine mammary tumor viruses, *P. Bentvelzen and P. C. Creemers*. Immunogenicity and MuMTV-like antigenicity of human breast cancer tissues, *M. M. Black*. Clinical implications of immunity to oncogenic viruses, *P. H. Levine*. 289 pp., illus., \$27.50

Volume 5

edited by **William O. Weigle**, Scripps Clinic and Research Foundation

CONTENTS: Subpopulations of B lymphocytes: physical separation of functionally distinct stages of B-cell differentiation, *K. Shortman, J. M. Fidler, R. A. Schlegel, G.J.V. Nossal, M. Howard, J. Lipp, and H. von Boehmer*. The function of macrophages in T-lymphocyte antigen recognition, *A. S. Rosenthal and E. M. Schevach*. Regulation of immune responses by suppressor T cells, *C. W. Pierce and J. A. Kapp*. Generation of cytolytic T lymphocytes *in vitro*, *H. D. Engers and H. R. MacDonald*. Pathways to immunological tolerance: an approach through the study of maturing B lymphocytes, *J. W. Stocker and G.J.V. Nossal*. Tolerance to contact hypersensitivity, *H. N. Claman and J. W. Moorhead*. Role of lymphocytes in cellular resistance to infection, *D. D. MacGregor and A. A. I. Kostiala*. Structure and function of β_2 microglobulin, *R. T. Kubo and H. M. Grey*. An attempt at an interpretation of the mouse H-2 complex, *J. Klein*. 341 pp., illus., \$29.50

Volume 4: Invertebrate Immunology

edited by **E. L. Cooper**
University of California, Los Angeles
299 pp., illus., \$19.50

Volume 2: Thymus Dependency

edited by **A. J. S. Davies** and **R. L. Carter**
Institute of Cancer Research, England
368 pp., illus., \$26.00

Volume 3

edited by **Max D. Cooper**
University of Alabama
and **Noel L. Warner**
The Walter and Eliza Hall Institute, Australia
267 pp., illus., \$19.50

Volume 1

edited by **M. G. Hanna, Jr.**
