METRIZAMIDE

Metrizamide is a non-ionic compound for density gradient centrifugation experiments. It is inert and forms solutions which, while much denser than can be obtained with sucrose, have relatively low viscosity and osmolarity.

Metrizamide is non-toxic to cells. Metrizamide has proved most useful in the fractionation of nucleic acids, nucleoproteins, most subcellular particles and organelles as well as cells and viruses (Rickwood, D. & Birnie, G.D.:FEBS letters,50,2(1975)102).

Now available in two purification grades.

1 Metrizamide C Grade AN6400.

Centrifugation Grade with a lower price. The cost per gradient is similar to that of other high quality density gradient media.

2 Metrizamide A Grade AN6300.

Analytical Grade for experiments that require ultrapure material.

1978

COPYRIGHT © 1978 BY THE WILLIAMS & WILKINS COMPANY

THE JOURNAL OF IMMUNOLOGY®

INFORMATION FOR CONTRIBUTORS

Manuscripts should be sent to:

Dr. Joseph D. Feldman
Department of Immunopathology
Scripps Clinic and Research Foundation
La Jolla, California 92037

If and when the manuscript is published, it will become the sole property of The Journal and all copyright will be taken out in the name of The Williams & Wilkins Company, and all rights in copyright reserved to The Williams & Wilkins Company.

Contributions may be short or long; the length should be commensurate with the scientific content. The chief criteria for acceptance are quality, originality, and clarity.

INSTRUCTIONS FOR PREPARATION OF MANUSCRIPT

The *original and two (2) copies* of the manuscript, including references, legends, figures and illustrations, must be submitted. The text and all other material, e.g., footnotes, references, and acknowledgments, must be typed in double space (at least $\frac{3}{16}$ -inch or 5-mm spacing from the bottom of one line to the top of a capital of a succeeding line) on one side of 8½ inch x 11 inch paper of good quality. The two (2) copies may be legible carbon or mimeographed copies or photocopies.

A short title to be used as a running head (not more than 50 characters) should be typed alone on the first page. Type the complete title on the second page, and the authors' full names (first name, middle initial(s), surname) and affiliations on the third page. *The format of The Journal must be followed in typing the text and the list of references.* References will be numbered as they appear in the text and will be listed in the format:

1. Kindt, T. J., and W. J. Mandy. 1972. Recombination of genes coding for constant and variable regions of immunoglobulin heavy chains. *J. Immunol.* 108:1110.

Only papers that have been accepted for publication should be listed in the references (i.e., articles that are already paginated or in press). Manuscripts in preparation, unpublished observations, and personal communications should be referred to as such in text; completed manuscripts that have been submitted for publication may be cited as a footnote to the text. If such information is in press when the author receives his galley proofs he may make appropriate citations in the text at that time.

All material to be set in a type size different from that of the text, such as tables, case histories, quotations, formulas, legends for figures and illustrations, footnotes, and references *must be typed on separate pages*. If abbreviations are to be used in the paper, the abbreviations and their meanings should be typed double spaced,

in one paragraph, on a separate sheet. Legends should not be attached to or written on figures or illustrations and must be typed double spaced. The position of tables and figures in the text may be indicated on the page margin.

List all components of culture medium used in experiments so that sufficient data to reproduce reported results are available. This information may be supplied in the Abbreviations footnote, in a table listing all components, by referring to a published article containing the information, or by identifying the commercial source which supplies the specific medium if components are listed by the supplier.

Illustrations and Photomicrographs. Photographs of figures and other illustrative material *must be on glossy paper (in triplicate)*; they must be clearly marked on the reverse side with the number, author's name, and orientation (top) and should be unmounted. Graphs should be in black ink on unlined or bluelined paper. If graphs exceed 9 x 12 inches in size, they must be accompanied by glossy photographic reproductions within that size.

For photomicrographs a better grade of paper may be used at additional cost, up to \$100.00 for a single page. Estimates can be obtained when the manuscript is submitted for publication. Estimates for color photomicrographs are also available.

Communications. Short papers, at the author's request, may be printed in the Communications section of The Journal. These papers should not exceed two (2) printed pages in length, including summary, references, tables and figures. The text of a full printed page contains about 1000 words. If accepted, their publication will be accelerated, usually within two (2) months of acceptance. For this reason, proofs are not sent to the authors, but rather to the Editor. Suitability for publication will be judged on the basis of timeliness, novelty, and importance by the usual refereeing procedure.

MANUSCRIPTS THAT DO NOT CONFORM TO THESE SPECIFICATIONS MAY NOT BE ACCEPTED, AT THE EDITOR'S DISCRETION.

Page Charges. Authors will be charged \$30.00 for each printed page of an article or a Communication. All manuscripts, if accepted, will be published only after commitment by the author(s) or financial officer of their institution to pay a charge of \$30.00 per published page. Under exceptional circumstances, page charges will be waived if deemed appropriate by an adjudicating member of the Editorial Board.

Reprints. Reprints must be ordered in advance. A form showing the cost of reprints, together with an order slip, is sent with the galley proof. No more than 1000 reprints of any article may be purchased. The invoice for reprints will include the charges for pages.

Information for Subscribers

Published monthly, beginning January, 1929. (From 1916 to 1925, and in 1928 Volumes I-X inclusive, and Vol. XV published bi-monthly.)

Annual Subscription Rates—U.S.A. AND POSSESSIONS: personal, \$80.00; institutional, \$100.00; single copy, \$9.00. FOREIGN: personal, \$90.00; institutional, \$110.00; single copy, \$10.00. Institutional (multiple reader) rate applies to libraries, schools, hospitals, clinics, group practices, and federal, commercial, and private institutions and organizations. A special rate of \$27.00 (\$37.00 foreign) is available to Students and Post-Doctoral Fellows. Certification forms may be obtained from the office of the American Association of Immunologists in Bethesda. The subscriptions of members of the American Association of Immunologists are included in the membership dues and are handled by the Association's Treasurer. Dr. Henry Metzger, American Association of Immunologists, 9650 Rockville Pike, Bethesda, Md. 20014. All other subscriptions should be sent to the publishers.

Change of address: Publisher must be notified 60 days in advance. Journals undeliverable because of incorrect address will be destroyed. Duplicates can be obtained (if available) from the publisher at the regular price of single issues.

New subscriptions and renewals are entered to begin with the January or July issue.

Subscriptions should be renewed promptly: To avoid a break in your series, subscriptions should be renewed promptly. The publishers cannot guarantee to supply back issues on belated renewals.

Microfilm. For availability, inquire of The Williams & Wilkins Company.

Reprints of individual articles are available *only* from authors.

INTERNATIONAL SYMPOSIUM

The Mast Cell -its Role in Health and Disease

(Chairman – Professor J Pepys)

Time: Mid 1979.

Venue: To be determined.

A symposium will take place to review current knowledge of the mast cell and drugs that affect it. Sessions will be included on the biochemistry and pharmacology of the mast cell and clinical aspects of its pathology in all organ systems. Drugs which affect the mast cell in the clinical management of various diseases will be discussed.

Contributors with relevant work are invited to submit abstracts, in one of the four languages of the symposium – English, French, German and Spanish, to Dr. A M Edwards, Fisons Ltd., Research & Development Laboratories, Bakewell Road, Loughborough, Leicestershire, England, by 30th November 1978. Simultaneous translation will be available at the symposium.

Delegates wishing to attend this symposium should contact Dr. Edwards at this address.

Current Topics in Microbiology and Immunology

Volume 81

Lymphocyte Hybridomas

Edited by F. Melchers, M. Potter and R. N. Warner

Sponsored by the National Cancer Institute,
3-5 April, 1978.

1978. approx. 260p. approx. 85 illus. 66 tables.
cloth \$24.00

ISBN 0-387-08810-5

Plasma cell-plasmacytoma hybrids are a unique source of homogeneous antibodies with extraordinary specificity. Since the original discovery by Köhler and Milstein, many laboratories have become actively engaged in making lymphocyte hybrids of normal and malignant cells, mainly to produce homogeneous antibodies specific for a wide variety of interesting antigens. In addition, these hybrids have become useful as models for studying T-cell functions and lymphocyte growth regulation and differentiation, as a means for studying the location of genes expressed in lymphocytes, immunoglobulins, and for the study of the biochemical basis of neoplastic change.

The second workshop on "Functional Properties of Tumors of T- and B-Lymphocytes" was held in April, 1978 at the National Institute of Health, Bethesda, Maryland, bringing together the world's leading experts in this field. This book publishes the proceedings of that workshop and represents an impressive summary of the scientific progress and the technical know-how of many laboratories working on lymphocyte fusions, a technique which is currently gaining wide interest in immunology, molecular and cellular biology, biochemistry and medical research.
