On the cover: Resolution of inflammation by a naturally occurring endogenous lipid mediator, Resolvin E1, results in complete regeneration of pathologically lost tissues, including bone. Regeneration of tissues lost to disease is problematic in many human diseases, such as arthritis and periodontitis. Resolvin E1 promotes regeneration of the periodontal organ (periodontal ligament, cementum, and bone) as shown. Hasturk, H., A. Kantarci, E. Goguet-Surmenian, A. Blackwood, C. Andry, C. N. Serhan, and T. E. Van Dyke. 2007. Resolvin E1 regulates inflammation at the cellular and tissue level and restores tissue homeostasis in vivo. J. Immunol. 179: 7021–7029.
