Life. Enhanced.

New Breakthroughs, New Opportunities.

Bristol-Myers Squibb has the following positions available in central New Jersey:

Research Scientist # 24528

Position Description: In Vivo Pharmacology who will be responsible for independently developing and performing studies in animal models of inflammation and immune regulation. The major focus of this position will be the in vivo evaluation of novel therapeutic agents that will support the drug discovery efforts of the entire therapeutic area.

Position Requirements: B.Sc. or M.Sc. in the Biological Sciences with a minimum of 5 years experience, preferably within the Pharmaceutical Biotechnology sector. Knowledge of the Immunology Inflammation therapeutic area with a strong in vivo background is essential. Additional skills include knowledge of cell culture, flow cytometry and in vitro ex vivo assays for the analysis of inflammatory parameters.

Research Scientist #24781

Position Description: Designing and conducting biochemical and cell based assays for the evaluation of targets in the areas of immunology and inflammation. The qualified candidate will contribute to the development and execution of various in vitro assays with emphasis on T cell biology and antigen presentation.

Position Requirements: Scientist with a BS or MS in the areas of Immunology, Cell Biology, Biochemistry or a related field, with a minimum of 5 years postgraduate work experience. This position requires knowledge of cellular immunology and extensive experience with functional cell based assays such as T cell proliferation and differentiation, cytokine measurements, FACS, and cellular signaling using appropriate biochemical and pharmacological techniques.

Research Scientist #24785

Position Description: Cellular immunologist who will be responsible for designing and conducting in vitro and ex vivo assays for the evaluation of targets in the areas of immunology and inflammation. The successful candidate will need to work independently and possess the ability to develop, execute, interpret and troubleshoot biochemical and cell based assays.

Position Requirements: Scientist with a BS or MS in the areas of Immunology, Cell Biology, Biochemistry or a related field, with a minimum of 8-10 years of postgraduate work experience. This position requires knowledge of cellular immunology especially in the area of T cell biology. The ideal candidate will have experience with primary cell isolation from rodents and ex vivo functional cell based assays such as cytokine measurement, cell phenotyping and or receptor binding and occupancy assays using appropriate biochemical techniques.

Research Investigator #24784

Position Description: Responsible for running an independent program in the areas of immunology and inflammation. This includes designing and conducting cell based assays for the evaluation of targets in the area of T cell immunology. This individual will work independently and provide guidance in the design, execution and interpretation of biochemical and cellular assays. Other responsibilities include working closely with other scientists within a drug discovery team and coordinating studies with several different functional groups.

Position Requirements: Ph.D. level scientist within the area of Cellular Immunology or a related field, with 3-5 years of postgraduate work experience. Knowledge of cellular immunology including, but not restricted to primary T cell activation and proliferation in the context of antigen presentation is a must. Familiarity with human T cell differentiation and effector function would be an advantage. This position requires extensive experience with functional cell based assays such as T cell differentiation, proliferation, cytokine measurements, receptor binding and occupancy, and cellular signaling using appropriate biochemical and pharmacological techniques.

Bristol-Myers Squibb

Dedicated to Discovery... Committed to Care.

RESEARCH FELLOW

Dana-Farber Cancer Institute, Department of Cancer Immunology & AIDS, is seeking a Research Fellow to join a dynamic research team engaged in studying lentiviral pathogenesis and host immunity using primate models. We seek to develop a live attenuated oral bacterial vector to target the mucosal immune system in a novel approach to develop an AIDS vaccine. The position offers training in primate immunology, lentivirology, and vaccine development. Ph.D. or equivalent doctorate in the field of cellular immunology is required; a virology background is a plus. The position involves a joint appointment at Harvard Medical School and the Dana-Farber Cancer Institute. Interested candidates may send their CV and the names of three references by e-mail to:

Dr. Ruth Ruprecht
Dana-Farber Cancer Institute
44 Binney Street
Boston, MA 02115
e-mail: ruprecht_lab@dfci.harvard.edu
