### STAFF SCIENTIST

Bayer Diabetes Care offers a variety of products, services and support to people living with diabetes, and is one of the largest producers of blood glucose monitors in the world, supporting customers in 100 countries. Bayer Diabetes Care is committed to being the industry's leader and has had great success towards that goal through the talent and passion of its people.

We currently are searching for a Staff Scientist. This individual will function as a product development scientist who can serve both as a technical and people leader. Serving as a team member in large scale development projects or a team leader in element teams, this individual will contribute to developing new products as well as improving existing products for our global diabetes testing market. Such responsibilities require creativity and discipline in biosensor development to address an international market for increasingly sophisticated products that offer high performance and low cost. This scientist must balance conflicting cost, quality and schedule demands, which require excellent technical leadership and personal interaction skills. The successful candidate will serve several roles, including:

- leading and organizing task-force teams to resolve roadblock problems during product development
- serving as the immunoassay expert in the group
- maintaining effective communication and cooperation with groups within the R&D organization as well as manufacturing, QA, clinical trials, regulatory and marketing
- playing a critical role in external technology assessment for future product applications
- driving the discovery and application of new immuno-sensor/biosensor technologies, sensor processes and product development approaches
- builds technical strength in immunoassays, such as Hemoglobin A1C assay, in the department by training and developing other scientists

The position requirements include a Ph.D in Immunochemistry related sciences and at least 6+ years of industrial experience. Of those, 3+ years of experience as a technical leader in product and process development for complex medical devices or systems is required. Experience with immunoassays, such as Hemoglobin A1C and lateral-flow tests, and related processing technologies are highly preferred. Experience in biosensors, such as glucose sensors and related processing technology is a plus. This person must have effective communication and presentation skills.

This position is located in Mishawaka, Indiana. We offer a very reasonable cost of living and quality of environment and are conveniently located within 90 miles of Chicago in Northern Indiana. Interested and qualified candidates should submit their resumes/c.v.'s online to: Bayerjobs.com. Search for position #4821 and apply now to be considered further for this unique opportunity.
