On the cover: Immunohistochemistry with T cell-specific CD3 Ab (brown) showing infiltration of a hair follicle in skin from a retrogenic mouse whose T cells exclusively express the 1MOG244.1 TCR. Mice expressing this TCR develop spontaneous alopecia areata leading to alopecia universalis. The TCR recognizes an undetermined class I-restricted Ag. *Alli, R., P. Nguyen, K. Boyd, J. P. Sundberg, and T. L. Geiger*. 2012. A mouse model of clonal CD8⁺ T lymphocyte-mediated alopecia areata progressing to alopecia universalis. *J. Immunol.* 188: 477–486.
