On the cover: Whole mount preparation of alopecic murine epidermis. Alopecic epidermis exhibits increased proliferation (detected by Ki67 labeling, red), hair follicle swelling, and increased expression of cell adhesion molecule 1 (Cadm1, green). Cadm1 mediates heterotypic adhesion to lymphocytes expressing class 1-restricted T cell-associated molecule, which contributes to hair follicle destruction. Giangreco, A., E. Hoste, Y. Takai, I. Rosewell, and F. M. Watt. 2012. Epidermal Cadm1 expression promotes autoimmune alopecia via enhanced T cell adhesion and cytotoxicity. *J. Immunol.* 188: 1514–1522.
