On the cover: Morphologically diverse natural microflora (*middle*) bound to the vaginal mucosa of 17 β -estradiol-treated female mice chronically colonized with group B streptococcus. The interlacing network of microridges and vaginal rugae, abundant during estrus, is shown (*right*). Fine filaments, of unknown origin, are shown between the microbial cells and the mucosal surface. Carey, A. J., C. K. Tan, S. Mirza, H. Irving-Rodgers, R. I. Webb, A. Lam, and G. C. Ulett. 2014. Infection and cellular defense dynamics in a novel 17 β -estradiol murine model of chronic human group B streptococcus genital tract colonization reveal a role for hemolysin in persistence and neutrophil accumulation. *J.
