On the cover: Morphodynamic mapping of protrusion edge velocities was performed in a RAW/LR5 macrophage stably expressing the inducible Rac2 biosensor. The map shown describes the edge velocity, where warmer colors indicate protrusion and colder colors indicate retraction. Additional processing with Rac2 activity data yields cross-correlation functions, characterizing the spatiotemporal coupling of the two parameters. Miskolci, V., B. Wu, Y. Moshfegh, D. Cox, and L. Hodgson. 2016. Optical tools to study the isoform-specific roles of small GTPases in immune cells. *J. Immunol.* 196: 3479–3493.
