- 4189 Monocyte-Derived Dendritic Cells: A Transendothelial Trip Launches the Quest To Understand Heterogeneity in the APC Family  
*Gabrielle T. Belz*

On the cover: Intracranial GL261 glioma tissues 4 d after intranasal infection of mice with an attenuated vaccine strain of rabies virus showing extensive accumulation of F4/80-positive macrophage/microglia (red) and iNOS expression (green) that is largely restricted to tumor cells. Nuclei are stained with DAPI (blue). Bongiorno, E. K., S. A. Garcia, S. Sauma, and D. C. Hooper. 2017. Type 1 immune mechanisms driven by the response to infection with attenuated rabies virus result in changes in the immune bias of the tumor microenvironment and necrosis of mouse GL261 brain tumors. *J. Immunol.* 198: 4513–4523.
